facing facts, they have been inclined—the failing is common to the whole East—to represent things as they wanted them to be, and to deceive themselves into believing that this Coué method would achieve the regeneration of Turkey. It was not to be expected that a country in the backward state in which the Republic found itself could be wholly set upon its feet within a few years; what was required was that sound foundations should be laid, in order that improvement should be real and steady, even though it had to be slow. The report of the Supreme Economic Council has rather brusquely torn aside the veil that had been thrown over the true state of affairs. The first concern of the Angora Government—on paper—was agriculture; every effort was to be made to increase the cultivated area—which in spite of Turkey's being primarily an agricultural State, was less than a fifth of the total area—and to improve the standard of agriculture. The country was to be divided into agricultural zones, each under a Director of Agriculture, seeds and machinery were to be supplied to peasants free of charge; agricultural schools were to give free instruction in the use of machinery and in modern methods of cultivation. In the light of what the Economic Council now records it has to be inferred that for the greater part these reforms have remained a dead letter. The scheme, on paper, was admirable; but it has not been possible to put it into practice. In a country where public opinion counted and the press was a factor in public affairs, the reason for this failure might be examined, and Turkey might hope to derive some benefit from the lesson. As things are, there is a risk that the damaging report will merely serve as a text for yet more reforms that experience so much difficulty in passing beyond the paper stage.

The first and foremost reform that Turkey needs to adopt is for the Government and the people to realize that criticism, whether it comes from Turks or foreigners, is not necessarily hostile, but can be of great help. The progress of the West that the Turkish President is endeavouring to introduce so rapidly into Turkey has not been the creation of one man or even of a few men in any one country; it is the product of many men's minds, the results of the pooling of many theories and experiments. Turkey, who is conscious of having lagged far behind other States, is now condemned to advance only as fast as one single man, the President, can push her; before a Minister acts, the Ghazi must speak first, and Parliament, chosen individually by him, exists only to give effect to his words. The handicap is too great for the country and imposes an unfair strain on the maker of modern Turkey. While his attention is occupied by social innovations, other reforms, perforce, have to wait. Behind the failure to give effect to the Ghazi's scheme for the improvement of agriculture lie the financial restrictions from which Turkey suffers. All that the Republic inherited in respect of the economic life of the country—its railways, ports and shipping services, its banking, insurance and general business—it owed to foreign capital and largely to foreign management. Taking over the administration, as it did, when Turkey was financially and materially exhausted by a long period of war, the Angora Government set about not only to drive away the foreign capital already in the country, but also to make it impossible for more to come in to finance its vast programme of reconstruction. Little wonder, therefore, that this programme should have been carried out only where the Government could scrape together a little money by not paying its foreign debts. This state of affairs could not last indefinitely. Turkey has now agreed to make a start next year in paying off some of her indebtedness. In the light of the Economic Council's report it is impossible that she should be able to do so, without a foreign loan, unless she abandons her programme of public works. To obtain a loan she will have to renounce the fiscal policy that she has hitherto adopted, and, when she does that, she will have confessed to the wasting of five valuable years in regard to what is, after all, the main duty of all Governments, the promotion of the material welfare of the country.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, November 1.

Croats and Serbs.

Despite many setbacks M. Milosh Savtchitch is continuing his examination of the possibilities of agreement between Belgrade and Zagreb. He has had further interviews with M. Davidovitch and M. Stanoyevitch, at which, it is understood, they answered in detail the many questions that he put to them during former conversations. It is reported, however, that M. Savtchitch has been asked not to go to Zagreb to communicate to the Croat leaders the results of his investigations, as the Zagreb leaders think that no good could come of this step. His activities are being held up for the time being by a journey into the interior, dictated by his private affairs.

The Zagreb leaders remain obdurate. They will propose no terms so long as the Skupshtina in which their comrades were slain continues to sit and to be led by virtually the same people as those in office at the time of the tragedy. At the great mass meeting of peasants and citizens, a Yugoslav Alba Julia, held nearly a fortnight ago at Sisak, they renewed their assertions that they will fight on until they achieve their aims—but, apart from a vague demand for what is variously styled "federation," "autonomy," "complete freedom," or "a personal union," it is not clear exactly what these aims are. A new note is, however, creeping into their speeches. M. Matchek, leader of the Croat Peasant Party, is reported to have said words to this effect at Sisak: "After June 20 the Skupshtina ceased to exist for us. There remained the King and the People. For four months we have watched and waited, but the King has made no move. Now there remains only the people." Taken into conjunction with the campaign in the Zagreb Press for the King's intervention, this is interpreted merely as an attempt to intimidate the King into taking action favourable to them by threats that, otherwise, they will return to their old republican slogan. As the King as a constitutional monarch cannot openly take any such action, it is obvious that such tactics can only serve to make the situation more difficult and to put weapons into the hands of the Belgrade die-hards, who are always seeking some new way to discredit the Croat cause.

There is, indeed, a growing division among the members of the Four-Party Coalition as to the policy to be pursued towards the Zagreb opposition. The Voukitchevitch group of Radicals, at present in the ascendant, backed by some of the Democrats and Muslims, wishes to take a strong line. M. Mihailovitch, one of their number, recently elected as President of the Skupshtina, declares that he will insist on the strict application of certain regulations which enable him to refuse to pay their salaries to M.P.'s who do not regularly attend the meetings of Parliament, and that he will apply this to the abstaining members of the Opposition. It is said, too, that this group demands the trial of M. Pernar and Mme. Stepan Raditch for certain articles published in *Narodni Val*, which are said to constitute *lèse majesté*, and insists that strong

measures should be taken against the other Zagreb leaders under the Defence of the Realm Act. Since Dr. Koroshetz, who recognises that he was made Premier in order to try to obtain a reconciliation between Belgrade and Zagreb, refuses to take any such action, unless it becomes absolutely essential for the protection of the State, it is believed that attempts will be made to deprive him first of the office of Minister of Interior and later of that of Premier.

On the other hand the Radicals following M. Aca Stanoyevitch, some of the Democrats including, it is said, M. Milan Grol, Minister for Education, and a few Muslims believe that the present Government is not conciliatory enough and desire changes which would make it more so and enable relations with Zagreb to be renewed. This group, if group is not too definite a word for so vague a movement, realise that the first real step towards agreement must be the dissolution of this "blood-stained" Parliament and the election of a new Assembly. This would enable the Zagreb parties to be represented again in Belgrade, and negotiations for the settlement of the very detrimental situation to be begun. They are strongly opposed to the suggestion of M. Mihailovitch that the salaries of abstaining Members should be withheld, since they maintain the clause in question was intended for the punishment of members who abstain from laziness and not for those who deliberately abstained as a protest and whose abstention was approved by the electors who sent them to Parliament and whose taxes provided the money for their salaries.

It is believed that M. Savtchitch will work with this second group and that, if he succeeds, M. Aca Stanoyevitch may form a Government of conciliation, with the object of holding elections and beginning real work on the solution of the difficult problems which get more complicated and more dangerous as time goes on.

Economic Union.

While the politicians of Belgrade and Zagreb cannot agree and seem to be steadily drifting further apart, commercial and financial circles tend to come nearer together. The factories and financial organisations of Zagreb have found new fields for enterprise in Serbia and Macedonia, and have profited vastly by the high protective tariff which has cut out Austrian, Hungarian, Italian and other neighbouring competitors. They are more prosperous than they were before the War and far more so than the similar firms who were left in the present Austro-Hungarian territories. Every few days it is announced that new combinations have been made between Zagreb, Sarajevo and Belgrade banks, and this is a happy sign for the future of Yugoslav union.

The Bosnian Elections.

The number of Belgrade politicians who do not oppose the dissolution of the Skupshtina and the holding of new elections has considerably increased since the results of the Bosnian and Herzegovinian municipal elections were announced. From these results it would appear that the Government obtained some 3,390 seats as compared with the Opposition's 1,200. In Belgrade this is considered as showing that the people of Bosnia and Herzegovina support the policy of the present Government, and it is particularly pointed out that M. Pribitchevitch's Independent Democrat Party lost considerably—a sign, they say, that the Serbs of the new provinces do not follow him any longer. M. Pribitchevitch, of course, declares that the elections were influenced by the police and do not represent the true will of the people, while other Opposition members point out that the issues in local elections are vastly different from the vital matters of State which have to be decided by the next elections. M. Yovan Yovanovitch refuses to give any general opinion until the evidence has

been fully sifted. It is affirmed by Government supporters that only four complaints as to the methods of conducting the elections have been made up to the present, and those are all from dissident Radicals complaining of the behaviour of their parent party.

Yugoslavia's Balance of Trade.

Although this year the wheat harvest was extraordinarily good, maize, the staple crop, failed again in the western provinces for the second year in succession. Dalmatia, Montenegro, and parts of Bosnia and Herzegovina will have to be given Government assistance to keep the people from starvation. This means, too, that the hopes aroused by the good wheat harvest, that the balance of trade would be favourable this year, are doomed to disappointment. The comparatively low prices of Canadian wheat and the failure of the Yugoslav exporters, owing to transport difficulties, to take advantage of the earliness of their harvest, have led to a slump in the sale of wheat abroad, and although prunes and fruit have been exported in good quantities, it is feared that prospects for a favourable balance of trade are very slight.

The Revolution in the Austro-Hungarian Fleet.

Ten years ago, on October 31, 1918, the great majority of officers and men of the Austro-Hungarian fleet, mostly Slovene and Dalmatian by birth, hauled down the Austro-Hungarian flag and hoisted the flags of the South Slav peoples. In leading articles dealing with the events of those stirring days the Belgrade Press expresses sorrow that this great fleet was not left in Yugoslav hands, but was divided among the Allies. Especial mention is made of the blowing up by two Italian officers of the flag ship *Viribus Unitas*, although she was flying the Yugoslav flag. Captain Yanko Voukovitch and the three hundred officers and seamen who lost their lives as a result of this dastardly deed are considered as great national heroes. The day is kept as the *slava* of the new fleet which is being built up with infinite difficulty, but which will eventually, it is hoped, be strong enough to ensure the safety of the coast line, won after so many years of struggle.

Anglican-Orthodox Union.

The Anglican Bishop of Gibraltar visited Belgrade, which lies within his vast diocese, last week-end and held a series of services. A reception was held for the British and American colonies at the new British Legation, the style and beauty of which everyone greatly admired.

On Sunday the Bishop assisted the Patriarch Dimitriye during a Litany in the Belgrade Cathedral, and later went as his guest to Karlovatz, where a sitting of the Holy Synod of the Serb Orthodox Church was in progress. Bishop Hicks conferred with the Patriarch and with the Synod on the possibilities of closer contact and eventual union of the Anglican and Serb Orthodox Churches. Two years ago the Bishop of Gloucester lectured in Belgrade University on the great resemblance of the Anglican and Serb Orthodox Churches, so far as all matters of ritual are concerned, and suggested the possibility of reunion. It is well known that the Archbishop of Canterbury is one of a group of great Anglicans who realise the closeness of the two Churches, far greater than that of the Anglican and the Roman Catholic Churches, and desire closer relations and possible union as a first step towards the reunion of all the Christian Churches.

Negotiations with Greece.

It is announced that the experts of the Ministry of Foreign Affairs have finished their work on the examination of the Greek proposals and have suggested that the proposals dealing with the post, postal facilities, Customs, veterinary and railway questions made in March this year to settle all matters not agreed upon in the Convention of 1923 on the Salonika Free Zone and facilities on the Salonika-Ghevgheli Railway, should be accepted. Only slight alterations in the wording have been made, and it is believed that full agreement with Greece should be reached

within the period laid down in the Protocol signed in Belgrade by M. Venizelos and M. Shumenkovitch. A pact of friendship and arbitration should be signed at the same time.

Cairo, October 27.

Commemoration of Zaghloul.

During the past week the Wafd held a celebration in commemoration of the late Zaghloul Pasha. This is the second in memory of its late leader that the Wafd has held this year. The first was on the anniversary of his death, a very natural occasion to choose for a memorial ceremony. Why within two months it should want to hold another ceremony has puzzled many people. The explanation is very simple. The anniversary fell during the school vacation when very few students were in Cairo, and the Wafd, in holding this second commemoration after the reopening of the schools, hoped that this would afford an excuse to the students to demonstrate, and by the moral effect of that act its own failing position would receive some consolidation. It was in fact a deliberate defiance of the Government in its efforts to keep the schools under better control. But the measures taken by the Ministry of Education to set a term to participation in

politics by the students and ensure their close attention to their studies completely thwarted the Wafd, and its efforts to incite the students to rebel against those set in authority over them proved completely abortive.

The attitude of the present Cabinet towards political affairs and the constructive policy which it is following have indeed combined materially to shake the position of the Wafd, and the speech made by Nahas Pasha, which was in the circumstances as unstatesmanlike as it was stupid, followed by the decision of the Wafd to dismiss certain of its members because of their criticism of its policy, reveal the almost desperate frame of mind of those who are now in control of the destinies of the Wafd.

The International Quarantine Board.

The Egyptian Government has agreed to a request presented by the United States Government for representation on the International Quarantine Board in Alexandria. This Board has operated with great benefit to the world at large for nearly half a century for the control of the pilgrims from the point of view of health and the prevention of the spread of epidemics to Europe. It is one of the few remaining international institutions of the country, and the Egyptian Government has for some time been anxious to see the international form of this very necessary health control disappear and its incorporation in its own Public Health Administration. From the very nature of its composition and work, however, the Board comes within the reserved portion of the British Declaration of February 28, 1922 and will have to continue until such time as an agreement is come to on those reserved points. It is understood that one of the main reasons put forward by the United States Government in support of its request was the increasingly large number of American citizens who visit Egypt every year.

The Tropical Medicine Congress.

Preparations have reached an advanced stage in connexion with the International Congress of Tropical Medicine and Hygiene which is to be held in Cairo under the patronage of King Fuad I, from December 15 to December 22 this year. The Congress is to celebrate the centenary of the Qasr Al Aini School of Medicine, and during it the foundation stone will be laid of the new buildings for the Faculty of Medicine and the new hospital which is to take the place of the existing Qasr Al Aini Hospital. According to the information at present available, the leading countries are sending some of their most noted surgeons, physicians and scientists, some of whom will read papers on the research work done in connexion with the various tropical diseases from which the Orient, including Egypt, suffers, the most important among those diseases being bilharsiasis and anklyostomiasis. The delegates will have the advantage of seeing at close range the preparatory work for the execution of the various schemes which the Government has in hand for the improvement of the public health and hygienic conditions of the people. The filling of the "Birkas" and the provision of filtered drinking water for the villages, to mention only two of the schemes, should between them have a most salutary influence on the future health of the nation, since they will remove some of the main sources of infection to which the whole country is at present exposed, while the erection of no less than a hundred and fifty hospitals all over the country, which will mean one on an average for every 80,000 of the provincial population should bring medical attention to the door of the remotest village, and in time materially raise the health standard and reduce the mortality, particularly infant mortality.

The Commercial Secretary at the Residency.

It is with sincere regret that the British colony in general and the commercial community in particular has learned of the departure of the Commercial Secretary at the Residency, Mr. E. Homan Mulock, who, it is understood, has been relieved at his own request for reasons of health. Mr. Mulock was the first incumbent of the post which he now vacates, during the nine years he has held

it he has filled it with honour and ability. He had by no means an easy task, for the old tradition, that British merchants should never receive official encouragement or assistance, set up under the Cromerian régime, still persisted, and made the position of the Commercial Secretary a somewhat ungrateful one. However, with great tact, patience and an infinite capacity for taking pains he managed to win through the early difficult years, and a new outlook on commerce having come into being with the advent of Lord Lloyd as High Commissioner, the Commercial Secretary at the Residency has during the past three years been able to pull his full weight officially, to the great advantage of British trade. One of the outstanding features of Mr. Mulock's work has been his annual reports, written in an attractive style and containing a mass of well-marshalled information, which has been eloquent of his comprehensive grasp of the economic and commercial conditions in this country and has been of the greatest value not only to the community in Egypt but also to commerce in the Empire. Mr. Mulock will be sorely missed, and he is accompanied by the good wishes of those whose interests he has served so well, for a speedy recovery and an early appointment to a post where his special qualifications can be put to the fullest use.

Sofia, October 22.

Bulgaria and the Pact Policy.

General homage is being paid throughout Bulgaria to the frankness and courage with which M. Venizelos (abandoning the nebulous idea of a Balkan Locarno cherished both by his predecessors as well as by certain statesmen of the other countries of the Peninsula) has inaugurated a much more precise and far more practicable policy for the conclusion of separate pacts between the different Balkan States. It is only fair to state, however, that this policy was proclaimed, about two years ago, in the *Sobranie* itself by the Bulgarian Minister for Foreign Affairs, M. Bourouff, who was in favour not of a general entente but of a series of dual agreements as the only means of assuring a lasting peace in the Balkans. But as Bulgaria, a conquered country, could not take the initiative, this would have to come from another capital. It was not very surprising to see it come from Athens, after the advent of M. Venizelos. The various events which have happened on the recent foreign tour of the President of the Greek Council have been followed here with the liveliest interest. This was due not only to the fact that M. Venizelos stated everywhere, and notably at Belgrade, that he intended to be reconciled with Bulgaria also, to whom he declared that he would extend a friendly hand, but in particular because, the real aim of his journey being to prepare, although by an indirect means, the solution favourable to Greece of the Greco-Yugoslav dispute on the question of Salonika, the entente which would result between the two countries could not fail to interest Bulgaria very closely. For Yugoslavia had hitherto aspired to monopolize the direction of all the Balkan States. And now, through the help of the personal action of M. Venizelos in inaugurating a very active and open policy, this direction has been challenged by another Balkan Power, with the co-operation of an outside Balkan power—a rival of Yugoslavia.

Thus is explained here the indisputable success of M.

Venizelos at Belgrade, where he has not only refused all discussion for a new Greco-Yugoslav alliance, but has also declined every proposition tending to secure special advantages to Yugoslavia in the event of certain international complications. It should be added, moreover, that, far from M. Venizelos being grudging this success, there is very great satisfaction over it, for all that tends to enhance the military superiority of Yugoslavia must have unfortunate repercussions on the relations of this State with other Balkan States and particularly with Bulgaria. Yugoslav hegemony in the Balkans, which received a serious shock by the conclusion of the Tirana Treaty between Italy and Albania, has been definitely hit by the diplomatic action of M. Venizelos, which will profoundly modify inter-Balkan relations.

Bulgaria, therefore, views favourably this policy of pacts which has just been begun. But the country is not yet ready to profit by the policy, no important questions outstanding between Bulgaria and her neighbours yet having been regulated. In fact, if one puts aside Turkey, with whom Bulgaria has liquidated all her past problems, neither Roumania, nor Yugoslavia, nor Greece is in the opinion of her Bulgarian neighbours in such a position as to enable treaties of Friendship and Arbitration to be concluded with an end to the definitive consolidation of peace in the Peninsula. One recalls the Bulgarian trouble with Roumania and Yugoslavia; the oppression of Bulgarians in the Dobruja and in Macedonia constitutes the main obstacle to reconciliation.

Greco-Bulgarian Differences.

In regard to Greece the problem is different, for Greece has only small "islands" of Bulgarians in the north-west and could without fear make concessions to the Bulgarian minority. Certainly Bulgarian newspapers have emphasised this side of the matter, but it is not that which would prevent the conclusion of a Greco-Bulgarian pact proposed by M. Venizelos. For there are several other important questions. There is, first, the ratification of the Moloff-Caphandaris Agreement, concluded more than a year ago under the auspices and at the request, even, of the League of Nations, for the recompense of Greeks *émigrés* from Bulgaria and of Bulgarians from Greece, whose properties were liquidated by a special international Commission. This Agreement has already been ratified by Bulgaria, but ratification has been put off by Greece, who, by giving even meagre satisfaction to the unhappy refugees from eastern and southern Macedonia, will help in calming an already excited population and in lessening the causes of friction and of complications between Greeks and Bulgarians. Secondly, a series of old-standing material claims is made out, of which the Greeks are asking Bulgaria for the settlement before putting into execution the Moloff-Caphandaris Agreement, and which the Bulgarians consider as totally devoid of foundation, as having no relation with the liquidation of the refugees' property and, consequently, not being able in any case to condition the vote upon the Agreement in question in the Greek Parliament. And lastly, there is the matter of Bulgarian

access to the *Ægæan* Sea which M. Venizelos, to judge from his numerous references to it, regards as a simple commercial outlet that he would like to place at Salonika, but which the Bulgarians rather understand as a territorial outlet. Bulgarian sentiment on this point, the most important of all, has been most clearly expressed by the ex-Minister of Foreign Affairs, M. Majaroff, formerly Bulgarian Minister in London, who wrote recently in the official *Slovo*. In speaking of the offer of M. Venizelos he said: "M. Venizelos knows that the access which he offers us is not that envisaged in the Treaty of Neuilly which drove us back from Western Thrace, and as far as going to Salonika to increase the traffic is concerned, the Greek State, independently of the special stipulations of the Treaty of Neuilly, will always be anxious to invite and to attract us there; but it is a case here of guarantees which do not depend exclusively upon the goodwill of the Greek authorities." Thus one can see the difference between these two fundamental conceptions.

That, however, is not the only obstacle. The difficulties which I have mentioned will be forcibly elucidated in the course of *pourparlers* if the Greek Government address an official concrete invitation to Sofia to negotiate a Pact. The Bulgarian Government cannot retreat from its position, and if agreement is not found, progress will at any rate have been made in the reconciliation of two different points of view. Another obstacle exists in the indecision of Bulgarian policy, divided between a leaning towards an entente with Greece (the industrial interests of the country tend in this direction) and a leaning towards an entente with Yugoslavia (the ethnic affinities of the Bulgarian people and the moral interest of the future of the country tend in this direction). It is true that these two schools of thought could meet in an "entente à trois," but in such a combination the Macedonian question would automatically reappear—an eventuality which it is sought to avoid both in Belgrade and in Athens. That is why Bulgaria, convinced that the accord between Belgrade and Athens will be difficult to work out and that in the present state of things, if she decided to negotiate with one or other of the parties, it would help that country's interests without bringing profit to herself, is hesitating, at least under the present Administration, to take a firm decision to formulate her claims precisely and to determine exactly her position. It is not necessary to conclude that she is thus condemned to practise a sterile policy of complete passivity, nor, on the contrary, that she harbours any *arrière-pensées* towards her neighbours. In supporting the principle of dual pacts, Bulgaria fears nevertheless that her intervention might be exploited by a third party against herself.

Bryony on the 18th inst. and proceeded to Nicosia, where the Governor was received, with the usual honours, by the leading officers and representatives of the Greek, Muslim, and other communities. "And now," says a Nicosia paper, "Cyprus is waiting to see what gifts His Excellency is bringing from England." It adds that the zeal which the Governor has shown for the progress of the island inspires hopes that they will not be "gifts of the Danaï."

The Swedish Archaeological Mission.

Recent valuable discoveries at Vouni include many objects of gold and silver: large silver cups, solid gold and silver bracelets, figures of calves and goats in gold, several gold, and about 250 silver, coins, and many other objects in metal and pottery, all of great value for Cyprus history and archaeology. Dr. J. Gjellerstad, who is in charge of the mission, at the close of the first year's work has sent to the Greek Press a communication expressing the warm acknowledgment and thanks of the Mission for the good will and assistance which they have met with from Cypriots of all classes. Full accounts of their discoveries will be of the greatest interest. Among the chief localities where excavations have taken place are Dali (Idalium), Lapithos, Galene, Soli (Æpea), and Kovovia.

A Noted Cypriot.

The island has lost one of her foremost and best-esteemed citizens by the death on October 18, at the age of 86, of Dr. John Carageorgiades, of Limassol. He was for many years one of the leading native physicians, and during all his life devoted himself to literature. He translated Milton's "Paradise Lost" and other poems into Greek, and was author of many essays on medical and literary subjects published in Cyprus and Athens. One of his two sons settled in Paris, where he has held a distinguished position in the medical profession, and has also devoted himself to literature.

The "Union" Agitation.

There are many comments on the Greco-Italian Agreement and the work of M. Venizelos. His references to the Dodecanese and Cyprus are regarded as the "voice of diplomacy" which the political circumstances of the moment unhappily call for. It is clear, none the less, that Hellenes in all the islands must continue their patriotic work for the ultimate union with their mother country. The principal local grievance is a complaint that the number of British officials is excessive and that competent natives are passed over for the higher posts, which constitutes an injustice to the Greek community.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 18.

The Statutory Commission.

The work of the Statutory Commission began this week at Poona, and it appears to have begun well. Sir John Simon will not disappoint the hopes of Mr. Baldwin and those others who put their trust in him. The Indian situation is a terribly tangled one, with elements in it that might drive all but the stoutest-hearted to despair. The constitution that can be expected as the outcome of all these new meltings in the melting pot cannot but be a patched-up affair. It will be something if it is not seen to leak the first time it is put on the fire. We must pray that the fire be not too hot.

There have been, in Sir John's setting about his tremendous task, the notes of clear-headedness and calm will. Far too generally has the view been accepted, especially during the last few months, that the old order of things is dead, and that there must be something brand-new put in its place. Sir John has quietly reminded us that the old order is after all the existing order, and that the chief business of the Commission, according to

its terms of reference, is to form a candid opinion of its constitutional value. He has said: "There is one other observation I should like to make, and I would respectfully press it on the attention of my Indian colleagues. We must remember that the first task thrown upon the Commission is the task of giving to the very best of their power a true description of the working of the constitutional machinery in India. Before we come to proposing a remedy, change, and a new Constitution, it is extremely necessary that we, the Commissioners, with the special help of my Indian colleagues and the witnesses, should be in a position to give a just, fair, sympathetic and honest account of the working of the Reforms. We are anxious to learn by the witnesses and by our conference together, and I would beg you not to be impatient if we spend a good deal of time in trying to understand a good deal of detail, and what in fact is the structure of government in India and the working of its necessarily complicated machinery. For, believe me, nobody, not even the greatest constitutional authority with the most intimate knowledge of Indian affairs—nobody can wisely prescribe for any disease until he has conducted a proper diagnosis."

That is the note of clear-headedness. The note of calm will is heard in Sir John's quiet determination, quietly announced, not to let the strength of the Commission be dissipated by a crowd of witnesses at each provincial capital, clamouring to be heard on each one of the thorny questions that have come up. It has been decided that the "main case" should be heard once, and only once. "There will be a number of cases," Sir John has said, "wherein the convenient and practical course will be to examine any topic thoroughly at one place, and if we examine it (only) at one place, it none the less will have its bearing upon the question whenever it may arise in India." Thus the main case presented by the Associated Chambers of Commerce and the European Association will be examined in Calcutta, leaving the Bombay Government and the Bombay Chamber to concentrate on the question of the Meston Settlement. The main case of the depressed classes will be heard at Madras, and the communal question in the Punjab and Bengal. That, certainly, will not be to hear the last case only once; for it will be to hear it twice; but in the main the principle of "one place one main case" will be followed. That is very business-like.

Education Auxiliary Committee.

To inquire into the state of education in India was also among the terms of reference of the Statutory Commission. This work has been delegated, wisely, to a special Auxiliary Committee, known familiarly as the Hartog Committee after its versatile chairman. Sir John Simon expects to receive the Report of the Hartog Committee by December, when, or later, it will be discussed at meetings of the Hartog Committee and the Statutory Commission. The Hartog Committee is now busily taking evidence. In the dearth of news, for little seems to have happened throughout India this week, attention may be drawn to the testimony of one witness before the Hartog Committee, Dr. Moos, a Parsi, Dean and Syndic in Science, Bombay University. Speaking of the withdrawal of the British element in the Education Service, Dr. Moos said, as reported in the *Statesman*, "with his experience as a University Fellow from 1892 and as a Syndic from 1900, it was his conviction that the withdrawal of the English element and the substitution of Indians in the higher grades of the Educational Service had not proved beneficial to the country, or helped in any way in its advance. But the pity of it all was that while, previously, all responsible educational posts were held by Europeans, the highly-qualified cadre was closed then even to the best-cultured Indians. Now the pendulum was swinging round in the extreme opposite direction. It had stripped the Service of the bulk of the capable English element, and a large number of Indians had been drafted instead in the same cadre without any consideration at all of their qualifications, capacity, and integrity."

That is pretty plain speaking, but it is justified. I have had my experience as a teacher in Calcutta, with the opportunity that gave to form an opinion of the general capacity of the Indian as a teacher. I formed the very lowest. I once listened, astonished, to an Indian professor, a man bearing the name of a distinguished family, lecturing to a room crowded with the students of the Presidency College. The man's utterance was a voluble flow of utterly meaningless phrases. I should not have believed it possible for any man to speak so long without any meaning whatever of his own. It was an incredible exhibition. Many a lecture have I heard since, and only once—the man that time was a medical man—had the lecturer any means of his own. Yet one can have another memorandum, this one presented to the Statutory Commission by the Muslims of Bihar and Orissa, beginning: "We whole-heartedly and emphatically join in the popular demand for the Indianisation of the Services and the Army." If you move a Dr. Moos to such strong language merely by withdrawing the British element from the Education Service, and do so when only ten or so years have passed, to what language might you not move an inspecting British Field-Marshal a hundred years after you had Indianised the army?

THE LATE MR. SATISH RANJAN DAS.

Mr. S. R. Das, the Law Member of the Viceroy's Council, a brief reference to whose untimely death on October 26 was mentioned in last week's issue of THE NEAR EAST AND INDIA, was one of the ablest and best-known of the senior members of the Calcutta Bar. He was educated at Manchester Grammar School and, after being called to the Bar in 1894, he was enrolled in the same year as an advocate of the Calcutta High Court. He came of a legal family, his father and his uncle being successful lawyers. Durga Mohan Das, his father, was originally a pleader at Barisal, who came to Calcutta at the time when the High Court was established, nearly seventy years ago. He was able and energetic, and he built up a large criminal practice which he maintained for a great many years.

Bhuban Mohan Das, his brother and father of the late Mr. C. R. Das, the founder of the Swaraj Party, was a solicitor who also practised in Calcutta for a very long time. Mr. S. R. Das inherited his father's legal talents and, although, like his cousin Chitta Ranjan, he had difficulties to begin with, he became in course of time one of the most successful barristers in the High Court. He was generally considered to be a sound lawyer and an able advocate, keen and strong in argument, and courteous and restrained in bearing and language.

He was appointed Standing Counsel to the Government of Bengal in 1917, and Advocate General in 1922. His ability, skill and tact enabled him to discharge with distinction the not too easy duties of these offices. In fact, he was so successful as to be raised to the higher office of Law Member of the Government of India, on the retirement of Sir Tej Babadur Sapru, in November, 1925. Mr. Das was married to a daughter of the late Mr. Behari Lal Gupta, who was one of the first Bengalis to enter the Indian Civil Service.

In politics Mr. Das was essentially a moderate. The extreme opinions which his cousin, Chitta Ranjan, promulgated with so much force and ability made no appeal to him. He was a believer in steady and ordered progress, and he was never attracted by the pyrotechnic displays of political agitation as practised in Bengal.

Following in his father's footsteps, he was devotedly attached to the Brahma Samaj, the Theistic Church which was founded in 1830 by Raja Ram Mohan Roy, the Hindu reformer. There was a serious division in the Samaj when Keshab Chunder Sen, its distinguished leader, married his eldest daughter to the Maharaja of Cooch Behar. Mr. Das's father, Durga Mohan, was one of the principal seceders, and he became a moving spirit in the new

Church which he and his friends organised and which they named the Sadharan Brahma Samaj.

It was of this section of the Church that Mr. S. R. Das was a prominent member. He lost no opportunity of working for it, and for the promotion of the theistic faith for which it stands. He was also keenly interested in many other movements having for their object the advancement of the people.

Education was one of the subjects that Mr. S. R. Das had at heart, and for some time past he had been trying to promote the establishment in India of a school of the English public school type. This effort on his part was referred to in THE NEAR EAST AND INDIA some months ago, when it was mentioned that he proposed to collect Rs.30 lakhs to meet the cost of the necessary buildings, and to provide an adequate endowment. At that time it was understood that of this amount Mr. Das had succeeded in raising no less than Rs.18 lakhs.

INDIAN CIVIL SERVICE.

List of Appointments.

The following is the list of candidates selected for appointment to the Indian Civil Service on the results of the Open Competitive Examination held in London in August:—

G. C. S. Curtis, Westminster, Christ Church, Oxford; J. B. Shearer, Greenock Academy, Glasgow University and Trinity, Oxford; C. B. Duke, Charterhouse, Lincoln, Oxford; C. N. Sharples, Blackpool Secondary School, Selwyn, Cambridge; H. A. C. Gill, Bradfield, Magdalene, Cambridge; B. N. Chakravarty, Zilla School, Bogra, Calcutta University and London University; N. K. Paterson, George Heriot's School, Edinburgh, Edinburgh University; M. Anantanarayanan, Hindu High School, Triplicane, Madras University and Caius, Cambridge; F. N. Crofts, Rugby, Caius, Cambridge; A. W. Robertson, High School, Dublin, Trinity College, Dublin; M. P. Pai, Madras Christian College, Madras, Madras University and London University; J. G. Simms, Winchester, New College, Oxford; E. P. Moon, Winchester, New College, Oxford; C. A. G. Savidge, Aberdeen Grammar School, Aberdeen University; J. S. Hardman, Manchester Grammar School, Trinity, Cambridge; H. Trevelyan, Lancing, Jesus, Cambridge; B. Sahay, Shyam Sunder Memorial School, Chandausi, Allahabad University; B. D. Mirchandani, Government High School, Hyderabad, Singh, and Government High School, Larkana, Bombay University; T. E. Waterfield, Clifton, Magdalen, Oxford; N. Singh, Government High School, Amroati, and Neill City High School, Nagpur, Nagpur University; R. K. Mitra, Collegiate School, Krishnagar, University of Calcutta and London University; K. B. Bhatia, Government High School, Baranki, Allahabad University and London University; A. C. Hartley, Cowley School, St. Helen's, Victoria University, Manchester; L. A. Chapman, Chigwell School, Non-Collegiate, Oxford; B. K. Patel, Elphinstone High School, Bombay, Elphinstone College, Bombay, and Christ's Cambridge; R. A. Dutch, St. Olave's and St. Saviour's Grammar School, London, Christ's, Cambridge; V. N. Sardesai, New English School, Poona, Deccan College, Bombay, and London University; H. A. N. Barlow, Marlborough, Corpus Christi College, Oxford; B. C. A. Cook, Radley, Brasenose, Oxford; J. L. Llewellyn, Nottingham High School, King's, Cambridge; G. E. W. Hannington, Strand School, Brixton, Queen's, Cambridge; J. C. W. Eustace, Wellington and Brentwood College, Victoria, B.C., Exeter, Oxford; S. W. G. Olpherts Forrester, High School, Panchgani, Bombay, Nagpur University and London University; L. G. Lyde, Rugby, Wadham, Oxford; V. Ramaswami, Madras Christian College, Madras, Madras University, Allahabad University, and London University; E. A. A. Snelson, St. Olave's School, Tower Bridge, Caius, Cambridge; M. Seshadri, Municipal High School, Cuddalore, and St. Joseph's High School, Madras University and London University; W. T. Bryant, Christ's Hospital, Keble, Oxford; G. E. E. Webster, Calabar High School, Kingston, Jamaica, Trinity, Oxford; N. T. Mone, Hitkarmi High School, Jubbulpore, and Model High School, Jubbulpore, Allahabad University and Nagpur University; A. J. Salisbury, Christ's Hospital, St. John's, Oxford; D. Fishwick, Bradford Grammar School, Peterhouse, Cambridge; R. Mukkarji, Ram Mohan Roy Seminary, Patna, Patna College and St. John's, Cambridge; L. P. Hancox, St. Olave's School, Tower Bridge, Christ's, Cambridge; E. W. Bouchier, St. Olave's School, Tower Bridge, University, Oxford; C. B. C. Paine, St. Paul's, Exeter, Oxford; F. B. Arnold, Bishop's Stortford College, Trinity Hall, Cambridge; R. H. S. Healy, Earlsfoot House School, Dublin, Trinity College, Dublin; J. George, Priory County School, Shrewsbury, Queen's, Cambridge; S. Y. Krishnaswamy, Salem College School, Salem, and Pachaiyappa's School, Madras, Madras University; H. P. Tollinton, Radley, Balliol, Oxford; H. J. Evans, City of London School, Jesus, Oxford.

INDIAN NOTES.

The Indian States Inquiry.

The Indian States Inquiry Committee resumed its sittings this week under the Chairmanship of Sir Harcourt Butler, and heard further submissions from Sir Leslie Scott respecting the legal and constitutional aspects of the relations between the Indian States and the Paramount Power. In support of his contention that new machinery and readjustments are required to protect the States in the enjoyment of the rights, political and economic, to which they are entitled, and to provide for joint consultation with British India in matters of common concern, Sir Leslie Scott is quoting exhaustively from the documentary material supplied by the large group of Princes on whose behalf he is appearing before the Committee. The evidence, it is understood, is in four volumes, extending in all to over some 3,000 closely printed foolscap pages. Last week Sir Leslie Scott drew attention to cases set forth in the second volume which relates to the intervention of the Paramount Power between the Ruler and his subjects; the deposition of rulers and the compulsory modification of their powers; minority and other temporary administrations and acts done by or at the instance of the Government of India during such periods; control of successions; and complaints of derogation from the traditional dignity of rulers. Sir Leslie Scott has now completed, we understand, the exposition of the second and third volumes and expects to deal with the remaining volume during the course of the present week's sittings. There will then be an adjournment for ten days or a fortnight. On resumption of the sittings Sir Leslie Scott expects to address the Committee over three more sittings, and it is anticipated that the inquiry will close on November 27.

The I.C.S. Lists.

An examination of the list of the selected candidates for the Indian Civil Service arouses reflections of interest. In the first place, it is satisfactory, after the lack of competition in recent years, to find thirty-seven European candidates of a sufficiently high standard. Secondly, it is pleasing to note that the continuity of family service in India is maintained in several cases. Among these we notice particularly the name of Mr. G. C. S. Curtis, who passed at the top of the whole list, whether for the Home or the Indian Service, thus emulating, we believe, the example of his father, Sir George Curtis. Another name that will interest many in Northern India is Mr. H. P. Tollinton, the son of the Punjab Civilian who bore the same name and initials, though better known to fame as Bollinger. A further satisfactory feature is the number of candidates who, having already graduated at Oxford or Cambridge, are spending their year of probation at the London School of Oriental Studies. At this centre they are more likely to study the Oriental languages with zeal than in the *milieu* in which they have spent the preceding three or four years. An examination of the names of the fifteen successful Indian candidates is also interesting. Thirteen, possibly fourteen, as one surname may belong to a Hindu or a Parsee, are Hindus: the fifteenth is presumably a Sikh. Not a single Muhammadan, and, of course, no Burmese, is to be found in the list. Further, the successful candidates appear to come almost exclusively from the three Provinces of Bengal, Bombay, and Madras: with the result that many of them have to be sent to Provinces with which they have no more connexion than the European newcomer to India. It is true that the lack of representation of important sections of the population, and of certain tracts of the country, is to some extent made up by the fifteen candidates appointed or nominated in India. Of these four or five are Muhammadans and three are Burmese. The fact, however, remains that no system of examination, properly conducted, in India will produce a crop of successful candidates which can properly be reconciled with self-determination and self-government.

Indian Railways and the Provinces.

The twenty-fifth session of the Indian Railway Conference Association, which was held at Simla last month, was noteworthy by reason of an exceptionally thoughtful and well-reasoned address by the President, Mr. N. Pearce, Agent of the Eastern Bengal Railway. Several questions of outstanding importance were discussed by Mr. Pearce, and he had something illuminating and useful to say about each one of them. For example, he expressed the interesting opinion that the railway system of India will eventually become too big for one Railway Board, or for one Indian Railway Conference, to handle. He thinks that it may be a feasible solution for each province to have its own Railway Board, and its own Conference Association, and its own control of railway finance. He realises, however, that some sort of central organisation will be required, although on this point his suggestions do not seem to have been very definite. It is of particular interest to note that, in his opinion, "the split must come, and perhaps sooner than any of us imagine." Provincial autonomy as regards the ordinary administration of the provinces is certainly anticipated. But we question whether there are many people who look forward to provincial autonomy for the Indian railways. The Indian railway system has been designed and worked out as a central system without reference to provincial boundaries. And to break it up now into a series of provincial sub-systems would seem to be a task almost as formidable as that which confronts the Simon Commission. Sir Clement Hindley, the retiring Chief Commissioner of Railways, does not agree with Mr. Pearce, and he said so very plainly at the meeting. He maintains that the organisation which the existing Railway Board has set up on the Indian State Railways contains the germ of a complete decentralisation scheme for all the railways in India. And he refuses to believe that any railway system can be too big to be managed by one central body such as a Railway Board, or Commission, or whatever it may be. Sir George Rainy, the Commerce Member of the Government of India, agreed with Sir Clement Hindley that the scheme is impracticable except as regards Burma and, possibly, Madras. Each separate railway system, if it is to be a success, must be, Sir George Rainy holds, an economic unit; and the Indian provinces are not economic units except perhaps to the limited extent indicated. We are inclined to think that most people will agree with this, but all the same it seems to us to be a good thing that a prominent Indian railway man, such as Mr. Pearce, should have given public expression to his view. For the question of decentralising the railway administration is certain to be raised before very long, and it is satisfactory to know that those responsible for the State lines are alive to the possible necessity for far-reaching changes.

RETIREMENT OF MR. N. C. SEN.

Mr. N. C. Sen, son of the Indian religious and social reformer, Keshub Chunder Sen, has retired under the age limit from the post of Adviser to the Education Department of the High Commissioner for India after 15 years' service in connexion with the requirements of Indian students in this country. With Mrs. Sen and their three daughters he is returning to India, leaving London on November 22. Lord Reading presided at a dinner given to Mr. and Mrs. Sen and their daughters at Claridge's on October 31, and paid tribute to the admirable services they have rendered in promoting good relations and social intercourse between English people and Indians in this country.

Letters of appreciation of the work of Mr. N. C. Sen in London and regret at inability to attend were received from Lord Peel, Lord Birkenhead, Mrs. Edwin Montagu, the Aga Khan, the High Commissioner for India, Lord Ronaldshay, Lord Winterton, and others. In addition to the guests of the evening the company included:—The Countess of Birkenhead, Lord and Lady Erleigh, Sir Harcourt Butler, the Dowager Lady Boyle, Sir Arthur Hirtzel, Sir Dorab and Lady Tata, Sir Thomas and Lady Carey-Evans, Sir Denison and Lady Ross, Mr. and Mrs. Dudley Myers, Sir Edward and Lady Boyle, Mr. B. Webster, Sir George Sutherland, Mrs. V. Gamble, Mr. J. C. B. Drake, Mr. F. H. Brown, and Mr. and Mrs. Alfred Ezra.

LORD CARNOCK.

The death is announced of Lord Carnock, a diplomatist who accomplished most distinguished work in the Near and Middle East. Arthur Nicolson, son of Admiral Sir Frederick Nicolson, was born in 1849. Before he was 21 he was appointed to a clerkship at the Foreign Office. In the early 'eighties he had diplomatic experience, under Lord Dufferin, at Constantinople. From Turkey he went on to Greece and Persia, where he was Chargé d'Affaires from 1885-1888. For the next five years he was Consul-General at Budapest, gaining much experience of and insight into Balkan diplomacy. His work as Ambassador at St. Petersburg, particularly in the consummation of the Anglo-Russian Agreement of 1907, is well known. In 1910 Nicolson became Permanent Under-Secretary of State at the Foreign Office; six years later he retired. He was then, in 1916, created Lord Carnock. But his interest in foreign affairs, particularly in the affairs of the East, did not abate, as a proof of which it is necessary only to mention his Presidency of the Central Asian Society. The third son of Lord Carnock, Harold Nicolson, who is now Counsellor at the British Embassy at Berlin, appears to be following his eminent father's footsteps, having already had experience in the Foreign Office, Constantinople, and Teheran.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held on November 13, at 8.30, to discuss "Concessions in Palestine." At this gathering, which will meet, by kind permission of Mrs. L. Cobham, at 14, Hans Crescent, S.W.1., the principal speakers will be Lord Danesfort, Sir William Beach Thomas, and Miss Homer.

THE ARAB HORSE SOCIETY.

At a Council Meeting of the Arab Horse Society, held on October 31, the following new members were elected: Agnew, Major John S., Battlies, Rougham, Bury St. Edmunds; Badger, Mrs. T. R., Orchard House, Horninghold, Market Harborough; Lavington, Mrs. M. M., Poplar Cottage, Bracknell, Bucks; and Rihani, Ameen, 11, Nevern Road, Earls Court, S.W.

The Lady Margaret Savile, Ditton Lodge, Thames Ditton, Surrey, and Major S. A. Medcalf, Aylands, Waltham Cross, Herts., were elected as Governors.

The Council decided that the Governors be *ex officio* members of the Council with full voting powers.

The classes for the London Show and the Bath and West Show, 1929, were duly arranged.

The Council received from the Arab Race Committee the Report of the Arab Race held at Portsmouth on September 15, the Committee stating that the race attracted much interest.

A Budapest message states that Hungaro-Roumanian negotiations concerning the agrarian dispute have been postponed in consequence of the illness of Baron Szterenyi, the Hungarian delegate. The negotiations in Rappalo will not begin before November 14.

Dr. J. L. Magnes, Chancellor of the Hebrew University in Jerusalem, on October 31 formally opened the Einstein Institute of Mathematics. In the course of a speech he announced the establishment of a Lord Plumer Arabic scholarship. He also stated that five Arab students are now in a chemical institute of the University.

The first Indian regiment to enter Basrah in 1914, the 3rd Battalion, 5th Mahratta Light Infantry, was the last to leave the country. This regiment entrained at Baghdad on November 1 to return to India. The Air Force and the Assyrian Levies are now the only troops remaining in Iraq paid by the Imperial Exchequer.

According to the *Morning Post* Athens correspondent, a Greek Foreign Office conference, presided over by M. Venizelos, examined and approved the instructions given to M. Pappas, Greek Minister in Angora, who left for that capital on November 3 to begin negotiations for the settlement of outstanding questions between Greece and Turkey.

NEWS IN BRIEF.

A group of 115 Afghan students, including fifteen girls, has arrived in Turkey, in order to complete their education. The girls will be drafted to the Candilli Lycée, and the boys to different institutions at Constantinople and in Anatolia.

The India Office announces that the King has been pleased to approve the appointment of Mr. William Thomas Webb Baker, I.C.S., as Puisne Judge of the High Court of Judicature at Bombay, in the vacancy which will be created by the retirement of Sir Louis Charles Crump, I.C.S., on January 1, 1929.

The Provincial Governor at Khuzistan on October 22 unveiled a statue of the Pahlavi Shah at Muhammarah. The statue, which is being paid for by local subscription, was made in Italy and weighs 12 tons. The actual work of putting the statue into place was done by the Anglo-Persian Oil Company.

The death occurred on November 1 of Sir Alexander Blackie-William Kennedy, the eminent engineer. A few years ago Sir Alexander made an exhaustive exploration of Petra, and his "Petra: Its History and Monuments," in the production of which he was helped by the Royal Air Force, who took photographs, and by Mr. St. John Philby, was the result of this most laudable enterprise.

Great preparations were made in Khuzistan (Arabistan) for the visit of Shah Pahlavi, who arrived at Abadan, where the Anglo-Persian Company's refineries are, at the end of last week. The people of Abadan subscribed to present his Majesty with a gold-leaf covered chair, and the people of Muhammarah with a miniature palm tree in gold.

The Greek Red Cross has conferred its decoration on Major Reed M. Davidson, director for the Near East Relief in Egypt, Macedonia, and Thrace. The decoration was conferred for "Service to humanity at great personal sacrifices and as a true friend of Greece." Major Davidson has the Greek Commander of St. George medal and the Greek war cross, both awarded by the Greek Government for similar service to that mentioned above.

The new flying-boat flight which is now being formed at Catterwater Air Station, Plymouth, under the command of Group Captain H. R. Busted for service in the Persian Gulf, is to be equipped with new giant Blackburn Rolls-Royce flying-boats. These flying-boats, which are now nearing completion at Brough, in Yorkshire, are of all-metal construction and are stated to be the largest in the world. They are each driven by three Rolls-Royce engines totalling 2,700 horse-power.

Worcester College, Oxford, announces that it is proposed to elect in January to a studentship founded under the Laycock Trust "for the purpose of encouraging the study of Egyptology or other cognate Oriental linguistic subjects." The studentship is of the value of £200 per annum, and will be tenable for a period not exceeding three years, with possibility of a re-election for a second period. Candidates must have passed the examinations required for the degree of B.A. in the University of Oxford and must either be members of Worcester College or join that society on election. Applications, accompanied by not more than five testimonials, should be sent to the Provost of Worcester College before January 1, 1929.

SOME QUEER CUSTOMERS IN PERSIA—I.

The Patriarch Brigand.

BY H. GASCOIGNE HART.

The life of a Bank Manager is for the most part prosaic, even in Persia. And, indeed, when I think of my ordinary customers, my memory recalls little more exciting than long drawn out discussions over rates of discount and exchange, or persistent clamouring for loans without security. But in the course of many years spent in the land of the Lion and the Sun, I had dealings with some customers whose behaviour departed from the commonplace. These often made me angry, and sometimes got me into trouble. Yet I remember them with gratitude; for to them do I chiefly owe a strange insight into the character and mode of life of a lovable, aggravating Oriental people.

Twenty years ago I stood in my office in the Holy City of Mashhad, gazing out of the window at the majestic dome and slender minarets of the great mosque of the Imam Reza.

As I stood, revelling in the delicate blues and yellows of the tilework, so well suited to the clear Persian sky, marvelling at the magnificence of the buildings and the beauty of their proportions, there arose within me a doubt.

And I asked myself in my own mind:—

"Can the religion which inspired the architect of such a work be wholly false?"

While I was lost in reverie, the muazzin ascended one of the minarets of the mosque.

"*Allāhu akbar! Allāhu akbar!*" he cried, calling the Faithful to prayer. "God is most great! I testify that Muhammad is the Prophet of God! God is most great!"

When the shrill, sweet sounds of the Announcement had died away, I heard the voice of my *ferrash* behind me;

"Rais! There is a peasant who wishes to see you."

I turned round, displeased; for the day's work was over, and I would gladly have been left to my thoughts.

"A calamity has happened!" cried the peasant, after he had spoken many complimentary phrases. "A small caravan, with nine thousand tomans (£2,000) was travelling peacefully along the road from Nishapur to Mashhad, and had reached Ab-i-diz, when a number of men in white trousers suddenly appeared on all sides. The vile highwayman," the peasant lowered his voice, "killed the luckless muleteer, Bahram, and his boy Ali! They carried away all the money. And now, Sahib, I want a present for the tidings."

"A present for bringing bad news?" No! Upon reflexion I added: "But why have you come to tell me this? I am not expecting a caravan of money."

Nor was I. For although I had twice requested Hajji Sayyid Hashim, the Bank's Agent at Nishapur, to remit his surplus funds to Mashhad, by bills if possible, or else by caravan, my request had apparently been ignored.

The next morning a telegram, which had been handed in at Nishapur three days before, was placed in my hands.

In accordance with your instructions, it ran, I have to-day dispatched 9,000 tomans by caravan. Have guards sent to Ab-i-diz to take delivery.—Hashim.

So it was the Bank's money that had been robbed! Feeling a desire to exchange ideas with someone, I summoned our interpreter. Why he was called an interpreter, I know not; for he spoke no language but his own.

"This message was delayed by a defect in the wire,"

I said, quoting the official explanation. "The coincidence is curious."

"Very," assented the interpreter, looking at me over his *pince-nez*. "And besides, even if we had received the telegram three days ago, we could hardly have had guards sent to Ab-i-diz by the time the caravan got there. Presumably," he went on, "the robbers were Afghans; for they wore white trousers. The trousers of our countryfolk are blue."

"There are no Afghans in the Nishapur district," I observed, drafting a letter to the British Consul General.

The Consul General took prompt action; he instructed K—, who was then Vice-Consul at Turbat-i-Haydari, to proceed to Ab-i-diz to investigate the affair. It so happened that I went too.

My way lay along the old Khorasan road, a road trodden by countless generations of warriors, pilgrims, and travellers; past Sharifabad, a village nestling under hills of red sandstone; across a dusty, wind-swept plain. The stars were shining long before I reached Fakhr-i-Daoud, or the Glory-of-David, where K— had pitched his camp.

Next morning we rode on to the Ab-i-diz, which is a small stream about thirty-five miles from Mashhad, and roughly the same distance from Nishapur.

"This is where the muleteers were attacked," said K—, "And over there," he pointed to a bend in the valley, "is the place where the robbers threw the specie boxes after breaking them open. I looked yesterday for loose coins, but found none. I'll say no more at present; for I would like you to draw your own conclusions. Your Agent, by the way, has come out to meet you. He is staying at the village of Akbarabad, of which he is landlord. We will go there this afternoon."

We lunched near a little shrine, built over a rock on which the Imam Reza left an imprint of his foot. Just before we reached Akbarabad, we saw Hajji Sayyid Hashim coming slowly towards us, followed by a small crowd of retainers, servants and villagers.

The Sayyid was a tall man, as Persians go, well on in years, spare and vigorous; his eyes were bright yet full of sadness; his nose aquiline; his beard full, dyed black with henna and indigo. A dark blue turban and flowing cloak enhanced the dignity of his appearance. He looked for all world like some wise old patriarch of Biblical times.

Taking my hand in both his, he bowed over it saying: "Peace be with you, Rais! Praise be to Allah, you have arrived safely! This is a terrible calamity! Terrible!! Please God, you will catch the wicked ones and have them punished. The muleteer's widow, poor woman, leaves me no rest. Wai! Wai!! Wai!!!"

Then he added, in the same grave way that he had spoken before:

"This is my son, Ali Akbar, who is my right hand." A younger man came forward.

"Your Excellencies have done us a great unkindness," said Ali-Akbar glibly. "You have belittled us in the sight of our people." He waved his hand over the village. "We expected to be honoured by your presence. Lunch was prepared for you to-day. Is there anything special that you would like for dinner? You have but to command."

After a short consultation with his Indian clerk, K— turned to Hajji Sayyid Hashim. "We will dine with you to-night," he said politely.

The venerable Sayyid bowed.

"I go to pray. After sunset I shall be at the service of your lordships."

"I am sorry for the old boy," said K—, as soon as the Sayyid had left us; "for it seems to me that he is beginning to suspect his son."

Later in the day two villagers appeared. Their eyes were haggard, their faces pale and drawn. They were dirty and wretchedly thin, and their clothing hung in rags upon them.

"Opium fiends," observed K— with a grimace of disgust.

"These men were working in a field on the day of the

THE PERSIA SOCIETY.

E. H. Keeling,
Hon. Sec.

outrage," explained Ali Akbar. He turned to them. "Tell the Sahibs what you saw."

One of the men began to pour out a long tale. He was hoeing on the slope of a hill near the Ab-i-diz, so he said, when he saw the little caravan coming slowly along the road from Nishapur. Far away on the plain below a band of horsemen were galloping towards it. Leaving his work he ran to the nearest village to give the alarm.

"Why?" I asked.

"Because the horsemen were Afghans. They had black turbans and white trou—"

K— interrupted the peasant. "It is useless to go on," he said to me. "An opium smoker would sell his soul to get money for the drug; and besides, before Hajji Sayyid Hashim came here, the villagers scouted the idea of any Afghans having been in the neighbourhood. I have seven depositions."

At this moment a third man came up, and pushed the two ragamuffins aside. With him was a lad some fifteen or sixteen years old.

"That is the man," I observed, "who first brought me news of the robbery."

"He is a hireling of Hajji Sayyid Hashim's," remarked K—

"Here is Ali, the muleteer's boy," began the peasant. "He will tell you what befell—"

"Ali was killed!" I broke in.

"By the mercy of Allah, no," said the lad in a discordant voice. "I got away from the villains who slew my poor master." He sobbed out the last words. "Cursèd be their fathers!"

"This is a farce," exclaimed K—. "Send them all away, Ali Akbar. We will resume the inquiry at Nishapur."

A mile or so out of Nishapur we were met by the Governor's empty carriage and several outriders, sent to escort us into the city—a quaint mediæval custom, which the Persians call *istiqbâl*.

We were given rooms over the entrance gate to the Governor's Garden, which is considered one of the most beautiful in Persia.

The Governor, Hajji Khazan-ol-Molk, came to call in the afternoon. After assuring us that we might count upon his aid, he expressed a hope that we had been able to trace the thieves.

K— answered bluntly and to the point.

"The money never left Nishapur."

"But," protested the Governor, surprised, "my guards escorted it to Ab-idiz. The Governor General of Khorasan is responsible for the road beyond."

"Your Excellency's road guards," I ventured to remark, "should have waited for the guards from Mashhad, and obtained their receipt."

"My guards would not have left the money without obtaining a receipt," he replied, nervously cracking his finger joints. "I will send for the sergeant."

For a while we sat in silence, save for the gurgles of the Governor's water-pipe. Then the sergeant appeared, and with him Ali Akbar, who, after bowing to us all, folded his cloak about him, and sat down on his heels at the bottom of the room.

"Give me the receipt," ordered His Excellency.

"May I be thy sacrifice, here it is," replied the sergeant, producing a slip of paper.

"The seals," I observed, "are those of Bahram and Ali—the names of the muleteer and his boy."

"May I venture to explain?" purred Ali Akbar, a note of triumph in his voice. "His Excellency authorized the guards to hand the money over to the muleteers at Ab-idiz, if the Mashhad escort had not arrived. I have his written authorization."

He had. By what devious Oriental methods he had obtained it, I do not know.

"The road was reported to be perfectly safe," declared His Excellency, who felt that he was in an awkward position.

The Governor's son then spoke for the first time.

"Because I know myself to be astute" [*sic*], said the youth, "therefore do I admit that the money never left Nishapur."

Ali Akbar rose, the picture of outraged dignity. "By Your Excellency's leave," he cried, "I will bring fifty good men to disprove that statement!"

"I cannot understand," said the Governor in an aggrieved tone, when Ali Akbar was out of hearing. "Hajji Sayyid Hashim is one of our richest and most respected merchants."

It rained hard during the next two days; the weather grew cold, so cold that we kept a fire burning all day long. And this on May 15. We examined a host of witnesses, among them several—sent to us by Ali Akbar—who swore that as the caravan was leaving Hajji Sayyid Hashim's serai in Nishapur, one of the mules knocked against a gate-post, breaking a specie-box, and scattering silver coin broadcast.

"Manufactured evidence!" exclaimed K— wearily.

"I am tired of listening to all this nonsense. If the weather clears to-morrow, we will make a pilgrimage to the tomb of Omar Khayyam."

The sun shone from a cloudless sky the next day when we rode through the city gate; past some potters' shops which hug the walls; on to the plain, the wonderfully fertile plain that surrounds Nishapur.

All around us were green cornfields, waving in a gentle breeze. The huge mountain chain to the north was green too, clothed in rhubarb, and aromatic shrubs. There is enough rhubarb growing wild on those hills to supply the whole world. The air was fresh and sweet; and the sky—no words can describe the Persian sky!

Skirting the ruins of the old city, built in the fourth century by the Sassanian king Shapur the Great, we came to the little garden that encloses the tomb of Omar Khayyam.

K— was fortunate; he found among the bushes of yellow roses growing by the poet's tomb, a *gul-i-dau-rukh*, the rare double-faced rose. Yellow it is, with a red centre—the rose that inspired the quatrain:

And David's lips are lockt; but in divine
High piping Pahlavi with "Wine! Wine! Wine!
Red Wine!" the Nightingale cries to the Rose,
That sallow cheek of hers to incarnadine.

One more witness came to see us—Bahram the muleteer's "widow." She declared that her husband had gone not to the *bahasht*, or paradise that awaits all good Muslims, but to the Holy City of Karbala, whither he had been sent on a pilgrimage, by Hajji Sayyid Hashim and his son.

This concluded our inquiry; and we left Nishapur. Ali Akbar, unabashed by the discovery of his misdeeds, would have accompanied us part of the way, but we sent him about his business.

Eight months later he was imprisoned and fined by the Governor General in Mashhad. Within five years or so he was made to repay with interest the money that he had stolen from the Bank. The old patriarch, his good name gone, was left in peace, to ponder over the consequences of dishonesty. Justice is slow in Persia, and not always so sure.

The Varna police last week arrested three of the Greek brigands who in 1927 attacked a convoy between Prevenza and Yanina and carried off 15,000,000 drachmæ (£40,000) intended for the National Bank of Greece.

CLAUDIUS RICH AT BAGHDAD.

"*BAGHDAD IN BYGONE DAYS.*" By Constance M. Alexander (London: John Murray. 16s. net)

The merits of the work which Claudius Rich performed at the beginning of last century in the establishing and upholding of British prestige at Baghdad, are adequately realised by all historians, but the full story of his great struggles there, when he was ill supported by the authority of the East India Company at Bombay and constantly intrigued against by the Turkish authorities, had not previously been told. It is, therefore, both a timely work and one very well worth reading for its own sake that Miss Alexander, of whom Rich was the great-great-uncle, has done in piecing together, from the journals and correspondence of Rich himself, the life history of a very remarkable man.

Even the beginnings of Rich's life were in keeping with the romance of his career, for neither his parentage, nor the year nor the place of his birth is exactly known. Probably he was the illegitimate son of Colonel James Cockburn; probably he was born in 1786; certainly he was born somewhere in France. Rich spent the early years of his life in Bristol and Kilkenny. Very soon he showed great aptitude in languages, particularly in Latin and Greek, Arabic, Turkish and Persian, Hebrew and Syriac. In the port of Bristol one day he met a Turk, and tried his knowledge of the Turkish language upon him. The effect was enchanting; thereafter he was resolved upon a career in the East. He obtained a military cadetship in the East India Company, and in 1804 took ship for Gibraltar. Thence Rich wandered on, through Italy, for which country he retained to the end of his life a passion, to Constantinople and the Asiatic provinces of Turkey, where he spent fifteen months. In 1806 he was appointed Assistant to the Consul-General at Alexandria. The following year, however, he was appointed to Bombay, and for the journey thither significantly chose the land route by Palestine and Syria, Aleppo, Urfa, Mardin, Mosul, Baghdad, and Basra. He performed this journey disguised as a Mameluke—which is sufficient proof of his ability even then to live as one of the people of Islam among whom his lot was to be cast.

At Bombay he was married to Mary Mackintosh, daughter of the Recorder of Bombay, Sir James Mackintosh, who was a very steady friend of Rich. It was the happiest union, for Mrs. Rich was most ably to uphold in the social sphere the dignity of her race and the position of her husband. A few days previously he had been appointed Resident at Baghdad; this was before he was twenty-two! Passing through Basrah, he found trouble in the personality of the Company's Resident there, Mr. Manesty, who lived and acted by no means according to the high British standard which Rich was resolved to adopt, and in fact did adopt.

At Baghdad Rich found British prestige low enough. The French were the nation who were feared in Turkey, and "Baghdad was looked upon as one of the towns that Napoleon would make his headquarters on his way to the

Conquest of India, the aim of his ambitions, and he was thought at that time to be invincible." Of the way in which the Rich's settled down to domestic life in Baghdad, interesting though the account is, there is no space to write here.

Suffice it to say that the friction between Turkish Pasha and British Resident which was to end in complete victory of the Resident began in the first years of Rich's commanding sway. Rich felt very bitterly the ignominy of the position of British subjects in Western Asia, who could never rely upon support from the British Government. This he was determined to remedy. Another of the weaknesses of the British position upon which he at once concentrated was the tendency to employ "mercenary Greeks or half-caste natives of Constantinople" as dragomans. It is well to remember that this perspicacity of Rich might be regarded as premature even to-day!

Between 1808 and 1810 Rich was an indignant witness of the two famous British Missions to Persia, under Sir Harford Jones and Sir John Malcolm respectively. Sir Harford was sent to negotiate with the Shah by the British Government; Sir John was sent by the Government of Bengal. Rivalry was acute; so was Governmental stupidity. Rich boiled at the absurd situation; he could not stand Sir Harford as a representative of the British Empire; of him, in fact, and of the way in which these affairs reflected upon India, he wrote: "We seem to be taking the shortest route to the destruction of British India." It is obvious, therefore, that the hodiernal tendency to divide authority between two or more Departments of Government is not purely a post-War fungus.

It is highly interesting to note that Rich displayed not only interest in, but also great sympathy with, the minorities in Turkey. He was indeed a constant supporter of the Christian peoples—Armenian, Catholic, Chaldean, and Nestorian. The Armenians Rich held in particularly high regard; nor, incidentally, is there mention in this book of their oppression at the hands of the Turks—a lot which was to befall them later when the "sick man" became "sicker."

In 1811 Rich made an expedition to Babylon, and although he was not an expert archaeologist, the finds that he brought back with him form the nucleus of the existing collection of Babylonian and Assyrian antiquities at the British Museum. Later on he was to do excellent, though not epoch-making work at Nineveh.

Two years later he had his first leave, and, with his wife, who was a devoted consort, started out on post horses for Constantinople. This was really a considerable hardship, for physical comforts did not exist. They went by Kirkuk, Arbil, Mosul, the Shammar Desert, Nisibin, Mardin, Dierac, Diarbekr, Arghana, Ma'aden, Malatia, Sivas, Tokat, Amasia, Boli, the Sakharria, and Ismid. At the Embassy the Richs recuperated after their hardships in Anatolia, but after a short time moved on through the Balkans to Vienna. The details of Rich's stay in Paris and in Italy are good reading, for they show up well the versatility of the man, his love of music, of the historic past, and so on, but they cannot be told here.

Back to Baghdad Rich had to go in 1815-1816. Once more he went through Anatolia. Concerning this stay in Angora it is remarked: "European merchants there were none, all trade being carried on by agents for their chiefs in Constantinople or Smyrna, though formerly there had been French, Dutch and English factories." At Tokat he duly saw that the tombstone which he had ordered to be set up over the grave of the missionary Henry Martyn had been erected. This return route was different from that to Constantinople, for Rich wanted greater opportunity to examine ruins.

In 1816 Rich obtained some portion of that recognition which he deserved: he was made Agent for Turkish Arabia, having the Basrah Agency now under him. But the political atmosphere of Baghdad was poisonous. There

were factions in Turkey, troubles on the frontiers, civil war, practically, in Baghdad itself. Rich had, of course, to keep strictly neutral. This he most skilfully contrived to do, and Pashas might come and go without touching his increasing prestige. But he was worried financially, for the Company kept him short of money; he felt that he was being let down by his superiors; and, above all, he deplored the indifference of England to the British position in the East. In 1817 he wrote:—

There is an absolute indifference in England about the East. That a Government which possesses India should feel that way seems unaccountable. No one cares that we are pillaged by Arab pirates on the coast of India, or that the Russians are hard at work in Turkey and Persia, undermining our interests.

If Rich were alive to-day, would he not still be up-to-date?

But from these preoccupations Rich found occasional respite in the travels and antiquarian researches of which he was so fond. In 1820 he journeyed into Persian Kurdistan, and, as everyone knows who has read his "A Residence in Koordistan" (published in 1837) he contrasted the Persian Kurds very unfavourably with the Kurds of Sulaimani. (It is one of the few errors, by the way, made by Miss Alexander, that she talks of the Kurdish "dialect," as being something akin to the Turkish language).

Of the final dispute between Rich and the Pasha of Baghdad, in 1820-1821, there is no need to write: its romantic details have often been told before. Having once escaped, the Richs left Mesopotamia, in 1821, without much regret. At Bushire he parted from his wife, going on to Persepolis. There, in the city of Hafiz, his constitution, impaired by much mental anxiety and by fever, was unable to withstand an attack of raging cholera; and on October 5 Rich died. His remains were later taken to the Armenian Cathedral at Julfa, the Christian suburb of Isfahan. It was a fitting end to a man one of whose main interests had been the welfare of the Christians of the East, an interest sustained, not on political, but on moral or spiritual grounds.

We should be grateful to Miss Alexander for the pious but sober work which she has done in filling in the hitherto obscure passages in the life of one of the most notable men in the history of Mesopotamia, whose example and whose precepts are very far from being without applicability to the needs of to-day.

ANCIENT HISTORY IN PICTURES.

"THE CAMBRIDGE ANCIENT HISTORY. Volume of Plates II.' Prepared by C. T. Seltman. (Cambridge University Press, 9s. net.)

As our readers know, Vol. I of these plates illustrated Vols. I-IV of the Cambridge Ancient History. This volume illustrates Vol. V and VI. We regret more and more that the Editors should have decided to keep the plates separate from the text. There seemed to be some excuse in the thick first volume, especially as it really did form an interesting and easily followed historical record in itself. But surely there could have been no difficulty in incorporating the contents of this comparatively slim book in the two volumes of text to which it relates. To the reader of these volumes at the time of their publication such inclusion would have made his reading doubly interesting and instructive, while future readers will always be hampered by having to refer to another book. Nor does this volume retain the corresponding advantage which we observed in its predecessor. There is no very obvious continuous history to be learned from these pictures as they stand.

Enough, however, of fault-finding. For we have to thank the Cambridge University Press for a very useful and instructive book which will add much to the utility of the great work which they accompany. In most cases the subjects are well chosen and well produced. The latter quality, however, is not conspicuous in some cases. For instance, the photographs of the Hermes at Olympia do but little justice to the original. C. S-W.

NEWS IN BRIEF.

The Iraq Parliament re-opened on November 2.

The Turkish Grand Assembly opened on November 1 at Angora.

King Alexander of Yugoslavia left Belgrade with the Queen on November 3 for Paris.

In the Turkish National Assembly on November 1 a law was passed adopting the Latin alphabet and prescribing its general use.

Sayid Kasim Khan, Afghan Consul-General in India, has been appointed Afghan Minister in Rome.

A short but severe earthquake was felt in Smyrna on October 29. It caused no damage.

A pyramid, identified as that of Pharaoh Userkaf, first King of the fifth Egyptian Dynasty, has been discovered by Mr. Cecil Firth, of the Department of Antiquities, at Sakkara.

The new railway between Philippopolis and Stanimaka was inaugurated on November 2 by King Boris and the Bulgarian Prime Minister.

In an encounter with brigands near Beisan, in Palestine, on November 1, one policeman was killed and three brigands captured. The rest escaped into Trans-Jordan.

The Welsh Guards, under their new Commander, Lieutenant-Colonel Robert T. K. Auld, early in February will leave Chelsea Barracks for a tour of foreign service in Egypt.

Major Stoitcheff, who represented Bulgaria in the equestrian events at the last Olympiad, has been seriously hurt in a contest at the Sofia Hippodrome. The horse, which fell heavily, was killed instantly.

The Duke of the Abruzzi, who was at Addis Ababa for the ceremonies in connexion with the raising of Ras Tafari to the dignity of Negus, is leaving on an exploring expedition into the interior of Abyssinia.

The commemoration stone of the Lloyd barrage across the River Indus, one of the world's greatest irrigation schemes, was laid on November 3 by Sir Leslie Wilson, Governor of Bombay, at Sukkar, Sind.

The India Office announces that the King has been pleased to appoint Mr. Charles Henry Bayley Kendall, Indian Civil Service, to be one of the Judges of the High Court of Judicature at Allahabad, in the place of Mr. Justice Benjamin Lindsay, Indian Civil Service, who has retired.

Mr. Pandeli Ralli, J.P., of Belgrave Square, S.W., one of the leading members of the Greek merchant colony of London, an intimate friend of King Edward VII. and of Lord Kitchener, left £557,441, net personalty £550,553. He left among his bequests £2,000 to the Greek Church, Moscow Road, Bayswater.

According to *The Times* Basrah correspondent the War memorial to British and Indian soldiers fallen in the Mesopotamian campaign will not be unveiled on Armistice Day, as was at one time hoped. The panels containing the names have not yet been placed in position, but the work is expected to be finished about three months hence.

A survey party from Imperial Airways will leave England early this month for the Mediterranean to decide upon the exact location of the various bases for the Mediterranean section of the England-India air route. It will be headed by Flight-Lieutenant B. H. C. Cross, a Royal Air Force officer of long experience in marine air craft, who has resigned his commission to take up the post of manager of the Mediterranean section of the Imperial Airways.

THE WEEK AT HOME

London, Tuesday Morning.

Municipal Elections.

The Socialists are in high fettle over their successes last week in the Municipal Elections; the Conservatives appear to be correspondingly depressed, and as for the Liberals—well, they by this time are probably philosophical in face of disaster. But I do not think that these elections indicated as much as they are held to do in certain quarters.

In the first place, it was taken for granted that many more votes would be cast against the Government than previously: that always is so. But in the second place, it should be remembered that, while the endeavour of the Socialist Party is to identify local with national issues—and in such an endeavour they are said to be using the whole of their organisation—the Conservatives still are loth to confuse local with national administration. As a consequence of this indifference has grown up among conservative-minded people, who simply do not trouble to vote.

Whether this fact explains away the Socialist successes I cannot say. Obviously, if the Conservatives are to retain even their present portion of power, they will have to follow what I personally consider the very unfortunate lead of the Socialists in introducing party politics into local elections. When that has been achieved, but not before, it will be time to say that Municipal Elections faithfully reflect the probabilities of General Elections.

Conservatives' Anxiety.

It is impossible for anyone not inside the counsel of the Party to know how the Conservatives are feeling about things in general. One cannot help believing, however, that they are anxious. They appear to think that the de-rating proposals have quite failed to catch the imagination of the public (which is perhaps true), they realise that the increasing unemployment provides a very considerable handle to their opponents, and they are not too happy at the way in which votes have been cast in the by-elections.

At the session which opens to-day, the Government can hardly be expected at once to make a good show, for they have first to get over such apparently unfortunate incidents as the Naval Pact with France—a Pact for which there is abundant defence, which has, however, not yet been forthcoming in a convincing way.

Of course, Conservatives in official circles may be much more confident than would appear to the outsider. They would gain very considerably, however, if they could impress upon their supporters—and particularly during the session which begins to-day—the utter futility of mere opposition to Socialism. One does not like the scurrying desire that Liberals should link up with them so that "the real menace—Socialism" may be scotched. If the Conservatives have the right stuff in them, they themselves will be sufficient to prevent the access to power of the Socialists. In any case, you can no more scare the average English voter with proposals of Socialism than with proposals of Protection: for we are all pragmatists now!

The Primate's Farewell.

Last Sunday, in Canterbury Cathedral, the Archbishop preached his farewell sermon. The service, attended, it is said, by over 6,000 persons, was of that historic kind which writers of the future will love to recreate. For there is an element of fundamental tragedy—the tragedy which grips men in all periods—in the act of abnegation with his task unfulfilled.

But Dr. Davidson, so far from being depressed over his defeat in the matter of the Revised Prayer Book, stated his belief that the Church of England had evolved "a deeper and more thoughtful spirit of unity in purpose and in prayer than any we had known before." To those who can accept this conclusion, it will, coming from such a man and upon such an occasion, be doubly comforting.

The retiring Archbishop, upon whom has been conferred a temporal peerage, may not have been a profound

sin, but for his constant Christian attitude, his largeness of attitude in big questions, he has gained the admiration of very many men who differ profoundly from him theologically. I think that his utterances in the House of Lords will be heard and read with quite unusual respect in the future, because of the dignity of his departure from the great See of St. Augustine.

A Cigarette Temple.

One of the most important new buildings in London is the factory of Mr. Bernhard Baron, of Carreras, in Camden Town. From passing glimpses of it when it was in course of construction, one rather gained the impression that its Egyptian form and colour were badly out of keeping with the fitness of things. Not that one was unduly shocked, for the proclivity of a certain type to be over or flashily dressed is now so much taken for granted.

But whatever be thought of the outside of this tobacco factory (based on the Temple of Bubastis)—and I have not seen it since it was completed, the experts appear to be unanimous that its interior is all sweetness and light. The rise of Mr. Baron to fame and the quite extraordinary generosity with which he hands out large sums of money to charities have now impressed themselves upon the imagination of Londoners, who will be keen on seeing the temple in which the wonderful turnover is made.

Fog.

November has started most brilliantly true to type. Yesterday we had a very respectable fog—the worst of the year (so far)—although it seems to have been concentrated on the south side of London. This fact (which implied that working citizens from the north reached their offices in time, whereas the southerners were about half an hour late) will no doubt restart the interminable controversy of North versus South.

This depressing gloom is, however, being accepted quite cheerfully by the man in the street, who recalls the glory of the summer months and the beauties of the autumn, and says that whatever happens now "we mustn't grumble." But if we have more 'bus smashes and train delays, our memories, like our tempers, may become shorter.

Guy Fawkes Day.

It was bad luck for many a guy that he had yesterday such a dirty night on which to go to the stake. My impression was that this year the breed increased largely, whether because more poor children are in need of money or whether because we are indeed slowly returning to pre-War customs.

That, however, reminds me of the fact that, whereas in the (oh! so good) old days guys were always got up to represent somebody—Gladstone, Joseph Chamberlain, even Crippen,—nowadays the art of impersonality has reached a sublime degree. Can it be that our youngsters are actually unaware that politicians and public men still exist whose effigy is well worth a bonfire? This social feature must be due either to lack of education or to a sense of tolerance not commonly associated with tender years.

Grantchester Mill.

There are little losses that seem to stab the heart much more deeply than greater disasters. I think that there can be few Cambridge men who will not feel a wrench at the news that Grantchester Mill, the Mill of Chaucer and of Tennyson and of Rupert Brooke, was last week burned out entirely.

How many a punt and canoe have slipped on to the Upper River and dreamed their way up to the Meadows only the Cam knows. But now and then the mood of Rupert Brooke—

Ah God! to see the branches stir
At Grantchester, at Grantchester!
comes over the oldest of us.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

November 8, 1928 (New Style).

October 26, 1928 (Old Style).

Jumada I, 24, 1347 A.H., of the Muslim Calendar.

Marcheshvan 25, 5689, of the Jewish Calendar.

Admiral the Hon. Sir Stanley Colville has returned to London from Egypt.

Madame Ferid Bey, wife of the Turkish Ambassador, has left London for the Continent for a few weeks.

The Hon. Lady Jackson left London on November 1 to join the Ranpura at Marseilles for Bombay.

Viscount Chetwynd and the Hon. Eve Chetwynd left on October 31 for India, and expect to be away for about four months.

Field-Marshal Viscount Allenby arrived at 24, Wetherby Gardens yesterday (Wednesday) on his return from the United States.

Admiral Sir Heathcote Grant sailed in the P. and O. s.s. Comorin from Tilbury on November 2 for Port Sudan. Sir James Mills left for Port Said in the same vessel.

The Hon. Harold Nicolson will shortly leave Long Barn, The Weald, Kent, to resume his duties at the British Embassy in Berlin.

A lecture will be delivered at King's College, Strand, on November 22, at 5.30 p.m., by M. Marcu Beza, who will speak on "Roumanian Language and Literature."

Sir Robert Clive (his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran) was received in audience by the King at Buckingham Palace on October 30.

The wedding of Mr. Stanley L. Poole to Miss Phyllis Laylah Valentine Geere, elder daughter of the late H. Valentine Geere and of Mrs. Geere, took place at Trinity Church, Wimbledon, on November 2.

The Duke of Connaught, Grand Prior of the Order of St. John of Jerusalem, received Sir John Chancellor, the newly appointed High Commissioner for Palestine, on October 24, and conferred on him the insignia of a Knight of Grace of the Order.

Sir John Chancellor was the guest of the Executive Committee of the Palestine Mandate Society at Mrs. Dugdale's house, 1, Roland Gardens, on October 17.

Mr. W. E. D. Allen will lecture to the Central Asian Society on November 22 upon "Two Journeys in Georgia." The lecture, which is due to begin at 5 p.m., and will be illustrated, will be delivered in the Royal Society's Rooms, Burlington House, W.1.

Sir Edmund Wyldbore-Smith gave a luncheon at the Carlton Hotel on October 31 to meet Abdul Hamid Pasha Soliman, Egyptian Minister for Communications. The guests included: The Earl of Cromer, Sir Edward Crowe, Colonel M. R. C. Backhouse, Mr. Frank Cook, Mr. Follett Holt, Mr. F. C. Goodenough, Mr. Stanley Adams, and Ahmed Abboud Bey.

Major-General Sir Frederick Sykes was received in audience by the King at Buckingham Palace on November 3, and kissed hands upon his appointment as Governor of Bombay, when His Majesty invested him with the Insignia of a Knight Grand Commander of the Most Eminent Order of the Indian Empire. Major-General Sir Frederick and Lady Sykes subsequently had the honour of being invited to luncheon with their Majesties.

The Ranee of Pudukkottai arrived last week at Claridge's Hotel from the Continent.

Ex-King George, of Greece, visited the King at Buckingham Palace on November 2 and remained to luncheon.

Sir George Rankin, Chief Justice of the High Court of Calcutta, accompanied by his daughter, Miss Alison Rankin, will leave Marseilles in the P. and O. lines s.s. Razmak to-morrow (Friday) on their return to Calcutta.

The King and Queen received the Nawab and the Begum of Bhopal and the Maharaja of Jodhpur on October 30.

The Queen received the Maharani of Jodhpur on October 30.

Lieut.-Colonel Stewart Patterson who had the honour of being received at Buckingham Palace on October 30 by his Majesty, upon his appointment as Political Aide-de-Camp to the Secretary of State for India.

At a Council held by the King at Buckingham Palace on November 1 Viscount Peel received from His Majesty the Seals of Office and, having taken the Oath, kissed hands upon his appointment as Secretary of State for India.

Professor F. W. Thomas will read a paper to the Royal Asiatic Society on November 13, at 4.30 p.m., on "Some Documents and Languages from Chinese Turkestan." The meeting will take place at 74, Grosvenor Street, W.1.

Air Vice-Marshal Sir Robert Brooke-Popham (upon his appointment as Air Officer Commanding the British Forces in Iraq) had the honour of being received by the King at Buckingham Palace on October 31. He left London on November 1 for Port Said, travelling on the Ranpura via Marseilles.

The Maharaja of Kapurthala and the Tikka Raja of Kapurthala, the Nawab and the Begum of Bhopal, and the Yuverajah of Mysore, embarked at Marseilles on November 2 in the P. and O. s.s. Ranpura on their return to India.

Mr. Daly Stanford left Marseilles on November 2 for India, where he is going on a visit to the Maharaja of Kapurthala, the Maharaja of Mysore, and other Indian Ruling Princes. He will return next May to London *via* South Africa.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Bulgarian Loan.

As I suggested last week would be the case, the terms on which the Bulgarian Loan has been arranged are rather more unfavourable than those of the Refugee Loan of 1926. There is not much in it, however, as our Sofia Correspondent points out, though the figures at first sight like one of those strange mathematical puzzles, may seem to be very different. The coming loan is to bear $7\frac{1}{2}$ per cent. interest, and the London portion is to be issued at 96, the New York and Paris portions being issued respectively at 96½ and 98, the differences being accounted for by the varying stamp duties—another illustration of the incidence of taxation in this country. The Refugee Loan, on the other hand, was a 7 per cent. security and was issued at 92. The loan agreement has now to be ratified by the Sobranye, and provided no difficulty arises in this quarter it is expected that the loan will be issued about the middle of this month.

Greece's Refugee Loan Decision.

Nothing could affect a country's credit more adversely than the belief that the possibility exists that the terms of a loan may be subsequently altered, and when, shortly before the visit to this country of the Greek Prime Minister, M. Venizelos, it became known that the Greek Government was contemplating an alteration in regard to either the capital or the rate of interest of the 1926 Eight per cent. Internal Loan, great surprise was expressed that Greece should ever consider a policy which would be bound to impair her financial status abroad. In referring to M. Venizelos's visit, I suggested that it was probable that the views he would hear during his stay in this country would bring home to him the unwisdom of the proposed course. It is satisfactory to learn now that it has been decided not to interfere with the loan in question, but a subsequent loan of the same type will bear lower interest which, of course, is a different matter altogether and one to which no exception can be taken.

The Roumanian Loan.

Developments in Roumania have made it inevitable that there must be some delay in the conclusion of the negotiations for the stabilisation loan, but it may be hoped that the postponement will be very brief. The National Peasant Group, which is likely before long to obtain power, has shown itself to be keenly alive to the country's needs, and as far as the question of a loan is concerned it may be expected to take up the negotiations where they were left off. One point to which I referred last week in discussing the loan calls for reference. I mentioned a proposed alteration in the Mining Law, which, it was understood, had removed the hostility to the loan of the oil companies. It may well have been, however, a mere *ballon d'essai*, as no actual steps seem to have been taken in that direction

by the Government and one is left to infer that the main idea was to create a favourable atmosphere for the loan negotiations.

The National Peasant Group's Policy.

Of the policy of the National Peasant Group with regard to foreign enterprise there is fortunately no room for doubt. The proceedings of the Congress of the Group last July indicated clearly that the policy that will be pursued by the Group will be the encouragement of foreign assistance and not its hindrance. A feature of the Congress was the recognition of the adverse effect of the Mining Law and of the need for its emendation. Thus M. Michal Popovitch, in referring to what he termed the policy of "economic chauvinism" of the Government, stated that the Law had turned the whole foreign oil industry against them. Then the engineer, M. Hoiescu, in a report submitted at the Congress, emphasised the need for the reconstruction of the reserve of oil lands which has been exhausted by the development of known regions and by the suspension of works of exploitation owing to existing defects in the mining régime. He advocated the guaranteeing of concessions to those who undertake the work of exploitation and the granting to them of certain advantages. As regards foreign enterprise in general it is significant to note that he expressed himself in favour of equality of treatment as between foreign and native capital, and suggested the suppression of the special tax on the capital or revenues of foreign enterprises and the abolition of the regulation as to the proportion of foreign capital in new companies that may be established. One could give many further illustrations from the Congress proceedings of the broader vision of the Peasants Party, but those I have quoted will amply suffice to show that if the Group obtains office foreign enterprise in Roumania may, at any rate, hope for much more considerate treatment than it has received in the last few years.

BANK OF ROUMANIA LIMITED

L ET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

The Anglo-Persian.

At the meeting of the Anglo-Persian Oil Company, Sir John Cadman gave a most satisfactory report regarding the position of the undertaking. Dealing with the fields, he pointed out that the production from the wells at Masjid-i-Suleiman was 5,300,000 tons as against 4,800,000 tons for the previous year, and he anticipates that the output should exceed 5,500,000 tons for the current twelve months. He was further able to state that a most promising new area has been found at Haft Kel, about 50 miles east of Ahwaz. The first well in this area came into production in April with a yield of 800 tons daily, which, Sir John Cadman pointed out, is equivalent to a typical well at Masjid-i-Suleiman. He touched briefly on the future prospects for the company, and declared that if the view that oil prices have touched the low water mark is right, then they would be justified in anticipating not unsatisfactory results for the current year, "and that the succeeding year may inaugurate an era of steadily expanding profits."

Cotton Growing in the Sudan.

Crop conditions last season were, broadly speaking, unfavourable for the Sudan Plantations Syndicate, and, as will be seen from the report, extracts from which are given elsewhere in this issue, while the area under cotton was increased from 100,058 feddans to 105,587 feddans the crop amounted to only 80,995 bales as compared with 116,278 bales. The results obtained by the company, however, showed a slight improvement on those of the previous year, this being due to the fact that the price of cotton has shown a rising tendency. The net profits amounted to £587,401 as against £558,382, and the dividend this time will be 25 per cent. as against 30 per cent., but it is now paid on a much larger capital. Last year's dividend called for the distribution of £450,000, whereas the amount required this time will be £562,500. The carry forward this time will be £412,118, which compares with £419,042. These figures indicate plainly the progress of the company, and the strength of its position, and as for the current season the crop on a larger area is estimated at between 140,000 and 150,000 bales, shareholders have every justification in anticipating an improvement on the wonderful results already achieved by the company.

The Next Sudan Crop.

I mentioned above that the next Sudan crop of Sakel-larides is expected to be between 140,000 and 150,000 bales. The first estimate of the crop is actually 572,112 kantars, which represents roughly 143,000 bales. The estimate for American cotton also shows an increase at 86,349 kantars as against 61,846 kantars, or 21,312 bales as against 15,416 bales. On this basis the total production of cotton in the Sudan for the current season will amount to about 164,312 bales, which, in the circumstances, will be a very respectable total.

The Balkan Harvest.

The fact that something like famine conditions are obtaining in a part of Roumania, makes it seem a paradox to say that this year's harvest in the Balkans generally, has been a pronounced success. Yet such has been the case, and the explanation of the seeming inconsistency is

simply that this year's maize crop has generally been poor, but apart from that the Balkan harvest has shown a very appreciable improvement on that of last year. A few figures (representing in this case thousands of bushels) will suffice to show the position. Taking Roumania first the yield of the wheat crop was 130,496 as against 96,734, that of oats 64,262 as against 59,810, that of barley 75,628 as against 57,952, and that of rye 11,833 as against 9,323. For Yugoslavia the figures for wheat are 105,361 as against 56,568, for oats 26,713 as against 20,114, for barley 20,230 as against 14,449, and for rye 8,563 as against 5,923. In the case of Bulgaria also there is an increase in the case of every crop I have mentioned. The yield of wheat was 51,104 as against 47,346, that of barley 15,651 as against 14,041, that of rye 9,019 as against 8,243, and that of oats 9,382 as against 7,481. Only in Greece do any of the crops show a decrease. The Greek figures are 16,542 for wheat as against 16,106, 9,959 for barley as against 11,811, 8,514 for oats as against 7,078, and 2,337 for rye as against 2,420. Unfortunately the failure of the maize crop except in Bulgaria gives another side to the picture, for Roumania and Yugoslavia are two of the great producers of maize in Europe. Still the success, more or less general, of the other crops should go a long way to improving conditions in the Balkans and making the markets there in the next year somewhat more active than they have been.

Virginian Cigarettes for Egypt.

Attention is drawn by the Monthly Journal of the British Chamber of Commerce of Egypt to the remarkable growth in popularity of Virginian cigarettes in Egypt in the last few years. As in the case of so many other changes in the world it was the War which was responsible for the real introduction to that country of the Virginian cigarette which had hitherto been practically ignored there. The extent to which the Virginian is finding favour can be seen from the fact that the imports for 1926 and 1927 were respectively 171,738 kilogs. and 192,121 kilogs. For the humble Virginian it is a distinct triumph in a terrain particularly favourable for its Turkish and Egyptian rivals, and it is very satisfactory to know that practically all the Virginians imported come from the United Kingdom.

COMMENTATOR.

MOTOR CARS IN GREECE.

Even if the Balkans had a good system of roads the nature of the terrain in general would serve to explain the slow growth of the use of motor cars in the various countries. Of Greece it is true to say that the War really introduced the motor car to the country, and since 1918 there has been a rapid increase in the importation of motor cars, tyres, and oil. The value of the imports of motor cars in 1919 was no more than 9,038,052 drachmæ, but for 1927 it was 150,812,632. The imports of tyres have undergone a similar expansion, their value rising from 2,321,936 drachmæ for 1919 to 60,686,039 drachmæ for 1927. The figures for oil consumption are also very significant, the value rising from 3,227,041 drachmæ for 1919 to 266,144,255 drachmæ for 1927. As good progress is being made with road construction in Greece it may be anticipated that the use of the motor car will greatly develop there in the next few years.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

TRADE OF MUSCAT INCREASING.

The value of Muscat's trade for 1927-28 was £518,944, as against £474,202 for 1926-27, an increase of £44,742. The total for imports was £370,659, while the value of the exports was £148,285, the respective totals in the previous year being £326,934 and £147,268. The chief items in the imports were rice, £160,622, cotton goods £51,465, and coffee £36,079, while as regards exports dates were responsible for £92,529, dry and salted fish for £22,805, and sardines for £10,611. The principal contributors of the imports were India with £293,402, Singapore with £30,974, Persia with £18,513, and the United Kingdom with £13,878, while the chief importers from Muscat were India £100,617, Ceylon £21,436, and the United States £10,520. During the year 126 steamships of a net tonnage of 406,093, and 107 sailing vessels with a tonnage of 11,808 entered and cleared the port. Of the steamships 116 were from India, 4 from the United Kingdom, and 6 from the United States.

FOREIGN EXHIBITORS AT SMYRNA FAIR.

The British Consul-General at Smyrna reports that a larger amount of space was occupied by foreign products at the "Ninth of September" Fair at Smyrna than in 1927. The number of exhibitors was 516, of whom 155 were foreign, the principal being:—German, 61; Italian, 35; Russian, 16; French, 11; British, 8; Swiss, 5; Czechoslovak, 4; Hungarian, 2; Austrian, 1; Belgian, 1; Swedish, 1; and Yugoslav, 1.

The chief British exhibits were gas cookers and fittings, agricultural machinery, Scotch whisky, gramophones, safes, cutlery, copying machines, chocolate, biscuits, and safety razors. Whole rooms were devoted to exhibits of Swiss weaving machinery, to Austrian pianos, and German typewriters, sewing machines, bicycles, surgical accessories and tools. Large stands were occupied by foreign gramophones, foodstuffs, telephone apparatus, insecticides, whisky, and assorted small manufactured articles, mostly German.

There was also a well-organised and representative display of Italian manufactures, as well as a large number of American and German exhibits displayed by local agents. Agricultural machinery from Czecho-slovakia, Austria, Hungary, and Canada was also on view. The Soviet Trade Delegation's exhibits at the Exhibition were for the most part those forming a permanent exhibition in their offices in Smyrna. These included oils, coal, sugar, rubber, pottery, cement, chemicals, and caviar.

The King of Afghanistan has ordered the appointment of a foreign adviser to organise the Department of Finance, while the Afghan Ministry of Education has been instructed to open a school where instruction will be given through the medium of the Turkish language to train students for admission to the Turkish Military Academy in Constantinople. Precedence by warrant is being abolished.

Yugoslavia's wheat harvest is estimated at 2,880,000 metric tons. For internal consumption 1,200,000 tons are required, for sowing about 350,000 tons, making 1,550,000 tons, but it is thought that a further 500,000 tons must be added to this total owing to the relative cheapness of wheat over maize. There will remain, therefore, for export some 830,000 tons.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Steam Lorry.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of three steam lorries required for the Department. December 15.

Steel Book Cases.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of 115 steel book cases for the Royal Library in Cairo. December 31. (D.O.T.)

Saddlery, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of various articles such as saddlery, fire-engines accessories, rest-house necessities, leather. November 24.

Microscopes and Accessories.—The Department of Public Health, Egypt, invites tenders for the supply and delivery of microscopes and accessories. November 15. (D.O.T.)

TURKEY.

Generator.—The Direction Générale des Chemins de Fer et ports d'Etat invites tenders for the supply and delivery at Haidar Pacha of a steam engine driven A.C. generator of 600 K.W. November 28. (D.O.T.)

Field Telephone Wire.—The Direction-General of Posts, Telegraphs and Telephones, Angora, invites tenders for the supply and delivery of 50,000 metres of rubber-covered field telephone wire. December 18. (D.O.T.)

Saw Milling Plant.—A Constantinople concern is anxious to acquire the following plant as soon as possible:—(1) steam power driving plant for driving saws, etc., for an annual output of 50,000 cubic metres which it is proposed to increase later to 100,000 cubic metres. Only wood will be consumed as fuel in the factory; (2) two horizontal log saws; (3) one vertical log frame saw; (4) two circular swing saws, for logs. (D.O.T.)

Aerodrome.—Tenders are required for the construction and equipment of an aerodrome on a site in Anatolia. Details must be submitted to the Ministry of Defence by November 15, 1928. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, November 15); s.s. Matra for Calcutta (Birkenhead, November 22).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 14).

British India Line.—S.s. Mundra for Bombay and Karachi (London, November 10); s.s. Merkara for Colombo, Madras, and Calcutta (London, November 17); s.s. Hatimura for Bombay and Karachi (London, December 1).

Cunard Line.—S.s. Bothnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow and Swansea November 8, Liverpool November 10); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz and Ancona, if inducement (Liverpool November 24, and Swansea November 2); s.s. Bantria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow, Swansea and Liverpool, December 8).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, November 9); s.s. Perim for Calcutta (London, November 10).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 17); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Cyprus (Manchester, November 24).

Ellerman and Papayanni Lines.—S.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Venice, Trieste, and Fiume (Swansea, November 10); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 10); s.s. Volturno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 17); s.s. Mardinian for Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool November 17, Swansea November 17); s.s. Algerian for Algiers*, Smyrna, and Constantinople (Liverpool, December 1). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 6.

The outstanding event of the week—which was not a complete working week, the Stock Exchange being closed on Thursday, November 1—was a set-back in the price of the highly speculative securities. There were considerable falls among many shilling shares and dealing was not easy, sellers being largely in excess of buyers. Whether the upward movement will be resumed shortly remains to be seen, but there can be no doubt that a reaction was over-due. In many cases the advances in quotations had proceeded to absurd lengths, for they bore no reasonable relation to earning power. The Stock Markets will, therefore be healthier for a breathing space. It is to be hoped, moreover, that it will last long enough to enable speculators to make a careful survey of the position and realise the extreme danger of a similar movement following that of the past few weeks. In the circumstances the quotations of investment stocks remained fairly firm, gilt-edged securities in particular showing strength. Good industrial shares have not lacked support, but the more speculative markets, including oils, mining, etc., have mostly been featureless. Despite the removal of restriction, however, rubber shares are well maintained. The new capital issue market shows some recession from the recent exceptional level of activity.

Life Assurance as an Investment.

The British insurance companies are making life assurance increasingly attractive. Thus two well-known mutual offices have recently announced considerable reductions in the rates of premium charged for non-profit assurances. This tendency is apparent in the world of life assurance as a whole. In these circumstances, it might seem to be explaining the obvious to draw attention to the merits of life assurance as an investment. But the evidence indicates that this is not the case. Britain, in fact, is considerably under-assured as compared with some other countries; and this is the less excusable since Britain is on the whole admirably served by its insurance companies. It has been well said that the first duty of the investor who has dependents is, after providing for the necessities for existence, to assure his life. And, apart from being

a duty, it is a sound investment. Assuming that the company has been chosen carefully, life assurance gives a good return; there is no danger of capital depreciation and other anxieties inseparable from Stock Exchange investment are absent; and it involves compulsory saving. Moreover, the policy is often useful as providing security for a bank loan, while most policies have a known surrender value—that is to say, in the event of the policy holder being unable to continue the payment of his premiums some return is made to him. There are various secondary attractions in policies, some, for instance, being issued in connexion with house purchase facilities.

An Important Iron and Steel Fusion.

The heavy industries of this country, including the coal and the iron and steel trades, have been well advised to embark upon a policy of "rationalisation." There is welcome evidence that the industries are realising, if somewhat tardily and grudgingly, the merits of "rationalisation," a further important scheme having been announced during the week. Thus proposals involving the amalgamation of the South Durham Steel and Iron Company and the Cargo Fleet Iron Company, having combined assets exceeding £5,000,000, have been submitted to the shareholders. These concerns are already closely connected, being members of the Furness group, but actual amalgamation is expected to result in important economies. The companies, and especially the South Durham undertaking, are noteworthy for the comparative soundness of their finances, which is mainly attributable to their prudent policy with regard to capital during the boom years. The South Durham Company, despite the severe and prolonged depression in the heavy industries, has throughout made a return to its ordinary shareholders, the last distribution being 5 per cent. In these circumstances, the company's $4\frac{1}{2}$ per cent. perpetual debentures, returning £5 18s. per cent. and the 6 per cent. cumulative preference shares, yielding £6 per cent., deserves the investor's careful attention. It is believed that the combined undertaking, under any reasonable conditions of trade, will be able to earn a fair return on the ordinary capital. The terms of amalgamation appear equitable.

Electricity Supply Shares: the Present Position.

We have frequently recommended the shares of electricity supply companies in this column. There is now a tendency, however, for buying to be based on hopes which may easily lead to disappointment. The current yield on the majority of the leading London and provincial companies has fallen to a low level, often being under 4 per cent. Clearly there has lately been a considerable rise in share values. Indeed, the question arises as to whether the more recent advances are fully justified. Several considerations, it would seem, have prompted the buying. First, there are hopes that the companies, owing to expanding business, will have to increase their capital, which will be raised on bonus terms. This has already been done on a fairly large scale and cannot continue indefinitely, since capital will not be raised regardless of whether it will earn a return. Secondly, it has been suggested that when the national scheme is in operation the companies will be able to effect substantial economies. To a large extent, however, these economies have been anticipated and too much should not be hoped for in this direction. Thirdly, the possibility of American buying for control has been held out as an attraction. The present signs seem to indicate that further action on these lines is improbable. In all, therefore, many electricity supply shares are, to say the least, fully valued for the time being.

The Customs duty on maize imported into Roumania has been suspended until May 1, 1929.

The production of the Dacia Romano Petroleum Syndicate for October was 3,120 tons.

THE BULGARIAN STABILISATION LOAN.

(From Our Own Correspondent.)

Sofia, October 10.

The loan which the Bulgarian Government is about to conclude for the stabilisation of the currency will provide, in conformity with the decisions of the Finance Committee of the League of Nations, under whose auspices the transaction is being carried out, a net yield of £5,000,000 or 3,365,000,000 leva plus the amount allocated for the necessary reconstruction works in the regions affected by the recent earthquake. Of the loan one-fifth will be issued in Paris, two-fifths in New York and two-fifths in London, with the participation of the Rome, Amsterdam, Berne, Brussels, Prague, and Stockholm markets.

The loan will bear interest at the rate of $7\frac{1}{2}$ per cent., and will be issued at 98 in Paris, at $96\frac{1}{2}$ in New York, and at 96 in London and in the other countries mentioned, the difference in the rates of issue being due to the unequal stamp tax in the three chief centres. As the duration of the amortisation of the loan is forty years the yield, allowing for redemption, is 8.40 per cent., or a little more than that of the loan concluded in 1926 for the establishment of the refugees, the yield of which was 8.36.

In view of the present unfavourable conditions of the money market, which should improve, the Government has reserved the right to carry out a conversion of the loan after ten years. Further, it has obtained the immediate disposal of the whole yield of the loan except for 800,000,000 leva, which will be expended in accordance with the needs for the development of the railway system, whereas the yield of the Refugee Loan was only remitted progressively, after the justification of the expenditure incurred by the respective services for the settlement of the refugees.

In conformity with the Protocol of the Finance Committee of Geneva the proceeds of the loan will be utilised as to £1,500,000 to strengthen the position of the National Bank by the repayment of a part of the floating debt of the Treasury, as to £650,000 to provide new working capital for the Agricultural Bank (£500,000) and Co-operative Bank (£150,000), as to £1,250,000 to improve communications, and as to £1,100,000 for Budget arrears—without taking into account the £500,000 specially allocated for the relief of the distressed regions.

CONFERENCE FOR THE LIMITATION OF EXHIBITIONS.

The British Government is sending delegates to an international conference which opens in Paris on November 12 for the purpose of discussing the question of the limitation and regulation of the number of international exhibitions and for concluding an international convention on the matter. A convention on this subject was signed at Berlin in 1912 but owing to the outbreak of War before ratifications had been exchanged, the convention never came into force. The main object of the conference will be to seek to limit strictly the long period general exhibition, which is organised in many cases primarily for sentimental reasons, and where the commercial results likely to accrue to participants do not repay the cost of sending a creditable exhibit. It is understood that the British Government takes the view, after consultation with trade interests, that the short period trade exhibition or fair stands in a different category and in the main is a valuable aid to business.

The British delegates will be Sir Edward Crowe, C.M.G., Comptroller-General, Department of Overseas Trade, Colonel H. W. G. Cole, C.S.I., Director, Exhibitions Divisions, Department of Overseas Trade, Mr. J. R. Cahill, C.M.G., Commercial Counsellor, British Embassy, Paris. The delegates will be accompanied by Mr. W. E. Beckett, Assistant Legal Adviser, Foreign

Office, Mr. Guy Locock, C.M.G., who has been nominated by the Federation of British Industries and by a representative of the Association of British Chambers of Commerce, and by Mr. L. A. de L. Meredith, O.B.E., and Mr. A. I. Schué of the Exhibitions Divisions, Department of Overseas Trade.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date October 31:—

Currants.

October generally witnesses the heaviest trading of the year, and although the opening days failed to justify the high hopes indulged in, the prevailing feeling was that as time passed the movement would gain momentum and finish in a blaze of glory. Unfortunately, these anticipations were not realised and buyers seemed settled in their policy of confining their requirements and purchases to the narrowest limits. With the arrival of Lesbian and Bactria a good selection of all grades was available, but buyers continued to deal very cautiously, prices easing to the extent of 1s. on the medium grades and 2s. to 3s. on best qualities. Sales were:—Pyrgos, 49s. to 49s. 6d.; Amalias, 50s. 6d. to 51s. 6d.; Patras, 52s. to 53s.; Gulf, 54s. to 56s.; Vostizza, 57s. to 64s.

This depressing state of affairs continued, buyers operating on a very small scale, and holders showing willingness to make concessions to encourage operations. Prices weakened still further, more noticeably in the first qualities of Vostizza. These disappointing conditions continued right to the close. Roumelian and Polo came to hand when there was little left of the month to run its course, but the excellent assortment they brought quite failed to stimulate demand. Closing prices show very little change from those ruling midway through the period under review. The key to the situation undoubtedly rests with Greece, and when a definite announcement is made that prices of the lower grades cannot fall below the minimum guaranteed, buyers will be more likely to operate with confidence. Closing quotations:—Pyrgos, 48s. to 48s. 6d.; Amalias, 49s. to 49s. 6d.; Patras, 50s. to 51s.; Gulf, 53s. to 56s.; Vostizza, 54s. to 62s.

Sultanas.

Smyrna.—There has been no improvement in the demand. The small quantities arriving were quite insignificant as compared with what the market is usually accustomed to, but were more than sufficient to meet requirements, and with c.i.f. quotations on a lower basis day by day, buyers exercised extreme caution in their purchases. Business was transacted in medium at 48s. to 52s.; gool, 54s. to 58s.; fine, 60s. to 64s. Some trade was also done in afloat parcels.

Cretans.—Colour parcels attracted attention and sales were put through during the voyage at 61s. to 80s.

Greeks.—Small shipments have come to hand and been disposed of at 60s. to 68s. and up to 75s. and 80s. for best colour lots.

Figs.

A slight falling-off in the demand has been experienced. Best quality sells readily, but inferior lots are more difficult to place. Large boxes Layers, 52s. 6d. to 80s.; small boxes, 67s. 6d. to 82s. 6d.; Locoums, 90s. to 135s.; pulled, 45s. to 52s. 6d. Bags gennuines, 32s. to 36s.; choice, 38s. to 40s.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows on the position of the market there for the week ended October 27:—

Sultanas.

The estimated sales to date total 29,100 tons, against 30,750 tons for the corresponding period of the previous year.

Closing prices Smyrna, per cwt. c.i.f. London, for types 12 to 18 are:—29s.; 30s. 6d.; 33s.; 36s.; 41s.; 45s.; 54s.

Market Conditions.—The market is very quiet. Demand, as usual at this time of the year, is slow, and is likely to continue so over the next few weeks. A recent census of stocks still remaining in this country shows the quantity at date to be about 14,000 tons.

Prices, in spite of lessening demand, show no appreciable variation, quotations in foreign equivalents fluctuating more according to rate of exchange than on actual market differences.

Figs.

The estimated arrivals on the Smyrna market since the opening of the season total 24,000 tons, against 21,547 tons for the corresponding period of the previous year; estimated sales to date total 23,200 tons, against 21,432 tons.

Market Conditions.—Arrivals are practically at a standstill. Small operations are being effected from balance stocks held by Smyrna dealers.

The Turkish Government has decided upon the extension of the Angora-Sivas railway to Erzerum.

Engineering Topics.

By G. B. B.

Soil Solidification.

Many expedients have been resorted to at times by civil engineers, who have had to carry out work in loose, soft, or sandy soil, with a view to rendering it sufficiently solid or compact for working upon, but a new method is being employed in connexion with the construction of the new underground railways in Berlin. Here the soil is peculiarly loose and friable, and in order to solidify it, two solutions, one with a large percentage of silicic acid and the other containing certain soluble salts, are successively injected, by pressure pumps and probing jets, into the sand. The first solution serves solely to impregnate the soil, whilst the second starts a number of chemical reactions as soon as it meets with the silica of the sand and the free salicic acid, and various silicates begin to form, eventually turning the loose sand into a mass almost as solid as rock. It is said that the method is specially suitable for using with soils containing acids or saline constituents, as the presence of these renders it unnecessary to incorporate any of them into the injections. An analysis of the soil will show at once whether its chemical constituents will exert a favourable influence or otherwise on the chemical re-agents involved. We have yet to ascertain the relative economic advantages of this method of solidification, and at first sight it would seem probable that the cost would be excessive. Everything, however, depends on whether the soil is or is not rich in any of the chemical constituents required for the process. Another factor to be taken into account would be the water content of the soil.

Use of Silicates.

Whilst on the subject of solidification and the use of silicates it may be mentioned that in many parts of France sodium silicate is being largely used in steel surfacing work, particularly in places where the traffic is not unduly heavy. It would certainly seem that a lesson from French practice might be taken by some of our rural surveyors, as there are many country roads in the south of England where the conditions would seem favourable for this "water glass" treatment. It is said that, for the work to be successful, the stone should be a good quality of limestone and that it should be free from any appreciable quantity of siliceous matter. In practice, it is usual to take the stone out one year before use, so that it may be entirely free from dirt or clay when it is put on the road. Anything of the kind adhering to the actual stone impairs the success of the process. It would seem, however, that where modern plant is used for stone getting, washing would be an ample precaution to take, and so the delay of waiting would be avoided.

The stone used on the first course is such as will be rejected by a 1½ inch mesh and will pass freely through a 2½ inch mesh. This course is rolled after being laid. A filler, made of small stones, chippings of limestone, crushed rock or sand, is then thoroughly mixed with commercial sodium silicate in the proportion of about 10 gallons of 58 degrees Be. S.S. to each cubic yard of fine material, the mixing being done either by stirring and turning with shovels, or in a concrete mixer.

The slurry or mortar thus produced is spread evenly over the rolled stone and rolled in, as heavy a roller as possible being used. In an alternative method the loose stone on the road is not rolled before the slurry or mortar is laid on the top, and in that case the coarse stone and the binding mortar are mixed together with a fork. Another method, but one which, although simpler and

cheaper, does not give so good results in practice, is to mix the coarse stone, the chippings, and the sodium silicate solution together in a mixing trough or concrete mixer and pour it out on to the road, afterwards rolling it down. In any case, no matter which process is adopted, the rolling must be done thoroughly. During the rolling operations the sodium silicate and the limestone slurry come to the surface in yellow patches, and the rolling should be continued until this colour becomes uniform over the surface. After a little time for drying the road is ready for light traffic and in a few days is ready for any ordinary loads. One advantage of this type of road is that should the surface become broken, it is self-repairing, provided it is wetted to a certain extent. The wet patch will either smoothen or re-set, or, if new chippings be applied, the wet patch will bind them in place.

Electrification in Ireland.

The Irish Electricity Supply Board has advanced the electrification of the Greater Dublin area another step by placing the contracts for the low tension distribution network. The contract was open to Irish, English, and Continental firms and it is interesting to note that it was secured by Messrs. Callenders Cable and Construction Co., Ltd., of London. The actual work of cable laying and construction will begin in the coast towns in about six weeks time and should be completed by the middle of next summer. A large amount of local labour will be employed. This contract represents the final stage in that section of the work, as it provides for the network that will carry electrical energy into the consumers' premises. The Board hopes that by the beginning of next August there will be no part of the Greater Dublin area in which it will not be possible for a supply of electricity to be obtained.

The Aboukir Company intends to pay off on December 1 next its Six per Cent. First Debentures due on that date.

More than £1,000,000 is to be spent on improving and extending existing telephone facilities in Yugoslavia.

Some pillars and other remains of a temple, probably built by Solomon, have been discovered at Hazor by Professor Garstang's exploration party.

An Athens message states that M. Venizelos received Mr. Charles Hambro, of Hambros Bank, on October 26 on the subject of the bank's offer of a loan for municipal and other works.

Company Meeting.

ANGLO-PERSIAN OIL COMPANY.

Further Increase in Production.

Position of the Industry.

Sir John Cadman's Address.

The nineteenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held on November 6 at Winchester House, Old Broad Street, London. Sir John Cadman, K.C.M.G. (chairman of the company), presided.

The Secretary (Mr. John Clark) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—Before proceeding to the business of this meeting I have to refer, with great regret, to the death of Admiral Sir Edmond Slade, which took place on January 20, 1928. As a member of the Board since 1914 and Vice-Chairman since 1916, he had taken a very active and enthusiastic part in promoting the fortunes of the company and the welfare of its employees. To a very kindly and courteous character he united a wide range of knowledge and experience, which were always at the company's service, and his loss we all deeply deplore.

In accordance with the usual custom, you will no doubt allow the report and accounts to be taken as read. My first observation relates to the warning given last year to the effect that, failing some improvement in prices, a reduction in profits was inevitable. Events have shown that warning to have been well-founded.

Reference to the profit and loss account shows that the company's net profits have, in fact, fallen by just over £1,500,000. There has been a considerable drop in the value of almost every oil product throughout the world and, more particularly, a succession of falls within the United Kingdom in the wholesale price of motor-spirit aggregating no less than 4d. per gallon, or £5 a ton, as between February and August, 1927. In these circumstances, the fact that, serious though it is, the effect on the profits is not greater, affords remarkable proof of the company's inherent strength and of the success of the measures taken to bring about permanent economies.

The extra allowance for depreciation has been maintained and the usual allocations have been made to amortisation and debenture stock redemption reserve. £500,000 have been added to the general reserve, bringing it up to over £2,000,000. After deducting these appropriations, there is a sufficient balance to enable us to pay a dividend of 7½ per cent. on the ordinary shares. During the year a considerable amount of capital outlay has been incurred in work—almost all of it revenue-earning—upon refineries, tank installations, and equipment, but nearly the whole of this expenditure has been covered by the amount set aside for depreciation. It was not possible to establish the provident fund on its amended basis during the year, but, as will be seen, we had invested over £700,000 in securities. These have since passed over to the new Provident Trust Company.

The financial year ends on March 31, but owing to the length of time required to complete and audit the accounts, it is impracticable to hold the annual general meeting until after the holiday season. Feeling that it would better suit the general convenience if the annual meeting could be held earlier than is possible at present, the Board propose to alter the period of the financial year so that it shall coincide with the calendar year. The first complete year will, therefore, if you approve, commence on January 1 next and the next accounts will be for the nine months ending December 31 next.

Production.

Persia.—There is nothing but good to report of the producing zone at Masjid-i-Suleiman. Production during the past year, estimated to exceed five million tons, was 5,300,000 tons. It is still continuing to increase at the steady rate which has characterised operations for some years past. In the current twelve months the output should exceed 5,500,000 tons, but the potential annual output is of course very greatly in excess of this figure.

As indicated last year, drilling at Masjid-i-Suleiman has been confined to marginal tests. This drilling has been very successful in proving an important extension of the oil field. As an outcome of the continuous application of scientific methods to the examination of this field, I am able to state that its structural complexities have been so successfully studied that full reliance can now be placed upon calculations as to the magnitude of the oil reserves.

The Fields Department continues to operate with a competence and precision of effort worthy of high praise. Masjid-i-Suleiman, although still the chief centre of field activity in Persia, has now become a well-balanced production centre, with an ample supply of wells, and little further drilling remains to be done to complete the delimitation of the field. In future, the principal drilling, though still controlled from that centre, will therefore take place on new areas under test or development.

Few can readily realise the amount of effort, tireless and prolonged, which is necessary before a new oil structure can be discovered in zones most suitable for development. In a search during which no fewer than nineteen areas were drilled, no marked success was obtained until recently. But I am happy to inform you that an area, which justifies a high measure of optimism, has now been

found at Haft Kel, situated about fifty miles to the East of Ahwaz (the central station on our pipe-line system) and about fifty-five miles south-south-east of Masjid-i-Suleiman. In April last the first well came into being with a production estimated at 800 tons daily, which is comparable with a typical well at Masjid-i-Suleiman. It has of course been closed in, and drilling is now proceeding to test the dimensions of the structure. This field will be linked to the pipe-line at Kut Abdullah, a little south of Ahwaz. Its proximity to administrative centres at Masjid-i-Suleiman and Ahwaz, and the absence of engineering difficulty, will materially contribute to a co-ordinated and relatively inexpensive scheme of development. Haft Kel is 1,500 feet higher than Kut Abdullah, and on account of the gravity head, no expense for pumping plant is entailed.

Drilling on other test areas is progressing steadily, but results so far do not warrant any definite forecast. Surface evidence has often proved to be entirely misleading, and for this reason the most recent knowledge which geophysical science can provide has been brought into use. It may interest you to know that by creating a miniature earthquake with explosives, the earth tremors produced can be traced by seismic instruments, from the records of which the pressure of oil deposits and their approximate depths can be determined. In course of time this scientific method is likely to play an increasingly important part in discovering the position of new fields.

During the year an extension, from Iraq into Persian territory, of the Naft Khana oil-bearing zone, under concession to the company, has been definitely proved. This has introduced an element of complexity, since here is an oil field bisected by the frontier line of two nations, and governed by the terms of two separate agreements. It is hoped, however, that it will prove possible to find means of lessening the difficulties inseparable from a situation of this kind, and so, by evolving one administrative unit instead of two, secure the benefit of the most economical methods of operation.

Turkish Petroleum Company.

Iraq.—In connexion with the recent Press announcement that the American group have now formally taken over their holding in the company which operates the Iraq petroleum concession, I should like to take this opportunity of saying that we welcome them warmly as collaborators with us and the other groups concerned in that great enterprise.

Its constituent groups are now five in number—four major groups, each holding 23½ per cent. of the share capital; and one other group holding 5 per cent. In order to facilitate the participation of American interests in the enterprise, the Anglo-Persian Oil Company have given up half their former holding at cost price, and will receive as consideration 10 per cent. of the production of crude oil free of cost.

The Iraq company is now in a position to build upon an exceptionally wide basis of technical and commercial experience. May I also add that I am full of hope that close intercourse between the representatives of so many important groups, meeting in one council chamber to forward the interests of a single enterprise whose well-being is of common concern to them all, will not be without its effect in promoting a spirit of amicable understanding throughout the yet wider sphere of the industry in which they meet competitively.

Recent drilling in Iraq has met with decided success, but many of the wells are comparatively deep, gas pressures are high, and rapid drilling is not easy. Much remains to be done before the path is cleared for final schemes of development; but the future is bright with promise.

Albania.—Although drilling operations in Albania have been continuous throughout the year, they have been attended with little success. The quality of the small production hitherto obtained is by no means good, and the wells now being drilled have so far afforded no great reason for optimism. In the light of new data secured by the drill the whole of the geological evidence is undergoing re-examination, and in this examination we are fortunate in being able to collaborate with our Italian friends who are also drilling in the country.

Refineries.

Considerable further progress has been made in adapting our principal refineries, both by improvement and expansion, to the heavier demands imposed on them by our growing marketing organisations, and by the need for keeping abreast of every new development in contemporary practice. A notable change has been effected in the distillation of the crude oil, which now involves a single, instead of a double, operation. The general modernisation of the plant, in order to keep pace with current ideas, has also introduced greater elasticity into the whole process, thereby much facilitating the manufacture of a wider range of products. On the refining side, as distinct from the initial work of distillation, a considerable amount of development work has been done and methods of treatment have been improved and simplified, with a consequent reduction in operating costs.

Shipping.

The vessels of the tanker fleet have followed the normal course of their employment and there is no serious loss to record. The building programme, to which allusion was made last year, has made good progress, and all but one of the vessels laid down are in service.

The new motor vessels included in the programme are running satisfactorily, and, in general, these new ships represent the finest development of the modern tanker. On the efficiency of the tanker fleet and marine personnel we can justly continue to pride ourselves.

Reference to the tanker fleet naturally leads me to speak of the navigable conditions prevailing in the approaches to Abadan. This is a subject on which very definite progress falls to be recorded. The port of Abadan has become one of very great importance and activity. More than 600 ships clear the port annually. At the beginning of the company's operations, so restricted was the depth of the channel that no less than 70 per cent. of each cargo had to be lightered to partially loaded tankers lying outside the bar—50 miles from Abadan. The vexatious delays to ocean-going traffic, the congestion at the port, and the resultant expense need no emphasis.

Comprehensive surveys of alternative approaches carried out by the Iraq Government revealed the possibility of dredging a new channel then forming to the east, since known as the "Rooka" channel. Two-and-a-half years' dredging on this channel has enabled us to reduce the very expensive lighterage system to 4 per cent. only of the cargo carried; and we are within sight of the completion of a passage whose ultimate use will practically eliminate it. Obviously, this result is one of the greatest possible value to the company.

Distribution.

I am able to record a continuance of satisfactory trading by our "B.P." distribution organisation in this country. The volume of sales has been on a satisfactory level, whilst expansion has been particularly gratifying in the case of "B.P." motor spirit. The expenses of distribution, which constitute a very formidable item in the cost bill, have been sensibly reduced; and yet further reductions are in prospect.

Reference was made last year to the Board's intention to emphasise the identity of the "B.P." brand of products with the Anglo-Persian Oil Company's organisation. Action has been taken with, it is believed, notable success, and there should be few people to-day who do not know that "B.P." petrol is the Anglo-Persian Company's spirit.

On the continent of Europe, in India, and elsewhere, the company has entered into new and important marketing arrangements, which should very definitely contribute towards continued business expansion. Steady progress has been made during the year by affiliated concerns on the Continent, which are disposing of increasing quantities of products.

Persian Relations.

The appointment of a Resident Director in Persia, with headquarters at Teheran, has done much to facilitate friendly understanding and the prompt settlement of important questions with the Persian Government.

You will be glad to hear that His Imperial Majesty the Shah has himself shown very great interest in the company's activities. We recently learnt that he proposed shortly to visit the South of Persia, and we are hoping that, notwithstanding the very many calls on his time, he will find it possible to take the opportunity of inspecting some of the company's operations. It is gratifying to feel that the example, originally set by His Majesty a few years ago, and since followed by various Persian statesmen and notables, has done much to stimulate national interest in the company's work. Feeling, as we do, that the distance which separates our principal centres from the most important cities of Persia, particularly the capital itself, occasionally prevents full understanding of the nature and extent of the company's operations, and appreciation of its great value as a factor in the economic advancement of Persia, we sincerely trust that such visits will be often repeated. They can be productive of nothing but good.

The plan of the Persian Government, now being put into operation, for the construction of a railway between the Caspian Sea and the Persian Gulf is a matter of common knowledge. It is a great scheme, involving many technical and economic problems of the highest importance. It is intended that the southern section of this railway shall pass near, or through, certain districts where this company is at work; and it will devolve on us, as progress continues, to determine in what respects it may prove feasible to assist Persia by making such maximum use of the railway as may be consistent with the technical needs and economic well-being of the company itself. It is too early to indicate possibilities—the scheme itself is still in its infancy—but the matter is one which will receive the earnest attention of the Board.

You will have read of the recent visit to this country of His Highness Taymour Tash, the Minister of Court. The opportunity was naturally taken to discuss certain affairs of the company with this eminent representative of His Majesty, and I would like to pay tribute to his profound grasp of those affairs and the general breadth of his outlook.

Let me also take this opportunity of saying how greatly we appreciate the benefit we continue to derive from the wise counsel of His Excellency Mirza Eissa Khan Fayz, the Persian Imperial Commissioner, who is happily in our midst to-day.

Problems of the Oil Industry.

Last year I ventured to indulge in some general comments on certain world aspects of the petroleum industry. I am glad to notice, on re-reading my remarks, that I trod gently on what was, and continues to be, very delicate ground. We still have with us the problem of uncontrolled production, just as we have that of reckless

marketing competition. I think, however, that the past year has led not only to a better realisation of these problems, but also to a gradual mobilisation of effort to overcome them. So far as production is concerned, it is hardly necessary to amplify my remarks of last year on the potentialities and actualities of our own production in Persia. There is a great gulf between them; but in the present state of world competition, low prices, and excess production, your Board hold strongly to the view that a temperate though steadily progressive policy is much to the ultimate advantage of all who look for continuous benefit from the activities of this company.

It profits nobody, in the long run, that there should be alternate waves of over-production and under-production, of high prices and low prices, of big profits and little or no profits. Least of all does it help the consumer—whether he be responsible for a motor cycle or for a transport system—to find his fuel bill, over a very brief term of years, looking like a fever chart.

There can now be no secret that certain representatives of which I may in all modesty describe as the leading forces of the petroleum industry of to-day have been closely considering this many-sided problem. It is with a very great sense of responsibility that this contact has been made. We naturally want to use such influence as we possess to make the industry a prosperous one—indeed, that is our first duty to the shareholders. Prosperity, however, does not mean a place in the sun only for a few world-wide operators. Every concern that can produce or operate competitively but efficiently must be able to share in it. Let me strongly emphasise the fact that in no sense is any creation of a trust aimed at.

Over-production is by no means governed by the rate at which oil can be brought to the surface in the world's oil fields. If it were so, there would be chaos. Fortunately, a check is immediately imposed by the physical limitations of pipe-lines, tanks, refineries, and transport, through which oil has to pass before it reaches the consumer. These facilities already exist throughout the world in such abundance as to ensure that an adequate supply of products at fair prices will be available to the consumer for very many years to come. So long as they are not unduly multiplied, there will always exist a check against oil flowing into the world's markets at a rate far exceeding the world's demands. It is evident, therefore, that the problem of what is called over-production has recognisable dimensions, and that it should not prove impracticable to devise means which will make for greater stability.

Hitherto, India as an outlet for our products has been virtually confined to fuel oil. May I just explain the exact significance of the recent change? Our friends the Burmah Oil Company now sell in India through a company called the Burmah-Shell Oil Storage and Distributing Company of India, the capital of which is jointly provided by the Burmah Company and the Asiatic Petroleum Company, a member of the Royal-Dutch-Shell Group. Without participating at all by way of capital, we have now arranged to consign to the new company through the "Burmah" a substantial share—and as the market grows an increasing amount—of the import trade of that enterprise; and this in respect not only of the heavier oils but of all products, including kerosene and motor spirit.

Similarly, we come to the announcement, made three weeks ago, of the agreement we have made with the "Asiatic" respecting distribution in Egypt, East and South Africa, and certain other markets. In this case the newly-registered Consolidated Petroleum Company will operate on our joint behalf.

This alignment of interests also is a permanent one. An important part of the scheme is a provision whereby, whilst both companies participate equally in marketing-profits, the oil will be supplied in such a manner as to afford recognition to the principal of drawing upon their nearest sources of production. The equipment established and the experience already gained by both partners in the countries concerned will constitute a common stock. It may be claimed, therefore, that in the new "Consolidated" the principles I have just been discussing are brought, in some measure, to fruition. Having regard to the evils resulting from over-provision of facilities, it detracts nothing from my satisfaction to be able to assure you that in this particular case the operation of amalgamation represents in large part one of prevention as well as of cure. The markets are already considerable in extent, and as years go on many of them will certainly become important. In relation to these markets, we and our partners command sources of supply abundantly stored and almost ideally placed. The Board is therefore satisfied that nothing but good can come of this significant union of interests.

In one movement we become established as distributors in a wide area, and on equal footing with a fully-established concern. We should have had to wait many years and expend much capital before we could have hoped to acquire such an influential position by methods of isolated and aggressive penetration. The "Consolidated" Company will be governed by the Anglo-Persian and the Asiatic

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

working in the closest concert, and our share of the capital and representation on the Board will be on a basis of absolute equality. Let me add in passing that the maintenance of the Anglo-Persian's complete independence is in no way impaired by any of the prospective developments which the Board have in mind.

Future Prospects.

In this country every oil product has fallen in price. On the other hand, most Continental countries have shown a rise in value towards parity with prices ruling in the United States, where, with the important exception of fuel-oil, petroleum products have shown considerable appreciation in value. The world's consumption, more particularly of motor spirit, continues steadily and persistently to advance. The influence upon the company's revenues of increased turnover and important economies is already becoming cumulative in effect; and, provided we are right in believing that prices have touched low-water mark, we are justified in hoping that the close of the current period will be marked by not unsatisfactory results, and that the succeeding year may inaugurate an era of steadily expanding profits.

The report and accounts were unanimously adopted.

NEWS FROM ALL SOURCES:

The Greek Government has decided to lower the duties on imported wheat, flour, and maize.

It is understood that a Czechoslovakian-Yugoslavian Agricultural Bank is to be established in Belgrade.

The capital of the Banca Timisoarei si Societate Commerciala has been increased from 50,000,000 lei to 62,500,000 lei.

The opium crop in Macedonia is stated to have been a record, the estimates of the total yield ranging from 150,000 to 180,000 kilograms.

Mr. Archibald A. Jamieson, partner in the firm of Messrs. H. S. Lefevre and Co., has joined the committee of the Ottoman Bank in London.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for October was 65,110 tons.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended October 10 amounted to £E11,655, making the total from April 1 £E144,995.

The traffic receipts of the South Indian Railway Company for the week ended September 30 amounted to Rs.15,15,911, making the total from April 1 Rs.3,07,98,376.

It is reported that the 1928 crop of locust beans in Cyprus will amount to about 38,000 tons. The exports in August totalled 55 tons, while 2,459 tons were exported in September.

The Yugoslav Ministry of Commerce has issued a regulation making it requisite for a foreigner to obtain the sanction of the Ministry before becoming a partner in a business concern in Yugoslavia.

It is understood in Cairo that the United States has intimated its wish to be represented on the International Quarantine Board, and that the Egyptian Government is prepared to agree to this.

Coupons due November 15 on the Persian Five per Cent. Sterling Loan of 1911 will be paid at the Imperial Bank of Persia, 33-36, King William Street, E.C.4, or by Messrs. Glyn, Mills and Co., 67, Lombard Street, E.C.4.

The Egyptian Sculpture Galleries of the British Museum are under redecoration and will be closed to the public in sections, the first section to be closed being the northern half, i.e., between the Central Saloon and the north-western staircase.

A hundred and ten Persian students have left Teheran for Paris. They will study different sciences in Europe under a scheme contained in an Act passed by the Majliss in May, by which at least 100 students will be sent to Europe every years for six years.

According to a message from Constantinople, provision is made for forming a Turkish "School of the Nation," in which the scholars are to be the whole of the population above the military service age. Their masters are to be 12,000 specially-recruited teachers. By these means popular classes are to be organised throughout Turkey and all men and women over 46 years must go to school.

The East India Manganese Company has been registered as a public company, with a nominal capital of £140,000, in £1 shares, to acquire certain manganese fields in the village of Basadera, Singbhum district, Bihar and Orissa, India; to adopt an agreement with the Dorgbun Trust and D. P. Barnett; and to carry on the business of miners and quarriers of ores. The directors are D. P. Barnett and Sir Alfred H. Grant (director of St. James Court Estate).

COMPANY NOTES AND REPORTS.

SUDAN PLANTATIONS.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30 last states that during the past year considerable expenditure of capital has been incurred on the new areas in course of development, and further expenditure of the same nature is required. The financial position is satisfactory, and liquid resources should be adequate to meet all further demands in connexion with development and the running of the concession of 465,000 feddans. The area under cotton in the Gezira during the year was 105,387 feddans, as compared with 100,058 feddans during the season 1926-27.

Parana Plantations, Ltd., has issued 560,000 new ordinary shares at par, in order to provide the lands in which it is interested with improved communications by an extension of the Sao Paulo-Parana Railway. The Syndicate took up its proportion of shares in the new issue, and its total holding appears in the balance-sheet. Brazil Plantations Syndicate, Ltd., has decided to abandon the direct cultivation of cotton and other crops and to realise its properties as and when favourable opportunities occur. It is anticipated that satisfactory results will be obtained from the eventual disposal of these properties. The Syndicate's holding of shares in this company remains unaltered.

The yield of the Gezira cotton crop did not come up to that of the preceding season; the exceptionally hot winter and the abnormal absence of winds prevented the proper aeration of the plants and rendered the cotton susceptible to various pests. Nevertheless the final results were not unsatisfactory. The crop at Zeidab, which is further north, did not suffer in this respect and gave results above those of the previous season, as will be seen from the subjoined table showing the cotton crops dealt with, and also the corresponding quantities of the preceding year:—

	1927. Bales.	1928. Bales.
Zeidab	3,109	3,330
Gezira	113,169	77,065
	116,278	80,995

The whole of the Zeidab bales and 47,428 Gezira bales, as well as all the cotton seed shipped from Zeidab and the Gezira, together 35,255 tons, were sold at satisfactory prices prior to the close of the financial year. The portion of the Gezira cotton crop which remained unsold at June 30 last is entered in the balance-sheet at a valuation which the directors consider conservative.

The Syndicate, under the terms of the new arrangements with the Sudan Government, has now become liable for the payment of Sudan Business Profits Tax, but as relief equivalent thereto will be obtained by a reduction of the rate of British income tax to be paid, this does not entail any increase in the amount of taxation on the Syndicate's profits. British income tax at such reduced rates has, however, to be deducted from dividends instead of the standard rate as in the past, and in order that there shall be no material difference by reason thereof in the rate of dividends paid by the company, the Board recommend that on the declaration of the final dividend for the year at the forthcoming general meeting, provision be made for the deduction of Sudan Business Profits Tax and the reduced rate of British income tax, and that the interim dividend be adjusted to accord with the same deductions. The total deductions thus made for both taxes would not exceed a deduction of British income tax at the standard rate. It is proposed to make future declarations of interim and final dividends on the same principle. The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £587,401 5s. 5d., which, added to the balance brought forward from last year, viz., £419,041 10s. 11d., less payment made on account of directors' percentage, £31,825-£387,216 10s. 11d., brings the total credit to £974,617 16s. 4d. The directors now recommend the declaration of a final dividend payable to shareholders on the register on November 3, 1928, at such a rate as, with the interim dividend paid in July last, will be equivalent to a dividend for the year of 5s. per share (equal to 25 per cent.), less Sudan Business Profits Tax at the rate of 4½d. in the £, and British income tax at the rate of 3s. 7½d. in the £. This final dividend, together with the interim dividend paid in July last, will absorb the sum of £362,500, leaving a balance to be carried forward of £412,117 16s. 4d.—£974,617 16s. 4d.

An agreement has been reached upon the status of Egyptians in Persia and of Persians in Egypt, and a Treaty between the two countries is to be signed at an early date which will supersede the Turco-Persian Treaty of 1875, under which Persians have hitherto enjoyed certain privileges in Egypt.

The report of the Egyptian Consolidated Lands for the year to June 30, 1928, states that in July, 1927, the scheme for repayment of 50 per cent. of the capital was confirmed by the High Court. Accordingly a return of 10 per cent. in cash and 40 per cent. in non-interest-bearing debenture stock has been made, and the present issued capital stands at £175,000 in 1,400,000 shares of 2s. 6d. each. At Kom-el-Akhdar estate sales were made totalling approximately 152 feddans, at an average net price of £E65.22 per feddan. Including about 24 feddans which reverted to the company by foreclosure, the area remaining unsold at June 30, 1928, was 1,310 feddans. At Rodah Island a property of 5,527 square metres was sold at a net average price of approximately £E1,337 per square metre. The area unsold at the close of the year was 26,639 square metres, exclusive of roads.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 31:—

Egyptian Futures.

Sakel Contract.—We have experienced rather a quiet week in this market, and apart from the relative steadiness of values in the face of very lukewarm trade support the week has been somewhat devoid of feature. During the earlier sessions a moderate amount of scattered speculative buying, aided by an advancing tendency in the American department, caused prices to harden somewhat; more recently pre-November liquidation orders have been in evidence, and this, coupled with a reactionary movement in the other market, has forced prices below last week's level, near positions showing declines of 14 to 36 points and more distant options 6 to 15 points since our last. During the past few days there has been marked evidence that the market is becoming more susceptible to the increasing crop movement and to the prevailing trade attitude towards Sakel cotton at its ruling basis over other growths; the result of this is that the American/Egyptian straddle difference has closed in about 25 points on the week. In our opinion, fine cottons will have to cheapen still further before they regain their former popularity; in the meantime consumers are getting accustomed to using other varieties and through careful working and experimenting are getting better results from those so-called substitutes than ever before. The local stock-taking figures show only 13,000 bales in stock at this side; the bulk of this cotton is of undesirable quality, and as the new crop appears to be superior in every respect there has been no inducement for spot houses to support the near position. To-day Novembers have been traded in at 40 points under January, a very full carrying premium; as most of the liquidation is now completed, probably differences will close up somewhat after the first tender day. Alexandria has shown more resistance to the decline than our market, with the result that we have again dropped to a discount; offers from the other side are quite impossible from an import point of view, and consequently little free cotton is heading for this side. Reports of the growing Sudan crop are satisfactory, planting which was much interfered with by heavy rains in certain districts last season being completed under favourable conditions and a normal start effected. The general outlook continues to be rather "bearish," and, unless distinct improvement in the trade offtake is experienced during the next few weeks, increasing pressure from the crop movement may depress values further; those operating on the short side must bear in mind, however, that they are dealing with a comparatively small crop and a contract particularly susceptible to manipulation.

Upper Contract.—The tone in this contract has inclined to the heavy side during recent sessions, as apart from the American market developing a reactionary tendency, there has been a partial withdrawal of trade support. In addition, straddle purchases against sales of American have been on a much reduced scale and confidence in this operation has been somewhat shaken by reports of plentiful supplies of American staples offering at practically the cheapest basis of the last five years. Exporters have been so well supplied with shipment orders that arrivals have been well taken to date, but it remains to be seen whether the demand during the coming weeks will be consistent enough to hold values.

Egyptian Spot.

We have again to report a somewhat disappointing week in this department, and prices, after a series of moderate fluctuations, have eased on balance from $\frac{3}{4}$ d. to $\frac{1}{4}$ d. per lb. Reports from up-country have been of a distinctly more hopeful character, and it is all the more puzzling, therefore, that spinners have not displayed more enthusiasm. Most of the business passing has been of a hand-to-mouth character, and offers of cotton for forward delivery have been difficult to place. The only bright spot has been a tendency on the part of buyers to pick up some cotton on any drop in values, which rather bears out the prevalent opinion that there is business waiting to be put through—at a price.

Sakels have been in improved demand in the qualities covered by "pass to 200 on," but otherwise there has been little change. The good to fine cotton has again failed to attract attention. Uppers have not been quite so much in the limelight as usual, except the "pass to 25 off" quality, for which quite a brisk inquiry has been kept up. Possibly there has been slightly more interest shown in the best qualities, but the improvement is very slight. The bulk of the inquiry has been for low Sakel cotton at from 10d. to 12 $\frac{1}{2}$ d.

Pilion has been in moderate demand only, and "specialities," such as Nahda, Maarad, White, etc., have suffered from neglect. Sudan Sakel has met with a very limited offtake, but the basis has been maintained. Forwardings to spinners for the week ending the 26th inst. were returned as 11,661 bales Egyptian and 596 bales Sudan. Estimated spot sales for the week, 1,900 bales Egyptian and 250 bales Sudan. Quotations of Sakel show a decline of 35 to 50 points, those of Upper 35 points, and those of Pilion 20 points on the week. F.G.F. Sakel to-day, 17.75d. F.G.F. Upper to-day, 12.15d. F.G.F. Pilion to-day, 13.05d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 25, state:—

The market has during the week maintained the activity mentioned in our last report; the tone, however, has been somewhat easier. The week's summary of price movements is as follows:—Sakellaridis. November, 35.30 dollars, 0.17 dollars down; January, 35.85 dollars, 0.19 dollars down; March, 36.37 dollars, 0.20 dollars down; May, 36.77 dollars. Ashmouni: December, 22.64 dollars, 0.58 dollars down; February, 23.12 dollars, 0.53 dollars down; April, 23.46 dollars, 0.52 dollars down; October, 1929, 24.35 dollars, 0.33 dollars down.

Sakel.—No new features of any importance have developed during the week. The slight decline in values which has occurred is the result of heavy hedging operations for account of growers and up-country merchants, which, owing to the cautious attitude of spinners regarding fresh commitments, the market was not in a position to absorb freely. There is no doubt that spinners do not care to pay current prices for Sakellaridis, and are only entering the market for this growth when necessity compels them to do so.

Reports from up-country on the final outturn of the Sakel crop continue to be conflicting. Basing ourselves as the data available, however, we estimate that the production will reach 2 $\frac{1}{2}$ to 2 $\frac{3}{4}$ million kantars. There is certainly nothing abundant about this figure, but if we are to give credit to reports emanating from textile centres producing fine goods, it ought to be sufficient for requirements, inasmuch as there is available in addition the Sakel carry-over at the end of August of about 675,000 kantars (including 325,000 kantars held by the Government) and the supply of Sudan Sakel, estimated this year at 570,000 kantars against 470,000 kantars last year. The approximate figure of the total available supply of all Sakel cotton, Egyptian and Sudan, for this year is therefore about 3,620,000 kantars against about 3,935,000 kantars last year. The development of the seasonable demand from the trade or its absence will, in our opinion, be the primary factor controlling the course of Sakel prices during the coming few weeks.

The Sakel/Ashmouni straddle (November/December) stands at 1,266 points against 1,225 points last week and 838 points at this time last year.

Crop, 1928.—In the Northern districts only is there any cotton remaining unpicked, and the quantity is negligible. In Upper Egypt, yields per feddan have this year shown some record figures, the production in some cases having reached 10 kantars per feddan; the substantial increase in the production this year in Upper Egypt is therefore now quite understandable.

At a meeting of the Administrative Council of the Empire Cotton Growing Corporation, held in Manchester recently, the Director mentioned the progress that had been made in cotton-growing under rainfall conditions in the Southern Sudan. Notwithstanding the difficulties of transport, and others which were unavoidably associated with attempts to turn backward and primitive races into agriculturists, the scheme was making fair progress, and in the season 1927-28 the rain-grown cotton area had produced over six million lb. of seed cotton.

Notes of the Week.

The New Order in Roumania.

The solution found for the Roumanian Ministerial crisis is, undoubtedly, the right one. Pre-War Roumania was accustomed to a two-party system, under which Liberals and Conservatives alternately held office. The interposition of a transition Government could only have been regarded as an attempt to hold the influence of the Liberal Party in reserve for emergencies. To-day the country has manifestly reverted of its own accord to the two-party system; but the divisions in the enlarged Kingdom are different. Universal suffrage and the sense of independence which agrarian reform has fostered among the peasantry have made the latter conscious of their political power. The union of the new provinces was the outcome of a definitely democratic, as well as national, movement, and these new Roumanians are as anxious as the peasants to impress their personality on the unified State. For ten years they have virtually been kept at arm's length—a state of affairs for which they are not wholly without blame, for they lacked organization and were content to remain, together with other political groups, as isolated units in the face of the serried and disciplined ranks that the Liberal Party could oppose to them. This long period of opposition, however, has not been without its advantages. The National Party of Transylvania and the Peasant Party, with its supporters in the other provinces and in the Old Kingdom, have made common cause, and together they have evolved a programme for which they claim that it offers a policy more in accordance with the modern needs of the State. Both the composition of the National-Peasant Group and its tactics have given rise to the fear that it may stand for more radical reforms than the Roumanian people really desire or than are suited to the conditions of the country. Last March the Group took the decisive step of withdrawing from Parliament, repudiating all responsibility for, or approval of, any act of the Government, and went so far as to hold its own "parliament" in Bucharest. The fulminations against the Government appeared to have no effect upon M. Bratianu or the Council of Regency, the monster meet-

ings at Alba Julia and elsewhere seemed to misfire; but the "parliament" at Bucharest on July 26 revealed a party with a carefully drafted comprehensive programme, and the Liberal Cabinet must have recognized at last that it was confronted with a more formidable Opposition than it cared to acknowledge. The event has proved that, with allowance made for the intervening holiday period, the Government did not long survive the Rump Parliament. Whether as a result of their tactics or because the economic conditions of the country played into their hands, the Transylvanians have come into their own.

The National-Peasant Programme.

The outlines of the policy to which the National-Peasant Government under Dr. Maniu is committed can be gathered from a publication, issued by the Party, which embodies the reports and resolutions approved by its "parliament." As Roumania, although rich in all kinds of natural resources, it is stated, lacks capital and often the necessary capacity for their exploitation, the Party has decided to open the door to foreign capital and to foreign technical assistance, offering conditions, legal and administrative, on perfect equality with those enjoyed by Roumanian capital. To bring about this collaboration of foreign and Roumanian capital, the currency will have to be stabilised, and such legislation as militates against free competition and the normal development of the country will have to be abrogated or modified. Budgets are to show a real equilibrium; taxation is to be simplified, and the civil service, while being reduced in numbers, is to be better paid and more efficient. Unless the need for a loan is found to be too urgent to admit of delay, the Party would be prepared to seek one under the auspices of the League of Nations, hoping, no doubt, to secure better terms than those that have been imposed upon the Bratianu Government. In regard to ethnical and religious minorities, the pledge is given that the Peace Treaties will be strictly respected, as well as the Constitution and the resolution passed in 1918 at Alba Julia, which guaranteed to these minorities treatment of perfect

equality with citizens of Roumanian origin. A striking passage in a report on the Loan policy inveighs against the economic legislation of the Liberal Party, which inflicted on the country incalculable harm under the pretext of developing it by its own means. "This economic chauvinism," continues the report, "revealed itself in the Mining Laws, which raised the whole foreign oil industry in revolt against us; in the Commercialisation Law, also directed against foreigners, which caused the State to lose considerable sums; in the Power Law, which for four years has retarded the progress of the country; and in the Direct Taxation Law openly directed against foreign capital." For the new Parliament, which is to assemble on December 22, there is likely to be a formidable programme, if the elections of December 12, if as seems certain, confirm Dr. Maniu's Government in power.

The Position in Yugoslavia.

The Yugoslav Prime Minister has announced the Cabinet's decision to prosecute the two leaders of the Peasant-Democrat Coalition for speeches made during the last few months; but it is to be hoped that wiser counsels will prevail before it is too late. It is difficult to see what good purpose would be served by such a prosecution. The trial would become a political duel, at which much worse things would be said than those with which the defendants could be charged, and if the Yugoslav judiciary has so much time on its hands to waste, it would surely be better employed in bringing to justice the perpetrator of the Skupshchina murders of June 20. Apart from this threat by Father Koroshetz, there would seem to be an underlying truth in the diagnosis of a cartoon in a Yugoslav newspaper, which represents M. Pribitchevitch, joint leader of the Peasant-Democratic Coalition, as saying, in reply to an inquiry regarding the political situation: "The political situation is improving. In Roumania they have already been obliged to call Maniu into the Government." The Croats and their allies, the Dissident Democrats, have seen a strong analogy to their own circumstances in the struggle that Transylvanians have been carrying on against the Liberal domination in Roumania. Like the National-Peasant Party, they also have withdrawn from Parliament, and their recent meeting at Sisak was generally described as the Yugoslav Alba Julia. They can hardly fail to be heartened, therefore, by the fall of the Roumanian Jericho, and to regard it as a favourable omen. In the meantime indications of a national weariness of the Serb-Croat deadlock are multiplying, not without their effect, it would seem, on the Government itself, as the Radical section is inclined to look askance at what is regarded as the over-emphasis now being laid by the Democrats under Dr. Davidovitch and M. Marinkovitch on the value of a Serb-Croat understanding. A newspaper attack on the Croats by the head of a Government Department has been resented in Serbia and in deference to public opinion the writer has been called upon to explain his action. The situation would be more hopeful, if some Croat spokesmen could restrain their irresponsible utterances which seem to lend colour to the charge that Croatia entertains separatist designs.

Britain and Archæology.

Lord Crawford and Balcarres did well at the Annual Meeting of the British School at Athens, to couch a lance on behalf of British archæology. During the forty years of its existence this School has many notable achievements to its credit, and has well upheld the best traditions of British archæological research. What a prominent part Great Britain is now playing in the field of archæology is indicated by the number of the more striking "finds" of recent years that are associated with British effort. At Ur of the Chaldees, in Egypt—both the Valley of the Kings and Sakkara—at Knossos in Crete, Gaza and Jerusalem the discoveries have all been effected by British archæologists. If there is one matter for regret

in this connexion it is that comparatively so little of the financial support behind these excavations should come from British sources, and we must be content with such satisfaction as can be derived from the fact that American capital is so often content to leave the work in British hands. It is to be hoped that some of the recent spectacular discoveries will rouse in time the interest of British capitalists to make them realise that archæology is by no means an unimportant factor in promoting the influence and prestige of the British race in the East.

Economic Progress of Iraq.

During the examination last week by the Permanent Mandates Commission of the annual report on Iraq of the British Government, Mr. B. H. Bourdillon, Counsellor to the High Commissioner, was able to supply figures which were in themselves a striking indication of the economic progress which the young Arab Kingdom has made in the last few years. At first concentration had to be made upon political problems, but with the passage of time endeavours could be made in other fields also, and although it would be absurd to say that the political question in Iraq is no longer a live issue, it can truthfully be said that the transference of much energy from the political to the administrative and economic sphere has had most gratifying results. During the past five years, for instance (which is, roughly speaking, the period of Sir Henry Dobbs' High Commissionership), the revenue has increased by 12 per cent. (64 lakhs, or £480,000), and when with this fact is coupled the fact that in Turkish times (1909-10-11) Iraq yielded 38 per cent. less than the present receipts, it will be seen that efficiency in tax-collecting is perfectly possible provided taxpayers know for what purpose they are paying. Expenditure had been increased by 25 per cent., but despite this there has been in the last five years a total Budget surplus of 28½ lakhs (£2,137,000). The British representative was able to point out that irrigation in Iraq is being extended, that cotton growing is on the increase, and that, because of her certain future developments in matters of agriculture and of oil, Iraq would not have to fear the construction of a trans-Persian rail-line, as she would then be independent of the Persian transit trade. Altogether it appears to have been a highly optimistic report which was offered to the Permanent Mandates Commission.

The Syrian-Turkish Frontier.

If the Press in Turkey be any guide to the state of official or public opinion in Anatolia, it will not take very much to turn the dispute over the Syrian-Turkish frontier into a serious quarrel. The origin, and the rights and wrongs of this particular dispute have already been set out in THE NEAR EAST AND INDIA, and there is no need to recapitulate them now. It is sufficient, therefore, to indicate that Turkey, having agreed to submit to the award of the international commission under General Ernst, failed to do so. No surprise can be felt, then, if in these unfortunate circumstances the opportunity has been taken by the "komitajis" of Turkey and of North-East Syria to attempt to work off old scores; certainly no dispassionate observer is likely to credit either side with an absolutely clean slate. The Turks claim, of course, that the trouble originated in Syria, and even accuse the French Mandatory authorities of encouraging brigandage. The Syrians, on the other hand, while admitting that Syrian gendarmes and even French troops are compelled occasionally to cross the border in the pursuit of Turkish bands, declare that the great majority of the raids derive from Turkish territory. Now if this ancient pastime is to be stopped, it should be stopped quickly, and conceivably the wild charges of the Turkish Press may have the unexpected effect of securing an agreement. For it is announced that the new French Ambassador to Turkey, Comte de Chambrun, is earnestly

trying to achieve reconciliation with Tewfik Rushdi Bey, Foreign Minister at Angora; and the Ghazi, in his speech at the opening of the Angora Assembly, referred, it will be remembered, to the need of clearing up the outstanding problems with France—even hinting that immaterial sacrifices might have to be made by Turkey. If Turkey consents at last to recognise the frontier which has been drawn up under international auspices, she will not only have recovered her self-respect, but will also have gone some way to establishing with Syria such happy relations as she now enjoys with Iraq. To anyone who knows the region in dispute, it is obvious that the district of the Upper Jazirah known as “Le Bec du Canard” ought, as the Dutch General pointed out, by reason of its geographical position and the racial characteristics of its population, to be included in Syria.

INDIAN NOTES.

The Bishop of Bombay.

The impending resignation by Dr. Palmer of the Bishopric of Bombay will mark the termination of an incumbency of very considerable achievement. It is true that the retiring Bishop never attained great heights of personal popularity; but it is difficult for an Indian Bishop, in his position of only partially recognised dignity, to attain such popularity, unless he has a long record of missionary effort behind him. Bishop Palmer, following as he did, a succession of somewhat transient and uneasy phantoms, has maintained, and, indeed, increased, the importance of the post which he has held for the long period of twenty years. For a great portion of that time he has been recognised as the brain of the Indian Bench of Bishops, although he has never been regarded as Metropolitan, that somewhat ill-defined dignity being apparently connected indissolubly, it may be presumed on historical grounds, with the Bishopric of Calcutta. As the moving spirit, however, of the Indian Bench, he is justly regarded as the engineer and organizer of the Indian Church Measure. To some it may appear a doubtful honour; it is probable enough that the Measure will bring not peace but a sword to the Indian Christian community. It will destroy the old connexion with the Church of England, and may well lead to the separation of the European and Anglo-Indian community into a Church distinct in government and even in doctrine from the Indian Church. Moreover the Measure has deliberately been framed to permit, not merely the independence of the Indian Anglican Church, but its re-union with the other Protestant Christian communities. This is greatly to Bishop Palmer's credit, since his attitude, at the beginning of his tenure of office, was severely Anglican to the point of lack of sympathy with other Christian denominations. But the broad basis of reunion, however desirable, may lead to some strange developments of doctrine. A particular danger lies in the fact that the mass of the Indian Church has been drawn from outcaste or aboriginal sources, with little experience of administration behind it. The Roman Catholic Church, with an even larger number of adherents drawn from similar classes, has never allowed any such degree of liberty and self-determination as the Indian Church Measure permits. A further danger lies in the fact that the leaders of the Indian Church may be tempted, from the very weakness of their numbers, to shout with the most extreme and anti-European crowd. A similar tendency has been observable among the converts of the Churches in China and Japan. Yet, when all dangers are admitted, it cannot be doubted that the course chosen by Bishop Palmer and his supporters has been the best because the most courageous. The Indigenous Church in India could have no healthy life as an artificially fostered plant, even if the changing conditions in India allowed such fostering to continue. Depending on its own growth, the plant may always be delicate and even puny:

but by such independence alone can it hope for any existence of permanent usefulness. In the story of its foundation, Bishop Palmer's name must have an honourable place.

The Bombay Mill Inquiry.

The strong, but not unjustifiably so, terms in which Sir Victor Sassoon recently referred to the part played by Communist agitators in the Bombay Cotton textile dispute are unhappily proving only too correct a description of their nefarious activities. At a meeting held immediately after last month's settlement the so-called leaders of the operatives made their attitude quite plain. Describing the agreement as not a settlement but merely a suspension of active hostilities, a kind of truce pending the report of the proposed Committee of Inquiry, the findings of which they were prepared to reject before they were even formulated, the labour leaders showed no appreciation whatsoever of the gravity of a dispute which has cost their misguided followers over three crores of rupees in wages alone. Instead, successive speakers advised their audience to spend the intervening period in building up a strong organisation and preparing for an “offensive strike”—not a “defensive strike” like the present one—in case a cut in wages were introduced later. The result is to be seen in the series of sporadic outbreaks of hooliganism and “direct action” tactics which have marked the progress of the inquiry. The Committee which has been entrusted with that thankless task and entered upon its duties at the end of last month, is all that could be desired as regards its personnel, and we have little doubt as to the form its findings will take. Sir Charles Fawcett, the Chairman, is a very capable member of the Indian Court Service and one of the most conscientious and experienced judges on the High Court Bench. He can be relied upon to take an impartial, sensible and sound view of the questions at issue and his verdict will carry great weight with the public. Mr. Kharegat, a retired member of the Civil Service, is also a good selection, while the third member, Mr. B. S. Kamat, is a well-known figure in the public life of the Western Presidency, with considerable experience of other committees and commissions. That the inquiry will be conducted with the greatest expedition consistent with the proper sifting of the facts we are quite sure. Unfortunately, although the points in dispute have been appreciably narrowed down in the course of the negotiations which gave rise to the Committee's appoint-

THE NEW ROUMANIAN GOVERNMENT.

The Ministerial crisis in Roumania caused by the resignation of the Government of M. Vintila Bratianu, has been ended by the appointment of Dr. Maniu, the Transylvanian leader, as Prime Minister. In view of the economic situation and the urgent need for a foreign loan the Council of Regency would apparently have preferred a Coalition Government for the purpose of an immediate conclusion of the loan negotiations, to be followed by a general election. M. Titulescu's efforts to persuade either M. Bratianu or Dr. Maniu or both to assist him in the formation of a Coalition Cabinet were not successful, and the Regents thereupon called upon the leader of the National-Peasant Party to form a Government. Although the need for a loan is pressing, there can be little doubt that the real interests of Roumania will be served better by the transfer of political power to the hands of the Party which appears to command the support of the country than by a mere transition Cabinet. The situation in Roumania is too critical for any tentative handling or makeshift devices. Apart from actual conditions in the country, where the results of a serious failure of the maize crop are aggravated by a general financial stringency and the high cost of living, the credit of the country abroad is at such a low ebb that M. Bratianu's Government would have had to be content with a foreign loan at seven-and-a-half per cent. interest, issued at 88. It remains to be seen whether the new Cabinet can obtain better terms. The situation in the country, however, cannot be remedied by the wave of a wand. For all practical purposes the Liberals have been in power for ten years, and their financial policy, for which M. Vintila Bratianu is understood to have been solely responsible, has been carried out with a thoroughness that will militate against any sudden transformation. An elaborate economic fabric has been erected during this last decade, and the Roumanian people are living their lives in it or under it. To demolish it over-hastily might involve the whole people in the ruins.

M. Bratianu's financial policy aimed at converting Roumania from a State relying almost entirely on agriculture for its national wealth—the export of wheat represented eighty per cent. of the pre-War exports of the Old Kingdom—into an industrial country. To this end the Liberal Government set itself to develop as rapidly as possible all manner of industries, many of them, in the opinion of its political opponents, lacking a natural basis for development within the country. To bolster up these industries in their early stages, they were accorded the protection of tariffs, which immediately had the effect of

increasing the cost of living. It then became necessary to keep down the price of bread and meat, and export duties were imposed on agricultural products and exported cattle. Roumanian agriculture, however, was still handicapped by the effects of agrarian reform, which, however much in the interests of the peasants and of the country as a whole, had resulted in a marked diminution of agricultural production, consequent upon the breaking up of big estates. The situation was further complicated by the disorganization of the railways, and general lack of transport, and by the absence of agricultural credit. Having set its face against the introduction of foreign capital, the Liberal Government encouraged the multiplication of banks which were largely dependent for funds on the National Bank and in turn supported the newly formed industries. As both banks and industries were mainly in the hands of its own supporters, the Liberal Government exposed itself to the charge of framing the fiscal policy of the country to its own advantage, and, when it proceeded to strain every effort to bring about the revalorization of the leu which would have enhanced the value of the depreciated currency, the policy was believed to be dictated by its own personal interests. Thus political antagonism, which in any State of South-Eastern Europe is capable of becoming embittered without the intervention of any direct cause, was fanned to great heat by the conviction acquired by the opponents of the Liberal Party that the resources of the State were being used for the Party's aggrandisement. Unfortunately the general administration of the country did nothing to conduce to a better feeling between political parties. The Constitution, drawn up and passed by the Liberals, favoured a highly centralised administration, which meant that Liberals from the Old Kingdom, conspicuous neither for efficiency nor for tact, were sent to administer the new provinces, and political prejudice was aggravated by personal grievances. The climax came when the Liberals, whose conduct of elections was not noted for any special consideration shown to their opponents, passed an electoral law which gave a party securing forty per cent. of the seats an absolute majority in the Chamber. By means of this law the Liberal Party had only to find a subservient nominee, such as they had in General Averescu and his People's Party, willing to act as an alternate Government, to insure that they should retain indefinitely in their own hands the reins of power.

This explanation of the Roumanian situation as it appears to the political opponents of the Liberal Party is necessary to enable the bitterness which has actuated the National-Peasants in their attitude towards the Government of M. Bratianu to be better understood. Dr. Maniu's Party holds that the conditions in Roumania cannot be permanently remedied by mere tinkering. Its programme aims, in the first place, at the rehabilitation of Roumania's reputation abroad in so far as it has been affected by the appearance of discrimination against foreigners; the policy of favouring industry to the extent of penalising agriculture will not be followed, and a more hospitable attitude is promised towards foreign collaboration in the reconstruction of Roumania. The task that Dr. Maniu has set himself is not an easy one; his Government will have to readjust the over-centralisation of the last ten years by gradual methods, and should be careful not to hold out hopes of the immediate establishment of the millenium in a sorely-tried country.

Cairo, November 3.

King Fuad in Sinai.

Following on his recent very successful progress to the Oasis of Siwa and the Western Desert King Fuad proposes to pay a visit to the Sinai Peninsula. This will be the first time that he will have inspected his territory east of the Canal and the Gulf of Suez, for although the King made a voyage down the Red Sea last year, he only called at Tor, and did not penetrate into the interior of this eastern portion of his realm. Among the places that he will visit will be the celebrated Monastery of St. Catherine, picturesquely situated at the foot of Gebel Musa, on the summit of which local tradition has it Moses received the Ten Commandments. While the roads to the north of the Tih, the sandstone barrier which runs across from just south of Suez to Aqaba and cuts the Peninsula into half, are fairly good, to the south they are to all

EGYPTIAN GOVERNMENT.

EGYPTIAN UNIVERSITY.

APPLICATIONS are invited for the POST of PROFESSOR of FINANCIAL LAW in the FACULTY of LAW.

The appointment will be on contract for three years. The contract may be renewed at the end of that period if agreeable to both parties. One month's salary will be paid on arrival in Egypt for travelling expenses.

The salary offered is from £E1,000 to £E1,140 (approximately £1,025 to £1,168) a year, according to qualifications.

Applications, with copies of testimonials, should be addressed to the Dean of the Faculty of Law, Egyptian University, Cairo, and should reach him not later than November 30th, 1928.

EGYPTIAN UNIVERSITY.

FACULTY OF MEDICINE, DENTAL SCHOOL.

APPLICATIONS are invited for the POST of PROFESSOR of DENTAL SURGERY and PATHOLOGY and SUPER-INTENDENT of STUDIES in the DENTAL SCHOOL, CAIRO.

Applicants must possess an English Dental qualification, and have had experience in teaching and administration in a Dental School.

The appointment will be on contract for five years at a commencing salary of £E1,200, rising to £E1,360 by biennial increments of £E80. A month's pay will be granted in lieu of passage money.

Private practice will not be allowed.

There are 100 students in the Dental School.

The successful applicant will be required to take up his duties on February 1st, 1929. Applications, with details of qualifications, experience, and testimonials, should be sent to the Dean of the Faculty of Medicine, Egyptian University, Cairo, so as to reach him not later than November 28th, 1928.

EGYPTIAN UNIVERSITY.

APPLICATIONS are invited for the POST of LECTURER in APPLIED MATHEMATICS in the Faculty of Science.

The Appointment will be, in the first instance, on contract for three years, and subject to cancellation on three months' notice being given on either side. One month's salary will be paid on arrival in Egypt in lieu of passage money.

The salary offered is from £E700 to £E800 per annum according to qualifications.

Applications, with details of experience and copies of testimonials, should be sent to the Dean of the Faculty of Science, Egyptian University, Cairo, so as to reach him not later than 1st December, 1928.

intent and purposes non-existent, and the result of the King's project will be, as with every other outlying point which he has visited, that the internal means of communication will be greatly improved, and so facilitate the tourist traffic which so far has almost entirely neglected this most interesting region, owing to the difficulties of access to the interior.

Al Azhar.

As was foreshadowed at the time of his appointment as Rector of Al Azhar, Shaikh Mustapha Al Maraghi has not been long in the saddle before getting a move made in the direction of reforms in that great institution. Not only has a committee under his presidency reported on the reforms which should be introduced, but the Government has also approved of these proposals, and has appointed a committee under the presidency of the Rector to advise on the means of putting them into execution. Briefly stated, the proposals aim at removing the competition which the Ulama suffer, in the matter of Government posts, from the graduates of the "Dar al Ulum," the training college for Arabic teachers, and the school for Cadis.

This should in time have two excellent results. In the first place, the teachers in Arabic and theology required in the Government institutions will all be taken from the Ulama, who will follow in Al Azhar itself the full courses necessary to qualify them for these posts. In addition the introduction of proper courses of instruction, primary and secondary, will generally raise the standard of education of the preachers and their kind who go out into the world of the mosques.

The Mixed Courts.

On November 1, an important innovation started in the Mixed Courts. Henceforward monthly alphabetical lists will be drawn up and be at the disposal of the public on payment, giving a note of all the bills that have been protested during the preceding month. In addition the "Journal des Tribunaux Mixtes" is starting, under the authority of the Mixed Court of Appeal, a monthly supplement which will reproduce these lists adding other details of interest to the commercial community. This new departure, which is due to the initiative of the "Association du Commerce d'Importation," aims at bringing about a reduction in the enormous number of bills protested every year.

Hitherto all protests, although posted at the Mixed Courts, have been posted in a manner that hides them from the public eye. Little or no publicity has attached to the protesting of a bill, and in many instances merchants quite capable of meeting their engagements have allowed bills accepted by them to go to protest as a matter of course, confident that in view of the difficulty of ascertaining the commercial morality of local traders, they would always be able to obtain acceptance of their orders or credit from the importers. The publicity, which will henceforward be given to protests should materially improve the situation in this respect.

Shakespeare in Egypt.

On October 31, Mr. Robert Atkins inaugurated at the Royal Opera House a season of Shakespearean and modern plays. Last winter, it may be remembered, an experimental season of a fortnight was given by him with a Government guarantee against loss. Not only was there no need to draw on the credit, but the demand proved so great also, that it was decided to repeat the

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

experiment on a larger scale, and the season now inaugurated is the result. Mr. Robert Atkins has collected an excellent troupe, including Miss Stella Arbenina, Mr. Duncan Yarrow, Mr. Bruno Barnabe and Mr. Arthur Burne. The repertoire includes "King Lear," "As you like it," "Julius Cæsar" (beloved of Egyptian students), "Hamlet," "Anthony and Cleopatra" and "King Henry IV," with the "School for Scandal," "A trip to Scarborough" and "Pygmalion." Truly a banquet for those of us who are stranded so many miles away from the centre of Shakespearean and other British drama. The inaugural night was an enormous success, and a packed house, which included Mohamed Mahmud Pasha, the Prime Minister, and a large number of Egyptians, gave Mr. Atkins and his troupe an enthusiastic reception, which already foreshadows the success of this venture.

ABYSSINIA.

Addis Ababa, October 29.

The Coronation.

During this month business has been at a standstill. It will be remembered that early in September, following on a plot against him, H.H. Taffari Makonnen obtained full powers to govern the country. It was then decided to invest him with the title of King, and preparations for the coronation were at once put in hand.

After one or two alterations of date, October 7 was finally selected. The time was short and much in the way of preparation had to be done. Practically every engineer, carpenter, mason and workman in the capital was temporarily engaged by the Government. Triumphal arches were erected on the roads, the roads themselves were repaired or remade: flags, decorations and bunting made their appearance everywhere. The merchants in the town did a roaring trade supplying wines, provisions,

etc., to the Palace. From the country came in flocks of cattle and sheep, and countless loads of grain and native beverages. All Government offices were closed in fact, if not in theory.

At last the day arrived. It had been decided to hold the actual ceremony at an early hour at the Palace of the Empress Zauditu. Of the foreign community, only the actual heads of the Legations had been invited to this ceremony, and even with this limited audience the tent erected for the purpose was crowded.

The Abyssinian Church, which forms part of the Coptic Church, has at its head a Coptic Bishop sent from Egypt, known as the Abuna. At the moment, however, there is no Abuna, the last having died in 1926, and no new appointment having been made in consequence of the death about the same time of the Patriarch in Egypt, whose duty it is to appoint the Abuna for Abyssinia. In the absence of the Abuna, the Chige, who is next in the Church hierarchy, was the leading priest present.

After prayers, the Chige opened the proceedings by stating that the present ceremony was for the purpose of witnessing the presentation to H.M. Taffari Makonnen by H.M. The Empress Zauditu of a crown.

The actual ceremony of the coronation was not seen, as a curtain was then drawn round their Majesties. It is understood that the Empress placed the crown on the head of King Taffari, and presented him with a sword, stating that she thereby conferred on him the title of King, and prayed that one day he might wear the Imperial Crown.

The curtain was then withdrawn and complimentary speeches were made. A salute of 21 guns was fired and the coronation was publicly proclaimed.

King Taffari then proceeded to the neighbouring Church of Selassé, where a numerous gathering of Abyssinians and foreigners was assembled. A lengthy service was held, followed by a procession to the King's

CYPRUS.

(From a Special Correspondent.)

Nicosia, November 1.

The Church at Troodos.

On Saturday, October 27, the Governor visited Troodos in order to dedicate the Foundation Stone of the new Anglican Church, to be named the Church of St. George. Sir Ronald Storrs arrived at the site at 2.30 p.m. accompanied by Major Lanyon, O.C. Troops, and the A.D.C., and was received with the Royal Salute by the Guard of Honour found from "C" Company, 2nd Bn. The Green Howards, under the command of Lieut. Snelling. The officiating clergy were the Rev. Canon Newham, O.B.E., Rev. Harold Buxton, and the Rev. F. H. Dunnford, of Khartoum. Amongst those present were Mrs. Lanyon, Mr. and Mrs. Llewelyn Jones, Capt. and Mrs. Mackay, Capt. Jenkins, Mrs. Petrides and Mr. Cecil Lee.

The service opened with short prayers, after which the Governor deposited and sealed up in the stone certain mementoes, which included a Cyprus Jubilee crown piece, a uniform cap badge and button of the Green Howards Regiment and a list of the first subscribers towards the building of the church.

In addressing the assembly Sir Ronald Storrs first paid tribute to the energy and zeal of the Rev. Harold Buxton and Mr. H. Ll. Jones in raising sufficient funds to begin the building; and laid stress on the generous help given by the detachment of the Green Howards, whose effort was particularly unselfish in that they themselves would not benefit by it. He pointed out the great need for a church on Troodos, owing to the inconvenience and unsuitability of holding religious services in a military recreation room. Sir Ronald expressed the view that, though not ostentatious on this subject, the British race were as truly religious as any other; and when sealing up these evidences of their faith in the power of religion he was led to conjecture who and what type of man in some distant age would open them. He considered that, however vast the differences might be between us and these unknown successors, they could not fail to recognise and be inspired by the devotion of purpose which had prompted the building of this church.

The Governor then dedicated the Stone, and Canon Newham pronounced the blessing.

At the conclusion of the ceremony Sir Ronald Storrs adjourned to the parade ground and presented the Challenge Shield for inter-platoon sports and games during the past year, which was won by No. 12 Platoon of the Green Howards. His Excellency then left by car for Amiandos, to open the new bakery at that place.

About £500 has been raised for the Troodos Church, but if a building in keeping with the old Cyprus churches is to be constructed a sum of at least £800 is needed, and it is hoped that contributions will still be forwarded to the Troodos Church Fund, c.o. H. Ll. Jones, Esq., Ottoman Bank, Nicosia.

REFORMS IN AFGHANISTAN.

A recent number of the *Aman-i-Afghan* of Kabul contains an official account of the sessions of the Loya Jirga, or Grand Assembly. Telegraphic summaries of the reforms that are to be introduced into Afghanistan have already appeared in the daily Press, but a fuller account contains additional points of interest.

In its opening session the Loya Jirga decided that the Council of State should in future be replaced by a National

Assembly of 150 members. No Government servants would be eligible for election to this Assembly, nor would foreigners who have acquired Afghan citizenship, unless they had resided for at least ten years in Afghanistan. At subsequent sessions of the Loya Jirga provisions were made for the constitution of Special Cabinets from among the Ministers. In certain cases Cabinet meetings would be attended by the King in person. The period of military service, it was decided, should be extended from two to three years, and the old system of payment in lieu of military service was abolished.

Medals and Uniform.

In future medals are to be awarded only for military service, and those already in possession of medals must not wear them, although they may retain them as souvenirs. No Afghan subject is to be permitted to accept medals from foreign countries.

All ceremonial uniforms and dress are abolished, as also are all forms of complimentary address. All forms of address are in future to be in plain language. Civil dress is to consist of a black suit, while military uniforms are to be of khaki-coloured material.

The Powers of Mullahs.

No Mullahs or Ulama are to be allowed to preach without an official permit to do so, issued by the provincial authorities.

It was proposed that a certain fixed sum should be levied by way of contribution to Government from every independent member of the population, and that every Government official should contribute one month's pay. The money thus raised would go towards the payment for the 50,000 rifles and ammunition purchased from France.

Bribery and Ostentation.

Very stringent measures are to be taken for the suppression of bribery, which of late has become notoriously rife throughout all official circles. It was decided by the Loya Jirga that when an official first entered Government service a list should be made of all his property, and records should be kept of his income and expenditure. A check should be kept on the number of domestic servants employed by officials, and the latter would not be allowed in future to have more than one wife. An effort would also be made to ban unnaturally early marriages.

New National Flag.

In its final session, the Loya Jirga decided that the existing black flag should be abolished in favour of a tri-colour. The proposed new flag is to be black, green, and red, bearing emblems of the rising sun, a stack of wheat, and legends "Allah" and "Muhammad."

It was finally decided that the Loya Jirga should re-assemble in future every five years, that the members should return to their provinces, and that arrangements should be made to hold elections for the National Assembly.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 25.

The Statutory Commission.

The Statutory Commission has been hearing evidence at Poona throughout the week. Even if the best part of it was not heard *in camera*, there would be little profit in discussing it, while we have only the newspaper reports to rely on; for they are most fragmentary and disjointed, and are only in the papers because the editors feel that they must give something, and that there may be a *mot* of Sir John's worth quoting. There have been perhaps one or two. The Commission goes to Lahore to-morrow. The local reports say that there are plenty of people in the Punjab ready to co-operate with the Commission.

A Lahore correspondent of the *Statesman* is even unkind enough to write: "It is noteworthy that very few . . . even of the class of Muslims susceptible to Khilafat tub-thumping, have attended meetings "to popularise" the Nehru Report, and to stiffen the boycott movement. This is due to the fact that *the two most distrusted of Hindu politicians* [the italics are mine], Pandit Malaviya and Lala Lajpat Rai, are the leaders of the "popularisation" and boycott movements." It serves them right, that men should think of them so. The *Review of India*, the organ of the European Association, has a cartoon in the October number. Sir John is seated at a table, reading a memorandum; the floor to his right is littered with others, and a *dak* peon is bringing in a basket full of new ones. Underneath, in large type, is "Non-Co-operation!"

The Nehru Report.

The Nehru Report began with a good press, but at the beginning I said, if I remember rightly, that the bad press would come when the chorus of approval had died down. It has not been, of late, so much the Nehru Report itself that has been shown up, as the Lucknow Conference that adopted it. Mr. Rafi Ahmed Kidwai, the Secretary of the Constitution Committee of the All-Parties Conference at Lucknow, recently challenged the correctness of an opinion expressed by Sir Muhammad Shafi; the opinion, namely, that the Lucknow Conference was a one-sided affair.

Sir Muhammad Shafi has now issued a statement in which he says: "Can Mr. Kidwai or anyone else deny that representative Mussulmans were refused admission to the meeting in spite of their persistent requests? Can he or anyone else deny that certain amendments sent in by Maulvi Muhammad Yakub, Deputy President of the Assembly, and by Maulvi Muhammad Shafi Dandi, a Swarajist leader, were arbitrarily disallowed by the President? . . . The fact is well known that over the question of the boycott of the Royal Commission a wide divergence of opinion prevails among the Indian Mussulmans, a majority of them being opposed to the boycott and a minority being in its support. The real question at issue is, were an invitations issued to the organizations repre-

senting the former school, to send their representatives to the Lucknow Conference? If not, it necessarily follows that the Lucknow Conference was a one-sided affair."

Waltair-Vizagapatam Floods.

Very heavy rain in the Waltair-Vizagapatam district has seriously damaged the railway for a hundred miles, with a loss of lives that includes those of two European officials of the railway, Mr. Taverner, the District Traffic Superintendent, and Mr. Temple, the Assistant Traffic Superintendent, and a fireman. The three were on the engine of a relief train, and were creeping over a bridge, when it collapsed into the flood beneath. The mail that left Madras for Calcutta on October 20 was still stranded at Tuni station up to a late hour last night, and probably still is there. A mail that left Calcutta for Madras had to put back. Mails and passengers to Madras have now to go *via* Manmad or even Bombay. It takes one five days going that way. Oddly enough, I had made up my mind to go to Madras, and then on to Colombo, during these Durga *pujas*, and only thought better of it at the last moment, while I spent a short holiday in Vizagapatam in 1923, and left for Calcutta only just before the terrific storm of that year.

Southern Punjab Railway Company.

The public announcement has been made that the Secretary of State will exercise his right to purchase the Southern Punjab Railway on December 31, the sum payable to the Company being five and a quarter million sterling. The total main line mileage is 428 miles. As the Government are to take over the Burma railways next January, the end of the financial year will see only three big railway systems under company management, namely, the Bombay, Baroda and Central India, the Bengal-Nagpur, and the Bengal and North-Western. I remember, more than twenty years ago, having to meet the charge of a young, hot-headed Indian student-politician, that the Government's record in the matter of railways alone was enough to condemn it to all eternity. I wonder what he thinks about it now. Sir John Simon remarked to a witness the other day that India is full of minorities. It is full of them, also of a great many other things.

British India Trade Returns.

The Trade Returns for September show imports of private merchandise totalling Rs.20,71 lakhs, or an increase of Rs.30 lakhs compared with August, while the exports and re-exports of produce and manufactures totalled Rs.24,84 lakhs, or a decrease of Rs.2.10 lakhs compared with August. Taking imports and exports of treasure and currency notes into account, the total visible balance of trade in September was Rs.3,34 lakhs in favour of India, compared with Rs.4,47 lakhs in August, and Rs.5,65 lakhs in September a year ago. The visible balance of trade for the six months ending September was Rs.25,94 lakhs in favour of India, compared with Rs.17,32 lakhs in the first six months of last year.

18, OLD BROAD ST., LONDON, E.C.2

General News.

We had very heavy rain in Calcutta last Friday, and more on Saturday; so as almost to give the impression that this year's monsoon had forgotten how to stop. It does seem to have stopped at last, and the air is a little cooler. So, at least, a man remarked to me yesterday, but I could tell him that a chemist in Park Street still had his prickly heat advertisement at his door. We are looking forward to the Cold Weather, which should be a livelier one than the last; for Lord and Lady Irwin are to be here from December 12 to January 2. The Viceroy's illness prevented His Excellency from visiting us a year ago. After all, there is to be no band playing in the grounds of the Victoria Memorial, for no one wants it enough to be ready to pay for it. An acute shortage of petrol is reported from Darjeeling; influenza is rampant in a *taluka* in the Central Provinces; and I think that is about all the Indian news of the week.

BURMA RICE.

(From a Correspondent.)

It is greatly to be hoped that the recent shrinkage in the quantity of rice exported from Burma does not signify a permanent decline in the trade. From April to August last the value of the exports aggregated only Rs. 12 crores as against Rs. 18 crores in the corresponding months of the previous year. This is a big drop, and it is reported to be due to the competition which Burma nowadays has to face from some of the southern European countries, and from Siam and Indo-China. Countries such as for example, Germany, the Netherlands and Italy, which have been always prominent among the consumers of Burma rice, are now said to obtain a good portion of their supplies from the European producing countries. Similarly Japan, China, and other eastern consumers, including even Ceylon, are taking rice in increasing quantities from Siam and Indo-China. In the case of Japan the reduction in the quantity of Burma rice imported is very marked, the total being only one-seventeenth of the total for the corresponding months of the previous year. Undue importance ought not, of course, to be attached to the returns for a period so short as five months; and it may be that the figures for the complete year will give a difficult result. But all the same the reduction is a little startling, for rice is the all-important crop in Burma. It "dominates the agricultural energies of the country," the Agricultural Commission said the other day, and this is unquestionably the case, seeing that of the 20 million acres of cultivable land in Burma 11½ millions are under rice.

Mr. C. M. Young, Secretary of the Army Department, left Delhi on October 28 for a tour of the North-west Frontier.

Sir Leslie Wilson, the outgoing Governor of Bombay, is now on the second stage of his farewell visit to Sind, and on November 3 visited Sukkar.

Mrs. Irani, wife of a Bombay merchant, returned to India from Persia by aeroplane. She flew from Teheran to Bushire, 750 miles, and is the first Indian woman to fly. Mrs. Irani is reported to have enjoyed the trip and soon shook off her nervousness.

The Secretary of State for India has appointed Mr. D. T. Monteath, O.B.E., as his Principal Private Secretary; and as his Assistant Private Secretaries, Mr. J. P. Gibson and Major G. H. G. M. Cartwright (temporarily).

Raja Sir Rampal Singh, a member of the Council of State, has withdrawn his resignation of the presidentship of the Oudh Hindu Sabha, having heard that the reports of the Sabha's connexion with the Hartal and black flag demonstrations on the Simon Commission's arrival at Lahore were misleading.

THE STATUTORY COMMISSION.

Final details of the Commission's provincial tour programme are now available, being supplementary to the provisional itinerary published in *THE NEAR EAST AND INDIA* on September 20.

From Poona, as already announced, the Commission proceeded to Lahore and then to Karachi. The remainder of the itinerary is as follows: Peshawar: November 16 to 19. Delhi: November 21 to 27. Lucknow: November 28 to December 11. Patna: December 12 to 20. Calcutta: December 21 until Christmas holidays. Shillong: January 2 to 11. Calcutta: January 12 to 27. Rangoon: January 29 to February 14. Madras: February 18 to March 3. Ootacamund: March 4 to 11. Delhi: March 25 to April 11. Bombay: April 13.

The place indicated in each Province is the Headquarters at which the Commission will spend the greater part of its time.

Not the least instructive, if a somewhat neglected, feature of all such inquiries is the innumerable brochures compiled for the investigating bodies by official and other authorities on various aspects of the particular problems under review. The mass of such material placed at the disposal of Sir John Simon and his colleagues on the Commission and the Committee of the Central Legislature naturally attains formidable dimensions. Of the separate official memoranda those compiled by the Government of India are of outstanding interest and importance. For example, there is a comprehensive review of the system of administration in the North West Frontier Province, where the Commission is at present engaged in hearing oral evidence. Another memorandum discusses the claims which have been made for the redistribution of provincial territories on racial or linguistic bases, e.g., the transfer of Sylhet from Assam to Bengal, amalgamation of Oriya-speaking peoples, and formation of separate provinces for Tamils, Andhra, Kanda and the district of Delhi.

Another note explains the position of the Governor in regard to Indian States not in direct relation with the Governor-General in Council. Then there are short sketches on the existing reformed Constitution and on the operation of the Constitution in the Central Government.

One memorandum relates to the development and working of the representative institutions exclusively devoted to the subject of communal disorders. Communal representation in legislatures and local bodies are also dealt with in a separate note. The progress of education in British India during the decade of 1916 to 1926 is recorded in a memorandum. Next is the question of proposed legislation to debar Courts from premature interference with legislatures. Questions of Coorg, Andamans and Nicobar Islands and other Agency work are also dealt with in separate notes.

Elaborate memoranda are given on financial subjects dealing with financial relations between the Government of India and Provincial Governments under several heads. Some instances are given in which the question of powers of the Government of India of administration or of control over particular subjects has arisen during the working of the existing reforms. Another note gives a summary of the action taken upon the Muddiman Reforms Enquiry Committee Report.

The questions of introduction of reforms in Baluchistan is dealt with in one note. There is a memorandum on the representation of commerce, industry, labour education and other interests in the Provincial and Central legislatures and another on the position of High Courts. A note deals with the thorny question of the Meston Settlement and revision of sources of revenue between Central and Provincial Governments. The system of administration in Ajmer-Merwara is separately dealt with.

There are also memoranda on the superior civil services in the India and the Public Service Commission and on the status and position of India in the British Empire.

"INDIA; THE NEW PHASE."

BY SIR VALENTINE CHIROL.

The Westminster Library has added a very useful little volume to its series. There are in this country many people who are quite conscious of its great responsibilities in India, but have not time for any exhaustive study of Indian conditions or Indian political problems. The great War brought India nearer home to all of us when an Indian army was brought over to Europe at the beginning of the War and Indian troops stood shoulder to shoulder with our own on the battlefields of France, gallantly filling up, in circumstances peculiarly trying to them, the gaps in the "thin red line" during the winter of 1914-15, until Kitchener's armies and the Dominion contingents could be fully equipped and trained to take the field.

It was in recognition of India's war services and of the real enthusiasm with which they were rendered that the Prime Minister, then Mr. Asquith, gave his solemn promise that Indian affairs would henceforth have to be regarded from a new angle of vision. The Declaration of British policy in 1917 and the Government of India Act of 1919, constituted, as most Englishmen believed, the generous fulfilment of that promise. But a large section of politically minded India thought otherwise, and, as India was moreover suffering then (like the rest of the world) from severe War shock, the introduction of the new reforms provoked widespread opposition and was followed by a violent agitation, under the name of Non-Co-operation, which threatened at times to develop into a quasi revolt against British rule. The ordinary Englishman was at a loss to account for so perplexing a reaction to the liberal policy of Parliament and the legislative measures, which went, he thought, very far to meet the legitimate demands of Indians for a larger share in the government and legislation of their country.

The two authors of a little volume bearing the above expressive title have undertaken to provide English readers, whose minds have been often confused and almost bewildered by these untoward developments, with a clear and very simple exposition of what has happened during the last ten years in India. They have each had a long experience of public affairs out there. One of them, Sir Stanley Reed, who was for many years Editor of the *Bombay Times of India*, a leading English newspaper, has made a special study of Indian economics and of the highly technical question of Indian finance and currency. He is standing as Conservative candidate at the next General Election for the Stourbridge division of Worcestershire, and though India is not likely to bulk very large in the minds of his constituents, he has doubtless been impressed, as he canvassed them, by the lack often of the most elementary understanding, not only in Worcestershire, but all over the country, of the issues which the coming Parliament will have to face when the Simon Commission has completed its arduous inquiries in India and drawn up its momentous report on the workings of the reforms during the last decade and the measures to be adopted in view of the modifications that experience may show to be possible and desirable. Mr. Cadell, on the other hand, contributes the intimate knowledge of Indian administration which he has gained in the course of a distinguished career as a member of the Indian Civil Service. Their collaboration has been so successful that it is difficult to trace the contributions which each of them has made to their common task, and quite impossible to assign any greater measure of credit to the one or to the other for their joint work. All that one need say is that they have together produced a little book which can best be described as an admirable text book for the average British citizen who is conscious of his share in the country's heavy responsibilities for a

remote dependency with a population of over three hundred million, more distant from him in race, religion and social institutions than it is even geographically.

The New Phase outlines briefly but carefully the general scheme of reforms which it inaugurated, and describes, equally simply, the variety of circumstances which caused or intensified the storm of opposition they met with. Other aspects of the present situation are dealt with in a series of short chapters: the position of the largely autonomous native States which represent one third of the total area of India and one fifth of the population, whose relations with the rest of British India under direct British administration are now being examined afresh by the Harcourt Butler Commission of Inquiry; the question of Indian defence which is being brought into the foreground by the demand for the complete "Indianization" of the Indian army, until recently almost exclusively British controlled and officered; the needs of Indian agriculture on which more than three-quarters of the population are directly or indirectly dependent for their existence, and those of the new industrial India, mainly a modern product of Western importation that received a tremendous impetus during the Great War and has now derived a fresh stimulus from fiscal autonomy and tariff protection; and, last but not least, education and social progress on which alone political advancement can be securely based.

The impartiality displayed by our authors has kept them off controversial lines which are often too prominent in both Indian and English writers. They have confined themselves, as far as possible, to a statement of facts and conditions which can challenge none but the most extremely partisan criticism. This little book has, we repeat, been clearly written for the guidance of English readers who want enlightenment in the simplest shape as to the present situation in India and our national duties towards her. We wish it all the success which it amply deserves.

INDIAN NOTES.

(Continued from page 571).

ment, the mutual recriminations and flat denials of statements made by either party which are such outstanding features of the earlier evidence show clearly that Sir Charles Fawcett will have difficulty in confining the discussion to three specific questions which the Committee is required to answer. Nor, as we have previously remarked, is there so far the slightest disposition on the part of those conducting the operatives' case to agree to accept the Committee's findings. Meanwhile that the state of the industry is still precarious is evident from the evidence given by Sir Joseph Kay last week, when the former Chairman of the Millowners' Association produced a balance sheet for the Bombay mills showing an aggregate loss of seven lakhs last year, after allowing for depreciation.

The Right Rev. Dr. George Herbert Westcott, Bishop of Lucknow, of Allahabad, and for nearly forty years in the service of the Church in India, who died in January last, aged 65 years, left personal estate in England of the net value of £5,716. Probate of his will has been granted (as regards his English property) to the Public Trustee, as attorney for the Administrator-General of United Provinces of India, named as executor of the Will. His bequests included: 10,000 rupees to the head of the Cawnpore Mission (S.P.G.) as to 5,000 rupees for the Cawnpore Indian Pastorate Fund, and as to 5,000 rupees to the Westcott Fund; 5,000 rupees to the Lucknow Cathedral Building Fund. The following bequests to the Diocese of Lucknow (as endowments of which the income only is to be used): 10,000 rupees to the Indian Clergy Fund; 10,000 rupees to the Additional Clergy Fund; 10,000 rupees to the Preparation of Candidates for Holy Orders; 10,000 rupees for the support of mission work in Bulandshahr, or other parts of the diocese; 10,000 rupees for the scholarships for European or Anglo-Indian children; and 10,000 rupees for scholarships for Indian Christian children.

"India: The New Phase." By Sir Stanley Reed, K.B.E., and P. R. Cadell, C.S.I., C.I.E. (The Westminster Library. Philip Allan and Co., Ltd. 3s. 6d. net.)

EDUCATION IN INDIA IN 1925-26.

The appointment of an Education Committee as an auxiliary to the main inquiry with which the Statutory Commission is charged lends additional interest to the annual report on the progress of education in all the provinces of British India in 1925-26 now available. The functions of the Auxiliary Committee, as was pointed out in *THE NEAR EAST AND INDIA* of August 16, are primarily to advise the Commission respecting the growth of education, consideration of which forms one of the most important of the terms of reference to that body.

During the year 1925-26 there was an exceptionally large increase in the number of scholars under instruction. The number of recognised institutions increased by 9,362 and the number of scholars by 690,967, the corresponding increases during the previous year being 9,371 and 513,778 respectively. The number of scholars reading in recognised and unrecognised institutions increased by 700,049, as against an increase of 498,988 in 1924-25. The number of recognised institutions and the number of scholars increased in all the provinces, but out of a total increase of 9,362 institutions as many as 3,550 were opened in Madras. This province also showed the largest increase in the number of scholars, 156,121, but was closely followed by the Punjab with an increase of 140,250 scholars.

The percentage of males under instruction in recognised institutions to the total population was 6.5 as against 6.0 in 1924-25, and the percentage of females under instruction was 1.3 as against 1.2 in the previous year. The rise of 0.5 per cent. in the percentage of males was the largest increase recorded in any year during the last ten years, and though the percentage of 6.5 is still far from satisfactory, it compares very favourably with the figure for ten years ago, which was only 4.7. Unfortunately, the percentage for females has risen extremely slowly. It was 0.9 in 1916 and after ten years it has increased to only 1.3.

As has been pointed out in successive reports, while the numbers reported to be reading at school show satisfactory increases, the duration of school life in the primary classes continues to be distressingly short. All the reports from the provinces show that the problem of stagnation in the lower classes is still a pressing one.

It is sometimes assumed that if compulsion could be universally adopted, wastage would disappear, but, while compulsion will prevent the large withdrawals which take place from each class, it cannot entirely eradicate stagnation. The Punjab and other provinces have been discovering that one cure for the evils of stagnation lies in better schools, with larger and better trained staffs. The necessity of eliminating the single-teacher school of moderate size is being increasingly recognised in the provinces and in the 500 single-teacher schools of any kind.

The total expenditure on education has increased by the very large figure of Rs.1,90,90,310 as against an increase of only Rs.97,11,973 in the previous year. To his increase Bombay contributed Rs.37½ lakhs, the Punjab 29 lakhs, Burma 27 lakhs, Madras 26 lakhs, and Bengal 21 lakhs. The average annual cost per scholar to Government varies in the provinces from Rs.18-8 in Bombay to Rs.2-13 in Bihar and Orissa. In the vast, sparsely populated area of Baluchistan the cost to Government is as high as Rs.45-8. The total cost per scholar varies in the provinces from Rs.36-4 in Bombay to Rs.10-9 in Bihar and Orissa, the total cost in Baluchistan being as much as Rs.84-11 per scholar.

The number of secondary schools increased from 10,053 to 10,837 and the number of scholars reading in them from 1,547,601 to 1,716,147. The total expenditure rose from Rs.5,89,17,635 to Rs.6,31,10,572. The largest increase in the number of scholars occurred in the Punjab, in which province there was an increase of as many as 84,532 boys reading in secondary schools. But this large increase was mainly due to the conversion of 525 primary schools into lower middle schools, which are classified statistically as secondary.

The Director of Public Instruction, Punjab, discussing the problem of communal institutions in the Punjab, writes as follows:—

"This state of affairs is most dispiriting and reveals the unhealthy atmosphere in which a large proportion of the rising generation is receiving its training. Much has been said and written in recent years on the subject of communal tension, but it is peculiar that the problem of communal schools has not been subjected to a closer scrutiny. Conditions in the Punjab being what they are, it is at least open to question whether it is advisable for boys to be trained in a narrowly communal environment from the cradle to early manhood." The remedies suggested are a closer scrutiny of applications for recognition and grant-in-aid in the case of those schools where the main motive appears to be that of competition; and greater encouragement to public authorities to institute schools which will appeal to all communities. Another serious evil which is discussed in the Punjab report is the insecurity of teachers in communal schools. Some action has already been taken in order to lessen the evil, by making it a condition of recognition and admission to the grant-in-aid list that the standard provident fund rules should be accepted. Other remedies discussed are the introduction of incremental scales of pay for all posts and the giving of some rights of appeal to teachers who are dismissed without due notice or without sufficient reason.

The number of primary schools for boys in India increased from 150,957 to 157,350 and their strength from 6,457,591 to 6,884,786. The largest increases in enrolment occurred in Madras, the United Provinces and in Bihar and Orissa. In Madras the number of schools increased by 3,287 and their strength by 138,959. In the United Provinces the number of schools increased by 870 and their strength by 76,750, and in Bihar and Orissa the number of schools increased by 1,129 and their strength by 63,703. There has been a satisfactory increase of 32 municipal areas and 175 rural areas in which compulsion has been newly introduced during the year 1925-26, but there has been no move forward in Bengal and Assam and no legislation to enforce compulsion has as yet been introduced in Burma.

The Punjab has made rapid progress in the introduction of compulsion, especially in rural areas. In Madras, although only 5 more municipalities and 2 rural areas introduced compulsion during the year under review, sanction was accorded to the levy of an education cess in as many as 18 taluk board areas and 6 municipal areas and by the end of the year 25 municipalities and 95 taluka boards were levying the cess—a necessary, if not universally recognised, preliminary which affords the means of obtaining the funds required for the introduction of compulsion. *Festina lente* is a sound principle in compulsory education as in other activities of life.

Bengal, which has hitherto sanctioned no scheme of compulsion under the Bengal Primary Education Act of 1919, has a new Primary Education Bill under consideration. The draft Bill "takes as the obvious basic necessity the raising of additional revenue by local taxation." In the United Provinces 5 new municipalities introduced compulsion during the year and, though the progress made has shown great variation as between board and board, it is reported that the progress made in the municipalities which had already introduced compulsion has generally been good.

The Director of Public Instruction in Burma does not appear to be hopeful about the introduction of compulsion in Burma and states that "It does not appear that in those provinces, where Acts are in force, elementary education prospered more than elsewhere, and perhaps we are fortunate to have escaped an Act." The problem is complicated in Burma by the existence of some 17,000 private Monastic Schools which cannot be ignored in any scheme of compulsory education.

The number of recognised institution for girls rose by 1,135 to 27,110, and their strength increased by 65,510 to 1,060,104. The percentage of girls under instruction to the total female population is highest in Madras and Burma (2.3) and lowest in the United Provinces and the Central Provinces (0.5). Madras has the largest number of girls at school, nearly 490,000, and Bengal comes next with 100,000 less. Bombay is third on the list and Burma fourth. Co-education is general in Madras and Burma, 53.9 per cent. of the girls in Madras and 75.1 per cent. of the girls in Burma being in schools for boys. But in Bengal, which has the largest number of separate schools for girls, only 14.3 per cent. are in boys' schools, and in the Punjab only 3.5 per cent. Of the total increase of 127,049 girls in recognised institutions as many as 110,637 were reading in primary schools, and of the total increase of 65,510 in the strength of girls' schools 54,230 were confined to the first two primary classes.

There has been a rapid expansion of Muhammadan education in recent years. With the exception of the provinces of Bombay, Bengal and Assam it is only in the sphere of higher education that the Muhammadan community is backward. In Madras, the United Provinces, Burma, Bihar and Orissa and in the Central Provinces the percentage of Muhammadan pupils under instruction, both for boys and for girls, is higher than the percentage for all communities taken together and in the Punjab Muhammadan boys are on a level with the male scholars of all communities. In Bombay, Bengal and Assam the percentage of Muhammadan pupils under instruction is lower than the percentage for all communities together.

Owing to differences in the manner of classification in the provinces it is difficult to give accurate figures for the total number of depressed classes under instruction. The majority of the provincial reports, however, now classify "untouchables" or outcast Hindus separately from Aborigines, Hill Tribes and other backward classes. Leaving aside Burma, where there are no untouchables, and Assam in which province it is impossible to distinguish between the large numbers of Aborigines and Hill Tribes and the actual untouchables, the total number of depressed class pupils reading in all classes of institutions in the remaining seven provinces was approximately 667,000. The percentage of depressed class pupils under instruction to the total depressed class population of these provinces was 2.3 as against the all-India figure for all communities of 4.0. The number of depressed class pupils has shown a satisfactory increase, but much leeway has still to be made up and in all provinces, except Bengal, the number of scholars reading at the secondary and University stages is depressingly small. In Bombay there was an increase of nearly 6,000 depressed class pupils under instruction, and the Director of Public Instruction, Bombay, reports that "the prejudice against the depressed class children is lessening. In the Deccan there is little doubt that these communities are sharing in the general awakening of the backward classes. There are fewer signs of any such awakening in Gujarat." The Director of Public Instruction in the United Provinces also reports that caste prejudice is breaking down and states that "there is now no strong opposition to these boys reading in the ordinary board schools and a number of high caste boys were found to be reading in a number of schools for the depressed classes."

ARABIA—AN UNBIASED SURVEY.

Under the heading of "Arabia—An Unbiased Survey," Mr. Amin Rihani lectured to the Central Asian Society at Burlington House on November 7. Brigadier-General Sir Gilbert Clayton, High Commissioner-designate for Iraq, who was in the Chair, before introducing the lecturer, mentioned the loss which the Society had sustained in the recent death of Lord Carnock. He then spoke of Mr. Rihani as having attained some eminence as journalist and author.

The lecturer began by referring to his parentage. It was at the age of ten that he had left Syria for the United States of America. His love for Arabia was not derived primarily from Arabic sources, for what had first fired him were the writings of Washington Irving and Carlyle. Then came Burton, who brought Arabia to him; Doughty, however, carried him to Arabia. His intellect was, therefore, a complex of the East and the West, for although his point of view might be that of an Arab, his intellectual heritage—which was Anglo-Saxon—made him place the attachment to truth above all racial, religious, and political attachments.

In an interesting way Mr. Rihani developed the question of the accessibility of truth. Was perfect impartiality possible on either side in, say, an Anglo-Arabian or an Anglo-Egyptian dispute if the points of view clashed? The Arab who went on a *ghazzu*, for instance, could see the truth only in the loot: he could not see it in the other man's right of possession. And the man in possession, whether herding his camels or ploughing his field or just sitting upon his pile, could not see the truth in the circumstances that drove the other man to the *ghazzu*. In the highest summit of human development, however, force should be condemned, and it was from this summit of civilisation that he carried in his heart a beacon to light his way through Arabia.

He went to Arabia, he claimed, with no preconceived ideas: he came out of Arabia with no misconceived opinions. Before he landed in Jidda he had an exaggerated notion of ex-King Husain's power (an error for which the British Government was responsible). He soon found that little way outside Mecca and Madina did the Sharif's writ run: beyond that limit were tribes out of his hand and not yet in Ibn Saoud's. These tribes were in the hand of the devil. They represented ignorance in arms, without a hand to control them, not a mind to direct them for their good. The Harb and the Ataibah and the Juhainah, as well as the Sharifs of Zu Hasan round Lith and Qunfudha, were all out for loot.

In the Yaman, however, between Aden and Sanaa, the position was worse. For there were ignorance and fanaticism in arms, and some of it under the protection of the British Government. The Imam Yahya, moreover, was using the power which he had against the Idrisi of Asir. The "happy Yaman" enjoyed a mediæval social condition—no schools, no hospitals, no doctors, no drugs, not a decent inn.

When he arrived at Sanaa, the Imam was away, and the lecturer was held in captivity for seven days. He had been suspected by the British in Aden, and was now suspected by the Imam at Sanaa! A letter of introduction from King Husain was useless, because although several flattering attributes had been ascribed to the bearer of it, it omitted to mention his name! But finally it became known that "the bearer of the letter is Amin Rihani, and he is suspected by the British Government." He then was able to interview the Imam. After explaining that he was a "self-appointed missionary of civilisation," Amin Rihani pleaded for an understanding between the Yaman and the British Government and for a treaty with King Husain: he appealed for education and peace.

The lecturer then developed his idea of a Yamani-British reconciliation. This might easily be achieved, in his opinion, by the cession of the Protectorates, which were not only a blot on the British escutcheon—their rulers having been corrupted with gold and titles—but were also unnecessary, in view of the Air Force, as a protective zone round Aden. All that was required by the British was a breathing space of, say, ten or twenty miles as far as Lahaj, for instance, in one direction. The rest of the Protectorate should be turned over to the Imam—an act which would be befriending the general tendency in Arabia towards solidarity and unification. For all the Arabs of the Peninsula, with a few exceptions, would sooner or later come under the rule of the two biggest leaders, Ibn Saoud and the Imam Yahya.

Turning to Central Arabia, Mr. Rihani narrated the history of British-Najdi relations. The friendship between the two peoples went back to the days of Faisal, grandfather of the present King Abdul Aziz. Whereas men like Palgrave and Wallin, emissaries of foreign Powers, had been unsuccessful politically, the Englishman, Pelly, was in 1865, successful. An agreement was signed between him and the Amir Faisal. Subsequently Sir Percy Cox, in 1915, signed an agreement with the Wahhabi monarch; and later still, in 1925 and 1927, Sir Gilbert Clayton was similarly successful. But Sir Gilbert had recently returned from Jidda with an empty portfolio. Why?

The lecturer then examined the present relations between Iraq and Najd. King Ibn Saoud, he said, had put an end to the *ghazzu* in Najd and in the Hijaz. Did similar conditions obtain in Trans-Jordan and Iraq? For the better control of the tribes the British Government in Iraq had built three outposts some miles (30 to 70) from the border line. The lecturer then showed how the Wahhabis based their objections to these posts on Articles 2 and 3 of the Protocol of the Treaty of Muhammarah. It had to be borne in mind that there were no boundary lines in Arabia as they were understood in Europe: the Arabs could recognise as possible boundaries only certain land marks, principally watering places and glens of pasture.

Over the wells in the rhomboid the Amarat and Dhafir, of Iraq, and the Mutair, of Najd, had long fought. The permission which was given in the Protocol of Ujair to Najdi tribes to use neighbouring wells in Iraq territory, in case of necessity (provided that said wells were nearer to them than the wells within the borders of Najd) did not specify the location of such wells. They might be within any distance. This second clause of the Protocol in fact, because of its loose phrasing, afforded no hope of peace and order. Mr. Rihani then turned to the Third Clause, and examined the problem of the Shammar of

Iraq. He disputed the wisdom of building police posts to control the Shammar some five hundred miles away from their base, or *dira*, for a party going forth on the *ghazzu* could not travel fifty miles without being detected by the Desert Patrol of the Government. Why could not the Iraq Shammar be like the Syrian Shammar, who were now "brothers with the people of Najd"? But the people of Iraq were not hostile (on the whole) to the people of Najd: King Faisal and King Abdul Aziz had recently exchanged letters of friendship, and the Baghdad Press had been warned to cease its attacks on the Wahhabis. It was for the British Government to bring the drama to a happy ending, and so not only preserve the friendship of sixty years between the British and the Wahhabis, but also consolidate its position in the Near East.

In the subsequent discussion, Mr. Cunningham Graham, author of "Mogreb et Acksa," compared the raiding in Arabia to what took place in, and was the curse of, Morocco. He thought the lecturer's suggestions for the preservation of peace in Arabia quite admirable.

Lord Lamington inquired whether Mr. Rihani was satisfied that, if the British were to relinquish certain tribes to the Imam Yahya, they would not be persecuted. To this the lecturer replied that he was so satisfied, that the Imam might have trouble with the subsidised tribes, but that he was fitter to rule them.

Mr. G. M. Lees, speaking with considerable knowledge of Arabia and of the Arabs, remarked upon the difficulty of understanding the Arab "mentality"; nor did he believe in the possibility of a united Arabia. The Arab felt that he was, given money and arms, a better man than the European; and this fact caused difficulty. Mr. Rihani's ideal was, however, an admirable one and something to be aimed at.

In conclusion, the Chairman dissented from the notion of the Oriental's having a different mentality from that of the Occidental. All the Arab wanted was to be treated courteously and to be told the truth. And, finally, he remarked that, although unable to bring back from Jidda any written agreement, he cherished King Ibn Saoud's word that the differences which had arisen were "differences between friends."

THE BRITISH SCHOOL OF ARCHÆOLOGY IN JERUSALEM.

We have received the Report of the British School of Archæology in Jerusalem for the season 1927-28, from which we learn with pleasure that the year has been one of substantial progress and unusual activity. Early in 1928 the Director, Mr. J. W. Crowfoot, arranged for the excavation of the Shubkah Cave near Lydda. Regular excavation was begun in April at Jerash, on the side of the Church of Saint Theodore. This excavation at Jerash (an account of which is to be included in the *Quarterly Statement* for next January of the Palestine Exploration Fund) involves costs that are borne in the following proportion: five-sixths from funds raised on behalf of Yale University, and one-sixth by donations to the British School from the Craven Fund of the University of Oxford, the Schweich Fund of the British Academy, the Byzantine Research Fund, and Mr. Henry J. Patten of Chicago, a Foundation Member of the School.

Since last September the Director of the School has been directing the Palestine Exploration Fund's excavation in the Tyropœon Valley at Jerusalem.

Many students of the School have been admitted or re-admitted—such as Mr. Hine, working at Beisan under Dr. Alan Rowe; the Rev. Dr. J. Chitty, who in 1927 explored the cave Church of Saint Theoctistus at Dair al-Mukalik, and has since explored and partly excavated the monastery of Saint Euthymius at Khan al-Ahmar (a few miles from Jerusalem), and the *Laura* of Saint Firmin in the Wadi Suwainit and the Monasteries of the Jordan Plain; Lieut.-Commander A. G. Buchanan, who worked at Jerash; Mr. A. H. M. Jones and Mrs. Jones, who

worked at Jerash and Khan al-Ahmar; Miss D. A. E. Garrod, who, coming to Palestine from Iraq, excavated the Shubkah Cave near Lydda, to which she hopes to return next spring; and Mrs. George Woodbury and Mrs. Woodbury, who worked at Shubkah Cave.

It can thus be seen, from the number of students and the variety of their work that the claim that the British School is performing a public service is fully justified. But it is obvious that for the continuance of this excellent work, funds are necessary. Unfortunately the Government Grant of £500 has not been renewed, and the School now depends entirely on voluntary contributions. This School is extremely well run, and expenses are kept at a minimum. It is, therefore, incumbent on those who can afford to see the history of the Holy Land uncovered, to subscribe to the funds of the School, which we commend to our readers.

As the Report says, in pointing out the opportunities that exist in Palestine, if only subscriptions are more liberally made:—

Palestine still yields valuable and significant evidence for sacred and profane history alike, almost wherever the surface is broken. It is a "promised land" to scientific research to-day, as to its invaders in antiquity, and to pilgrims in mediaeval times, and it is a region for whose recovery to civilisation our own country has been made responsible to all nations. It will be a disgrace as well as a disaster if British scholarship and research fail to take their share in this enterprise of exploration.

The Annual General Meeting of the School was held last month in the Rooms of the Society of Antiquarians, Burlington House, where Lord Plumer presided.

In moving the adoption of the Report, the ex-High Commissioner for Palestine said that from his experience during the time that he was High Commissioner in Palestine, he could assure the subscribers that nothing could exceed the zeal and energy of the Director (Mr. Crowfoot) and those associated with him in carrying out the work entrusted to them. The British School of Archæology was a distinct asset to the British Administration in that country. Other nations had parties at work, and it would be nothing short of a calamity if the British dropped out of what might almost be described as a race among the nations. The museum for Jerusalem, the magnificent gift of Mr. Rockefeller, would undoubtedly attract a very large number of scientific men, archaeologists, and historians from all parts of the world, and we should feel ashamed if, among all the nationalities that were represented in connexion with the work of archaeology, there was no British school. It all depended on the question of funds. Up to last year the British Government gave a subsidy of £500 a year towards the school. But for the last two years it did so after extreme reluctance, and the last letter that he received on the subject as High Commissioner made it perfectly obvious that it was hopeless to expect that that grant would be continued. It was, therefore, essential for subscribers to do their best to secure an assured income for the purpose of carrying on the work of the school, which was very important from the point of view of British prestige in Palestine.

Sir John Chancellor, High Commissioner Designate for Palestine, seconded the adoption of the report and said that he could assure them of his warm support of the work of the School and he wished it the greatest success.

A description of the School's excavation at Jerash was given by Professor J. L. Myres, who founded his stimulating address upon the notes of the lecture which Mr. J. W. Crowfoot delivered to the Orientalist Congress at Oxford. This lecture was summarised in THE NEAR EAST AND INDIA of September 6 last.

During the meeting drawing and plans of the Church of Saint Euthymius at Khan al-Ahmar, and its mosaic pavements were exhibited. They attracted considerable attention, on account of their transitional features, between classical Roman design and Arabesque ornament.

SOME QUEER CUSTOMERS IN PERSIA—II.

Two Sabzavari Merchants.

By H. GASCOIGNE HART.

If you look at the map of Persia, you will see that there is a small town called Sabzavar, on the Khorasan Way—a way that is as old as man—four hundred miles eastward from Teheran.

Sabzavar means "the green place"; yet few Persian towns are situated in so barren and dreary a region. There are but two gardens in the neighbourhood; the villages are treeless, scarcely to be distinguished from the plain; and the drab monotony of the landscape is relieved only in spring-time by scattered patches of green where young wheat, cotton, or opium poppies are growing. Eight miles away to the north is a range of jagged hills; while to the south, beyond a desolate salt-marsh, stands the tall, dark, forbidding Mountain of the Ewe.

Nor does the climate make amends for these depressing natural features. True, the autumn weather is delightful—as it is nearly everywhere in Persia—and the winter less rigorous than at Mashhad. But spring and summer are made hideous by frequent sandstorms, which come on without warning, and rage sometimes for three days on end.

I was returning from a ride one morning when the air was so clear and the sky so blue that even the grim Sabzavar landscape was pleasing to the eye. A lark sang above me. A couple of blue jays flew across the road. Two miles away the crenellated city walls, with a wind-tower here and there, were clear cut against the sky. A post-carriage drawn by four horses was jogging towards me. I could see the glint of sun on the harness.

With incredible swiftness the picture was blotted out! In front of me was nothing but a dark red pall. The air, at first strangely still, began to move in little puffs. Then came the howling, raging wind. The sun was veiled; the light grew dim. Sheets of sands whirled past—blinding sand—sand—more sand. Instinctively I bent forward, screwing up my eyes; while my horse tossed his head in irritation.

Making my way painfully back to my house, I found chairs, tables—everything in fact—covered with fine, red-brown dust, although the windows had been closed.

Much of his dusty atmosphere, much of his dreary environment, has entered the soul of the Sabzavari. Even his speech is affected: he has lost the sweet-sounding cadences of the Persian tongue; and his broad provincial accent makes his conversation difficult to follow. And he has none of the gaiety of the Shirazi; none of the industry of the Isfahani; none of the alert, malicious humour of the Teherani. Instead, he is full of self-complacency. A fanatic without zeal, he fails to grasp the spirit of his religion, and clings tight to the dead body of form and ceremony. Such a man is tempted by narcotics. Wine is forbidden by the letter of Islamic law; so he indulges in *shira*, a particularly noxious form of opium. Fully seventy per cent. of the people of Sabzavar are victims of this loathsome drug.

Among those who eschewed opium was a stout, rosy-faced young fellow in the twenties, called Abdul Husayn. He was a merchant only in name, for he liked an open air life and spent most of his time riding to and from from a village that he had inherited from his father. Now and then he came to me for a loan. One morning, however,

when I asked him how much he wanted, he shook his head.

"No—it's not that. An American doctor is staying with you, isn't he?"

"Yes; Dr. C—. He's on his way to Mashhad."

"Will you give me a letter to him?"

"For yourself?"

"Yes, Aqa."

Why, you look the picture of health! What is the matter?"

Abdul Husayn's rosy cheeks grew rosier. "I'm not well—I'm really very ill," he stammered.

So I gave him the letter.

Six months later he came to see me again.

"Will you translate this for me?" he asked, holding out one of Dr. C—'s prescriptions.

As the only person at Sabzavar able to write both English and Persian, I was often called upon to translate prescriptions. Taking the slip of paper, I read, under Abdul Husayn's name: "Aromatic Pills."

"I—I can't translate it!" To hide my merriment, I got up and looked out of the window. "Are you ill again?" I asked, when I had recovered.

"Oh, no!" he replied. "Thanks to Allah, those pills cured me; and then I gave a few that I had left to my sister-in-law, who had been ill for years. All the Sabzavar doctors had treated her in turn without effect. She must have died, but for those pills. Now she is well. Mashallah, they are wonder-working pills! Another lady, the wife of—"

While Abdul Husayn was speaking, I seemed to hear Dr. C—'s voice:

"There are a number of Persians," he had said, "who come to me when they have nothing the matter with them at all. If I were to tell them that their ills were imaginary, they wouldn't believe me; and they might go to some quack who would make them really sick. I'm in a quandary. So I just give them some of these—" holding up a bottle of pink pills labelled "AROMATIC PILLS"—"and tell them that they will soon be O.K. The pills are mostly sugar and are quite harmless."

"What was your complaint, Abdul Husayn?" I asked quietly.

He hesitated, confused; but I pressed him for an answer.

"The malady-of-ideas" (Neuroses).

"What did you think?"

"I thought," he said, blushing, "that my hands were swelling."

"They are!" I retorted, unfeelingly. "And they have been ever since I have known you. In fact, your whole body is swelling. You should remember Saadi's maxim:

Eat not so as to cause satiety,

Nor yet so little as of want to die."

Abdul Husayn once made me very angry. My cow had lost her calf, and her milk had run dry. He offered to keep her in his village, where he had good grazing ground. When, a few months later, she was sent back to me, there was a place on her neck which had been rubbed bare. He had allowed my milch cow to be yoked to a plough!

Another Sabzavari merchant, of whom I saw a great deal (for his office was in the Bank serai) was Hajji Mirza Sharifan.

He always put me in mind of a big, friendly cat—

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

something in his nature, I suppose; for he was well made and good-looking enough. His ample person was enveloped in a flowing brown cloak, even in the hottest weather; and he wore a large white turban, like the rest of his kind, who are so partial to the trappings of their faith that they dress like mullahs, except for their shoes. His face was round and sleek; his eyes a soft brown. He wore a beard, of course—"the badge of the dignity of manhood," according to Muhammadan tradition. His voice vibrated softly.

"*Khoda hafez!*" (God guard thee!) he greeted me, the first time he entered my office. To a Believer he would have said: "*Salâmun alaikum!*" (Peace be unto thee!) But his fanaticism wouldn't allow him to say those words to me.

Now *Khoda hafez!* is really a parting salutation. I rang my bell.

"Hajji Aqa wishes to go. Open the door for him," I said to the ferrash who answered the bell.

Hajji Aqa went; and the next time he came he salâm-ed. "You have heard, I suppose, he said pleasantly, "that I am one of the most devout and most reputable of the Sabzavar merchants."

I bowed.

"My bills are first-class paper. Have you mentioned that in your information list?"

"Oh, my list's all right!" I replied evasively.

Ramadhan came—the month when fasting is enjoined. Hajji Mirza Sharifan went on a pilgrimage to Mashhad; for the Faithful on a journey need not fast. And although they should afterwards fast a like number of days, no Muslim acquaintance of mine ever did.

After his return he brought me a turquoise—a fine stone, of a deep colour, blue as the Persian sky.

"Your kindness is very great, Hajji Aqa," I said; "but I make it a rule never to accept a present from any customer of the Bank."

Hajji Mirza Sharifan bridled.

"Aqa Rais," he protested, "it is not as a customer that I am offering you this trifle, but as a friend back from a journey."

"I am sorry, I began; "but—"

"Aqa," he interrupted persuasively, "surely you can waive your rule in favour of your landlord."

He had only a quarter share in the serai, but still—I accepted the turquoise.

He was in my office the next morning almost as soon as I arrived.

"Here are two bills on Mashhad, two on Teheran, and one on Shahrud, he said briskly. "Are you a buyer?"

"Yes," I replied slowly, taking the bills from him and looking at the amounts. "Mashhad *three shahis, Teheran four shahis, and Shahrud three shahis, discount."

"Oh, no!" he returned. "You must give me better rates than those."

"It wouldn't pay me."

"Two, three and two shahis."

"Hajji, you know that I do not haggle."

"I think you ought to make a reduction in favour of your landlord," he remarked. And then he sat back, smiling. Was it imagination, or did I hear him purring?

He left me reluctantly, taking his bills away. Later in the morning I sent back the turquoise with a message to the effect that on second thoughts I had come to the conclusion that it would be a mistake to depart from my rule. He was somewhat offended, and didn't come to see me for a fortnight. When he did come, he brought another batch of bills.

This time we agreed upon the rates, and he sealed the bills. Pushing them aside he looked up.

"Aqa," he said, "what is your opinion concerning the next world?"

"I haven't been there," I replied shortly, seeking to avoid an argument.

* Three shahis equal $1\frac{1}{2}$ per cent., etc.

"Nor I." He smiled, and then looked grave. "But I know what happens to us after death. We Muslims—"

"Hajji," I interrupted. "I came to Sabzavar to deal in financial transactions, not to speculate on conditions in the world to come."

But that day Hajji Mirza Sharifan was in a mood to display his conversational powers. He was not to be silenced.

"Do you know," he asked, "that a hare changes its sex? It is male one year, and female the next."

"Bosh!"

He shook his head. "It's true, Aqa. It must be true; for I read it in a book."

Several years after I left Sabzavar, I heard that Hajji Mirza Sharifan had gone bankrupt.

NEWS IN BRIEF.

The Acting Governor of Angola, Dr. Damas Mora, will represent the colony at the Congress of Tropical Medicine in Cairo.

The French Acting High Commissioner for Syria has prorogued the Constituent Assembly, which has been sitting in Damascus, for a further three months.

A pronounced earth shock was felt at Tifis and in the surrounding district on November 5. The epicentre is calculated to have been some sixty miles from Tifis.

The League of Nations Mandates Commission on November 7 ended its examination of the report of the British Government on Iraq in 1927.

Demonstrations against Belgrade and the present régime in Yugoslavia occurred at Zagreb on the occasion of the anniversary of the advent of the Soviet régime in Russia.

Fleet Orders notify that medical officers desiring to compete for the 1928 award of the North Persian Memorial Medal should forward copies of their articles to the Medical Director-General of the Navy through the usual Service channels before January 1, 1929.

Tirana is now supplied with electricity by a company founded entirely with Albanian capital. The town was first illuminated by electricity on November 5, on which day the first daily newspaper in Albania, the *Gazetaera*, was published.

According to a message from Trebizond, 800,000 Turks living in the Caucasus under Bolshevik rule have decided to send delegates to Mustapha Kemal Pasha to ask facilities for their emigration en bloc to Turkey.

A felucca, or native sailing-boat, transporting a number of girl flower pickers across the Nile near Abu Zabal, capsized in mid-stream on November 8. It is estimated that twenty-eight were drowned.

WAHHABI ARABIA.

"*ARABIA OF THE WAHHABIS.*" By H. St. J. B. Philby. (London: Constable. 31s. 6d.)

We have waited long for the finishing touches to the famous story of Mr. St. John Philby's mission to Sultan Ibn Saoud in 1917-18—the second volume of "*The Heart of Arabia*," it will be remembered, ended abruptly with his return to Riyadh, after the very fruitful journey to Southern Najd, in the middle of *Ramadhan*. This new and final volume, which is most excellently produced, with a truly magnificent map and several photographs and drawings of designs, begins exactly where the second left off, in *Ramadhan*, which in 1918 happened to fall in June and July. As a matter of fact, this incidence of the month of fasting in midsummer provided Mr. Philby with a fresh and unique opportunity for describing the fortitude of the Wahhabis, and particularly for extolling the personal example of the great Imam, Abdul Aziz ibn Saoud. The reader is enabled, therefore, at the very beginning of this book, to recapture the atmosphere of the strange, dour country of Najd.

First of all, however, it should be remembered that this volume has a singular value in that its author was the last European to study Najd as it had been more or less unchanged for centuries before the advent of the motor-car to the inner deserts of Central Arabia. Mr. Philby saw Najd, in fact, much as Doughty or Niebuhr saw it, and as he himself says in his Preface, Arabia can never be the same again—"the canons by which formerly we were wont to judge Arabian events and tendencies are no longer applicable."

The curtain on this Third Act of the great drama of the emergence of the Wahhabis rises, then, with the description of *Ramadhan* and of the *Id*. Always on Mr. Philby's stage one looks for the towering figure of the Imam, and one notes that during these midsummer months at Riyadh he was able, among other things, to deliver himself of dicta on the subject of the *Hanbali* school and of the Shiah schism. According to the Wahhabi leader, the Muslim faith remained as the Prophet preached it for some three centuries after his death: then, however, were disseminated all manner of heresies and perversions which are now, of course, anathema to the Wahhabi. And of the Shiahs, at any rate of the Shiahs of his own Hasa, Sultan Ibn Saoud said that he would like to have "the whole lot of them" demolished.

But the very purpose of Mr. Philby's mission to Riyadh—the attacking by the Wahhabis of the pro-Turkish Ibn Rashid at Hayil—suffered delay after delay in its attempted fulfilment. For one thing, Ibn Saoud had no very great quarrel with Ibn Rashid; for another, he wanted, rather, to attack the Sharif of Mecca or Shaikh Salim of Kuwait, who, by the bye, was apparently playing a very double game by the British, in that the blockade was thwarted by his allowing supplies into the pro-Turkish interior of Arabia. At last, however, the fateful day for the campaign on Hayil arrived, and full of hope the author set out from Riyadh on August 5. His route to the north lay through the old Wahhabi capital of Dariya, Jubaila, Ayaina, and then through the district of Western Mahmal until the country of Washm was reached. This was an important stage, for Shaqra, a town of considerable importance in commercial relations with the Persian Gulf, was the *rendezvous* of Ibn Saoud's contingents for the attack on Hayil. In Washm, a self-contained district, it is interesting to notice that a kind of desert art exists, and it was there, too, that Mr. Philby heard such poetry as reminded him of the great pagan part of the Arabs. Obviously this district was not so fanatical or bigoted as other parts of *Wahhabi-land*: of Shaqra, for instance, it is recorded that tombstones (sandstone slabs set on end) were permitted! At Shaqra, incidentally, King Ibn Saoud

declared that he coveted no title nor any territory outside the boundaries of his birthright in Najd. The passage is worth quoting:—

As for Mecca he had no desire whatever to be its master—all that interested him therein was the House of God, and that only in that it was incumbent upon him as a devout *Muslim* to visit it once in his life for a period of ten days at the outside. The forts and palaces, erected by his ancestors at Mecca, Madina and Taif, merely reminded him of an episode in the past history of Najd, and he had no desire to reoccupy them.

On the expedition went to Wushaiqir, where the author was joined by one with whose name all readers of the first two volumes of this record are familiar, and who since the War has become a prominent figure—Dr. Abdullah Said. It was this Moslawi who made Mr. Philby's next few weeks seem the more pleasant, although he could never see much good in the Englishman's preference for day-marching! By no other means, however, could the British emissary from Baghdad add to the store of the world's geographical knowledge, and by insisting on his preference he did unquestionably achieve an invaluable scientific object.

At Anaiza, the author's memories were naturally full of Doughty, for whom his reverence is as complete as is his suspicion of Palgrave. Anaiza he found a delightful city, of boundless hospitality and of most unbigoted ways. It was for him as enchanting as Buraida was subsequently churlish. But the beauty of Buraida, as a spectacle, a beauty which Doughty, who suffered extremely therein, conjured up unforgettably, does not escape the reader in Mr. Philby's very sober and exact description of this town of the Qasim.

But farther than Buraida in the expedition against Hayil Ibn Saoud would not let his British guest go, whether or not because he feared a repetition of the fate of Captain Shakespear at the battle of Jarrab in 1915 is not made clear. Our author had, therefore, to content himself with a tour of the Khubub. His feelings may be imagined. On September 9 the war-flag of Ibn Saoud went through the city gate of Buraida northwards—

The die was thus cast for a struggle which was to decide the fate of Arabia probably for a generation and possibly for much longer, and which raged over the face of the desert in the desultory fashion of Arabian warfare until 23rd December, 1925, when the green banner of *Wahhabi-land* was hoisted for the first time on the flag-staffs of Jidda. Peace was then at long last to descend upon the great peninsula which had not known peace since the beginning of time, but in September, 1918, one could only look down an endless vista of wars without knowledge of what lay beyond it. And for ten long months it had been my single-hearted endeavour to direct the steps of Ibn Saoud into that dreadful avenue. The stakes were big. The hegemony of Arabia would be the winner's prize.

It is to be recorded that Mr. Philby does not, happily, often so project himself to the future, or write of the recent past with knowledge of the immediate past; but keeps for the most part close to direct narrative.

The actual result of that battle against Hayil is, of course, well known. The Wahhabis missed a great opportunity—although the *Ikhwan* obtained the loot they wanted—and the chance of demolishing the Rashids did not recur during the War—not until 1921, in fact. Ibn Saoud himself, however, was by no means so disappointed at the result of this battle as was Mr. Philby, and invited the author to march up to meet him at Qusaiba, in the northern Qasim. It was between Shiqqa and Qusaiba that Mr. Philby encountered the worst of all the deserts he has ever crossed—a desolate wilderness in which nothing was living beside himself and his companions. It was "the very archetype of the perfect desert of human imagination, of which even Arabia can surely boast but few examples."

At Mashquq he again met Ibn Saoud, returned from the indecisive battlefield. The Wahhabi monarch was then,

apparently, in very bitter mood against the Sharif—largely on account of his attacks on Khurma—and even went so far as to say that a secret understanding existed between Mecca and Hayil, although King Husain was fighting for the Allies and Ibn Rashid for the Turks. But a few days later this bitterness became intenser when the British delegate to Najd communicated the decision of the British Government that the campaign against Hayil should not be proceeded with on account of the possibility of upsetting King Husain. This news involved the return at once of Mr. Philby to Baghdad; and so, on October 4, 1918, he set out for the coast, his final interview with the Sultan being of the pleasantest nature.

His "homeward" route lay through Zilfi and the *Najud*. By accident he nearly traversed Artawiya, the very fanatical fountain-head of the *Ikhwan*, where the Mutair, under Faisal al Dawish, might conceivably have detained him. But he successfully skirted this settlement, and then struck straight across the desert highway to Kuwait, meeting, incidentally, several picturesque *Suluba* on the march, and, at the end of it all, Shaikh Salim himself, who by no means appeared, by his manner and courtesy, the villain of the piece, which everyone in Najd, including the author himself, had declared him to be. And it was at Kuwait, where he arrived on October 16, that he learned, what to him was the quite staggering news, that General Allenby had the Turks on the run, and that his own particular aim had, therefore, been virtually achieved. To the author it seemed that the War was indeed over.

The main value of Mr. Philby's record will probably be found to be geographical. His story is not a tremendously dramatic one, like that, for instance, of T. E. Lawrence: nor can it be claimed that it is unfolded with literary art. But his assiduity was tremendous, his enthusiasm unflagging, and his observation very keen. The duty of geographical record which Fate had imposed upon him he most faithfully discharged; and it was a very considerable obligation. That these three volumes on Najd are assured of a permanent niche with the classical books on Arabia admits of no doubt whatever; they are in truth monumental.

A POSY FROM THE PUNJAB.

"ROMANTIC TALES FROM THE PUNJAB." By the Rev. C. Swynnerton Illustrated. (Oxford University Press. 10s. 6d. net.)

We have to thank the Oxford University Press for this first instalment of a comely edition of Mr. Swynnerton's extraordinarily satisfactory book, which has unaccountably been allowed to go out of print. It is offered to the public at a season when the purchase of gifts is in the air. This is fortunate, for no judicious person can well hesitate to take the hint. It will be a welcome acquisition for all young persons, and an equally welcome one for their seniors.

It is some fifty years now since Mr. Swynnerton took down these tales, and this probably accounts for the title, which is somewhat misleading. For, although romantic tales are prominent, we also find in plenty high comedy, farce, and dry humour. He jotted down the stories from the lips of travelling story-tellers or villagers in North-West Punjab, and has been unusually successful in preserving the flavour of what he heard. The feeling that we are listening in our own tongue, to the racy Punjabi of the narrators is ever present. And, apart from their value as a serious contribution to the study of folk-lore, the tales are quite first-class, whether, to mention a few, they deal with the wild romance of that splendid Ishmaelite, Raja Rasalu; the delicate story of Heer and Ranjha; the rollicking fun of the knaveries of Eesara and Caneebara, who remind us at every turn of Potash and Perlmutter; the lovely tragic legend of that gallant pair of lovers, Sahiba and Meerza; or the effectual cure of a Prince's too amorous tendencies. And good measure is made better by the inclusion of some of the little anecdotes, full of genuine Punjabi humour, which are current in every

village. As it is impossible in our space to begin to do justice to the longer tales by quotation, we should at least like our readers to appreciate the anecdote of the Buneyrwal whose wife had been drowned, with many others, in a sudden flood. He was searching for her body when he was met by a countryman who asked him why he was searching up-stream. "Ah, sir," answered the wretched Buneyrwal, "you did not know that wife of mine. She always took an opposite course to everyone else. And, even now that she is drowned, I know full well that, if other bodies have floated down the river, hers must have floated up!" Or the tale of the preacher, in the full flow of his eloquence, exclaiming on seeing a poor farmer weeping copiously: "Ah, you sinner, you are crying, are you? My words have struck home to you, have they? You begin to think of your sins, do you?" with the disconcerting reply: "No, no; I was not thinking of my sins at all. I was thinking of my old he-goat, that grew sick and died a year ago. Such a loss! Never was a beard so like the beard of my old he-goat as yours."

We feel sure that this volume will receive a very general welcome and that its readers will look forward eagerly to his successors. The charm of the book, we should add, owes not a little to the numerous delightful illustrations, by Moolchand of Ulwar, which are entirely in harmony with the literary contents.

C. S-W.

THE NEW ROUMANIAN CABINET.

The following is the list of members of the new Roumanian Cabinet, approved on November 11:—

Dr. Julius Maniu	Prime Minister.
Dr. Alexander Vaida-Voevod	Interior.
Professor George Mironescu	Foreign Affairs.
M. Albert Popovici-Tasca	Finance.
M. Junian	Justice.
M. Ion Mihalache	Agriculture.
M. Sever Dan	Public Health.
Professor Costakescu	Education.
M. Raduceanu	Labour.
M. Halippa	Public Works.
M. Madgearu	Commerce and Industry.
M. Auriel Vlad	Fine Arts.
General Cikoski	War.
General Alevra	Communications.
M. Bocu	} Without Portfolio.
M. Nizescu	
M. Saveanu	

ORIENTAL MANUSCRIPTS.

The *Times* states that the trustees of the British Museum at their meeting on November 10 received a number of important gifts, including a collection of 57 Oriental manuscripts, formed and presented by an anonymous donor. Forty-seven of the manuscripts are Persian and are remarkable for their antiquity and beauty. Several are exquisitely written and richly illuminated, such as a copy of the *Divan* of Jami, copied A.H. 895 (A.D. 1489-90) in the poet's lifetime, and one of the same poet's *Yusuf u Zulaikha*, of about the same date, which bears the name of the calligrapher Sultan; two fine copies, one dated A.H. 859 and one of the 16th century A.D., of works by Sadi, and two, of the same periods, of the *Divan* of Hafiz, the latter having "The Rubaiyyat" of Omar Khayyam written in the margins. The remainder include works by a number of classical Persian poets and prose-writers, including a copy of Jami's *Munsha'at*, written in A.H. 898, the year of his death.

Among the antiquities added to the collections are a series of 25 Cappadocian tablets from Kul Tepe, near Kaisariyah, some in an East Semitic dialect, and throwing light on the language; a plasma intaglio of the third century B.C., representing a young warrior, or perhaps Ares, seated on a rock; a Græco-Roman sard intaglio with a representation of Asklepios and the young Telesphoros, a rare subject in ancient gems, an unusual alabastron of Rhodian fabric, or of Italian work under Rhodian influence, sixth century B.C.; and a late archaic terra-cotta antifix, with a Satyric mask in relief.

H.M.S. *Lupin*, Commander Sir John Alleyne, D.S.O., D.S.C., completed refitting at Colombo on November 10 in readiness to return to duty in the Persian Gulf. The *Triad*, Captain Hector Boyes, C.M.G., Senior Naval Officer, and *Crocus*, Commander B. O. Bell Salter, have been cruising in the Gulf and arrived on November 3 at Basidu from Hanjam. The other ship of the Division, the *Cyclamen*, Commander the Hon. W. S. Carson, was already at Basidu.

THE WEEK AT HOME

London, Tuesday Morning.

After Ten Years.

Armistice Day, with its noble conception of the Two Minutes' Silence, fell this year on a Sunday, and the tenth anniversary of that fateful time seemed, therefore, charged with a special current of meaning. Not that the feeling of remembrance was intenser, nor even that it was put on a different plane—although everyone who could be present was, I think, present at his or her local War Memorial, or at some larger Memorial; but somehow the nation's act of homage to those whose memory in this generation must always inspire—die out the intervening years how they inexorably will—seemed to take on a fresh blossoming, to exude a new fragrance.

Perhaps—one cannot analyse these things—it was due to the fact that so many who were too young to understand the War were present at Memorial Services, to catch, however dimly, some of the meaning of the sacrifices made by parents and relatives before they could comprehend; perhaps it was the opportunity given, the obligation imposed, to assist at a religious service where formerly one had remembered in silence and alone; perhaps the individual heart changes, to merge in the greater sorrow of a people. However this may be, it is good to know that the British people does not forget, and that on November 11, at any rate, if on no other occasion, it can still commune with its own soul.

De-Rating.

There may be men in this country who understand the details of the De-Rating scheme of the Government, but unhappily I am not of them. In company with many other ignorant people, I had imagined that that locality which itself would benefit by the process of de-rating would alone suffer a change in its rates. Now, however, it appears that many localities which cannot benefit will have to pay additional rates. That there is a flaw in this now rapidly growing impression is sincerely to be hoped, but there is no question that alarm is genuine, and that if thousands of votes are not to be lost to the Government, prompt explanation is necessary.

There is nothing, whether in foreign politics or domestic reform, so likely to arouse antagonism to the Government of the day as an increase, in whatever cause, in the amount which the small ratepayer has to pay. The cry of Governmental ineptitude has already gone up in the country, even in Conservative circles, which assert that the Bill, however excellent in conception, will have the result (so far as they can foggily see) of introducing the principle of taxing one locality to relieve another.

Unemployment.

The shadow of unemployment in this country grows larger rather than smaller, and the debate in the House of Commons, whose power to deal with the problem is most variously assessed, was read with eagerness even by

those who believe wholly in the principles of letting every industry work out its own salvation, in accordance with the laws of supply and demand.

Mr. Clynes, for the Labour Party, opened an attack upon the Government, but his main suggestion appeared to be only that Great Britain should reconsider her commercial relations with Russia. Mr. Churchill, in a very moderately-worded reply, mentioned the Government's proposed remedies. These are: Derating of industry and agriculture, Extension of Exports Credit Scheme, Safeguarding, Empire Settlement, Extension of Electricity Supply, Enlargement of Land Drainage and Coast Erosion Schemes, and transference of workers from stagnant to active districts. This is certainly an energetic programme, but nobody, I think, imagines that it can radically alter the position, which is most depressing to all parties. In their heart of hearts most men probably realise that unemployment is a matter for the nation, not for any party.

Of the Conservatives' programme it has to be said that it does not command the acceptance of the whole party; some of the speeches of the Lancashire Conservative members, for instance, were irrefutable evidence that the Government has lost caste in north-western England. The present Administration has obviously many furrows to plough if it is to return in force at the next General Election. Speaking of the Election, by the way, I may recall that a very widespread impression exists that there will be a stale-mate next Summer; I do not share it, but it is certainly prevalent among many shrewd observers.

Lord Birkenhead's Progress.

Lord Birkenhead's desertion of the political world in favour of the financial is fluttering the doves considerably. It is significant that he has immediately attached himself to businesses with which Lord Melchett and Mr. Solly Joel and Mr. Abram Lyle are closely concerned. If Lord Birkenhead was in search of money—and no public man, perhaps, has ever before so blatantly confessed that he was—he certainly must be given the credit of knowing where to find it.

This growing passion of the business-man to secure the services of politicians—an inversion of what the ordinary man in the street had conceived to be the way of efficiency—is arousing both misgiving and hilarity. One likes the *Manchester Guardian's* suggestion of the inquiry which in future will be made to all applicants for a big position in the City—"What was your last Cabinet job?"

But Lord Birkenhead is not wholly lost to us. He has it seems, promised now and then to write for the newspapers, so that we shall still have the benefits of the working of his astute mind. And if these Press contributions happen to bring in some not entirely despised gains, what of that? Shall we not be grateful?

The Lord Mayor's Show.

It was on the jolliest of November days last week that the Lord Mayor's Show came to delight the hearts of young and old. There was a seasonable nip in the atmosphere; and the air was keen and dry, so that the smell of the roast-chestnuts which were, perhaps, unusually abundant on the comforting portable fires of the vendors, seemed very good. That smell with the crowds and the sights combined to engender a real feeling of holiday.

The Show itself was a strange mixture—I suppose it always is—of beautiful and tawdry. Advertisement of wares moved next to illustration of worthy work. The horses were possibly what the majority of people admired most. But the whole thing is such a hotch-potch that it is unique.

With the grumblers, however, who complain of loss of time, the holding-up of the traffic, postponed lunches, and the rest of it, London in general has no sympathy. The Lord Mayor's Show is an institution, and it would take a Turkish President to abolish it.

ALTER EGO.

CHOICEST JAFFA ORANGES

"SPINNEY'S SPECIALS"

Cases of 144 finest oranges delivered to any address in the United Kingdom for £1 2s. each, from early December to end of March.

Guaranteed to be the finest the Jaffa groves produce, in perfect condition, wrapped and packed under our own supervision and shipped by us.

PERSONAL AND GENERAL

TO-DAY

November 15, 1928 (New Style).

November 2, 1928 (Old Style).

Jumada II, 1, 1347 A.H., of the Muslim Calendar.

Kislev 2, 5689, of the Jewish Calendar.

Lady (Charles) Low sailed from Tilbury in the P. and O. s.s. *Kaisar-i-Hind* on November 9 for Bombay.

The Queen of Yugoslavia entertained ex-King George of the Hellenes at luncheon at Claridge's Hotel on November 10.

Sir Valentine Chirol leaves London this week by the P. and O. s.s. *Narkunda* for India, where he will be spending the winter.

Commandant Comte Roman Michalowski, Military Attaché at the Polish Legation, left London on November 13 to take up his new duties at the Polish Legation at Bucharest.

A dance will be held, under the auspices of the London Cyprus Brotherhood, at the Royal Hotel, Woburn Place, Russell Square, on Saturday, November 24, from 8 p.m. until 12 p.m.

Mr. Sydney Waterlow was received in audience by the King at Buckingham Palace on November 5, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Addis Ababa.

The Bishop of Colombo, Lady Stalbridge, Sir William and Lady Haldane, Sir Robert and Lady Johnstone, Sir Alfred and Lady Ashbolt, Sir Thomas Clement, and Mr. Justice Riche sailed from Tilbury on November 10 in the Orient liner *Orama* for the Mediterranean ports and the East.

Colonel Josiah Wedgwood, M.P., returned last week from Roumania, where he made a short stay. On November 3 a luncheon was given in his honour by M. Duca, Minister of the Interior, and in the afternoon he was received by the Prime Minister, M. Vintila Bratianu, who the same evening handed in the resignation of the Cabinet to the Council of Regency.

The King has granted permission to the following to wear the foreign decorations that have been awarded to them in recognition of valuable services to the countries concerned:—

Order of the Nile (Egypt), Third Class: Major Basil Hugh Campbell Lea-Wilson, R.A.M.C. Fourth Class: Captain Victor Charles Brind, D.S.O., M.C.

Order of Ismail, Fourth Class: Colonel Bertram Henry Samuel Romilly, D.S.O.

Sa'idi Order (Muscat), First Class: Mr. Bertram Sidney Thomas.

THE CHURCH OF ST. GEORGE AT TROODOS, CYPRUS.

WANTED!

A permanent church on Troodos for the needs not only of residents (military and civilian) but of the visitors who are coming in growing numbers each year to this popular hill station of the Near East.

It is proposed that a stone building be erected on a site, to be allocated by the War Office, near the Parade Ground, at a cost now estimated at £800.

The Special Committee includes H. L. Jones, Esq., Major L. F. Layton, O/C Troops, Norman Petrides, Esq., Dr. A. H. Unwin, Henry Williamson, Esq., and the Chaplains of Nicosia (Rev. H. Suxton) and of Limassol (Rev. L. Lindsay).

The Managing Director of the Cyprus Asbestos Co. has kindly promised a generous cash contribution and also building materials produced by the Company at exceedingly low price.

Contributions should be sent direct to the TROODOS CHURCH FUND, c/o H. L. Jones, Esq., Ottoman Bank, Nicosia.

Captain and Mrs. Duncan McCallum have moved from No. 9, St. Leonard's Terrace to No. 7, Cheyne Walk, S.W.3, which is now their permanent address.

On November 18, at 3.45 p.m., at 111, Campden Hill Road, W.8, Sirdar Ikbal Ali Shah will lecture to the British Muslim Society on "The Truth about Muslim Modernisation." Lord Headley will preside.

Dr. W. T. H. Williamson, senior assistant in the Department of Agricultural Chemistry in the Edinburgh and East of Scotland College of Agriculture, has been appointed to the position of chief chemist in the Egyptian Ministry of Agriculture at Cairo.

The annual reunion dinner of the British Serbian Branch of the British Legion will be held on December 1 at the Victoria Mansions Restaurant, Victoria Street, Westminster. The President, Dr. Alice M. Hutchison, will be in the Chair. All who served in Serbia are invited, together with their friends. Tickets may be obtained from Mr. J. R. Chappell, 123, Queen's Road, W.2.

After hearing Ismet Pasha, the Turkish Prime Minister, speak in explanation of the Government's plans for the coming Session, the Turkish Grand National Assembly in Angora on November 8 gave him a unanimous vote of confidence, and passed the Bill exempting founts of the new Latin type to be adopted for printing Turkish from Customs duties.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Roumanian Loan Position.

The interaction of political developments in Roumania on the loan negotiations is naturally the point on which interest abroad will immediately be focussed. After long and exceedingly difficult negotiations the Bratianu Administration had at length brought matters to a point when the conclusion of a loan was practically a *fait accompli*. To achieve this it was necessary for the Government to make various concessions. The strongest objections had been raised to the resumption of the payment of dividends on Roumanian pre-War stocks to German holders but when it ultimately became obvious that in the view of the foreign financial houses a settlement of this question was a *sine qua non* before a new loan could be negotiated the Government yielded, and, as a matter of fact, the convention embodying this point was signed in Berlin on November 10 after M. Bratianu's resignation. This convention provides for the payment by Germany to Roumania of 75,500,000 marks over a period of four years by annual instalments, while on Roumania's part any claim to German property in Roumania not yet liquidated is waived while the service of the pre-War stocks is to be resumed in accordance with a fixed schedule. Whether M. Bratianu also intended to meet the hostility of the mining companies by a timely revision of the unpopular Mining Law will not now be known. As I pointed out last week, a statement appeared to the effect that the Law was to be modified, but it may, as I suggested, have been merely a *ballon d'essai* to smooth the course of the final negotiations; at any rate there is no evidence that any steps had been or were about to be, taken to that end. Whatever the position is in this respect, however, the fact remains that at the time of the fall of the Administration a loan was on the verge of being concluded. Probably, if matters had been allowed to take their course, we should have found that the leaders would have made the revision of the Mining Law a condition of assistance. But speculation on this point is now fruitless.

M. Maniu and the League.

The future course of Roumania's loan negotiations must now be somewhat uncertain, for the very good reason that it is bound to be much easier for a Maniu Administration to raise a foreign loan than it was for the late Government. If the loan which M. Bratianu was negotiating had gone through it would have been found that the terms of the issue were more unfavourable than those of recent Near Eastern loans which have made their appearance under the ægis of the League of Nations. This particular question is dealt with elsewhere in these columns this week, and I shall, therefore, make no further reference to it except to point out that of the two factors which presumably principally affected the terms—Roumania's internal and external position—the first, which is by far the most important, has been removed to all

intents and purposes by the change of Government. Whether M. Maniu will be agreeable to adopt the policy which is undoubtedly favoured by his party of following the course of Greece and Bulgaria and using the good offices of the League of Nations to obtain financial assistance must remain to be seen. There are points for and against each course, which, one would imagine, will be weighed very carefully before a definite decision is reached. It has to be borne in mind as regards the present negotiations that Roumania's position under the new régime is very different from the point of view of foreign financial houses from what it was before. One can adopt a parallel from this country to illustrate the case. Suppose that a British Government was negotiating a treaty and that the Opposition declared that it would abrogate it on entering office. Obviously that would make the course of the negotiations extremely difficult. I admit that it is not a fair parallel, but it is near enough to illustrate my point. The houses with which M. Bratianu was negotiating may take the view that the altered circumstances permit a modification of the loan terms, and so by the continuance of the negotiations M. Maniu might be able to obtain financial assistance on what he would regard as equitable conditions. A point in favour of this course which is bound to have its influence is the certainty that recourse to the League, while it will mean better terms than are now proposed, will certainly entail considerable delay. No loan so far negotiated through this medium has been a speedy transaction, and Roumania's need for a loan is urgent. This urgency may be the culminating factor.

The Mining Law.

The advent of the Maniu Administration has given rise to a much greater feeling of confidence in Roumania abroad, for the very good reason that the policy of the National-Peasant Party as outlined and approved at the "Parliament" of the Party held at Bucharest last July shows a very different attitude towards outstanding questions from that adopted by the late Government. Particularly is this the case with regard to foreign assistance which the Party, it was made clear, are prepared to welcome as necessary for the country's development. Nothing in recent years has done more to destroy Roumania's credit abroad than the ill judged Mining Law. The whole question of economic regulations was dealt with in a report presented to and passed by this "Parlia-

TYRE 'ECONOMICS'

THE wise motorist judges tyre costs by *cost-per-mile*. On this logical basis the "Fort" Dunlop Cover—with an even greater reserve of strength than the famous Dunlop Cover of standard construction—is a true economic investment.

The "Fort" Dunlop is a Cover particularly suitable for those motorists who use their cars on bad roads and under onerous conditions of service.

DUNLOP

DUNLOP RUBBER COMPANY LIMITED,
St. James's House, St. James's Street, London, S.W.1.

Branches throughout the World.

ment," and it may be of interest at this juncture to outline some of the proposals which were put forward. In the first place there was the frankest possible recognition of the need for foreign capital "which we are not able to find in our country and must attract from abroad." To achieve this it is recognised that there must be equal treatment of foreign and native capital, and that it is necessary, *inter alia*, to suppress the special tax on the capital or revenues of foreign companies and to abolish the regulation fixing the proportion of foreign capital in companies constituted in the country. As regards the Mining Law the report states plainly that its "echo abroad has been so unfavourable for our country, and has caused such grave prejudice to our national economy" and that a number of modifications are necessary. Of those put forward special interest attaches to the proposal that in order to reconstitute the reserve of oil lands measures should be taken to intensify the work of exploration "by guaranteeing concessions to explorers and ultimately according them certain advantages." A further proposal is for the simplification "of the onerous formalities and the long delay for the recognition and the validation of rights acquired and the speedy elaboration of a mining survey to offer to the foreigner the security of the rights of property."

The Turkish Budget.

Details are now available of the Turkish Budget for 1929. The expenditure is estimated at £T220,297,208 and the receipts are put at £T220,291,300 thus leaving a small deficit. The expenditure shows an increase of £T13,000,000 on the previous Budget, this being accounted for principally by the allocations for national defence and for public works. The principal items in the Budget are £T55,817,510 for the Army, £T38,015,714 for the Public Debt, and £T36,617,638 for Public Works. The allocations in respect of national defence include, in addition to the Army Budget £T6,475,082 for the Navy, £T5,101,336 for military manufactures, and £T1,702,880 for the Air Service. One cannot help feeling that in Turkey's present situation the amount in the Budget allotted under these various heads to defence is rather out of proportion as the horizon in her part of the world is unclouded. Certainly it is hardly open to argument that it would be more in the real interests of the country if larger allocations were made instead for works of development, of the need of which recent events in Anatolia have made Turkey painfully aware.

Bengal-Nagpur Railway.

Very satisfactory results were obtained by the Bengal-Nagpur Railway for the year ended March 31 last. The gross earnings at Rs.9,16,23,492 were the highest on record, and while the working expenses were Rs.5,61,49,504, the net earnings were Rs.3,54,73,908 as compared with Rs.3,50,63,545. The development of the goods traffic was mainly responsible for the improvement in the results though the receipts from passenger traffic also rose. The goods earnings totalled Rs.6,30,41,176 as against Rs.5,54,37,793, while the passenger earnings were Rs.2,25,98,604 as against Rs.2,17,09,024. There was an increase in the tonnage of goods carried of 1,986,447 or

about 15 per cent., while the number of passengers carried increased by 1,292,953, or about 5.4 per cent. In addition to the guaranteed interest of £1 15s., the directors propose a further dividend of 15s. per cent. which with the similar payment for the half year makes a dividend of 5 per cent. During the year a number of new lines were opened, the effect of which on the earning capacity of the company will no doubt be dealt with at the coming meeting.

COMMENTATOR.

TELEPHONES IN GREECE.

While the use of the telephone has been slowly extending in Greece during the past few years, recently published statistics show that so far the use of this means of communication is still in its infancy in this country. Up to 1924 the telephone was only installed in six towns in Greece, and since then it has been introduced at Calamata, Herakleion, Rethymno, Volo, and Zante, but there are still about 20 towns with a population of 10,000 or over which lack a telephone. These include such important centres as Kavalla, Comotini, and Larissa. At the end of 1926 the total number of subscribers in Greece was 5,417, of which 659 represented public departments, and if from the balance allowance is made for the banks, legations, companies, newspapers, etc., it will be obvious that the number of individual subscribers must be very small. Evidently the modern Greek has still to be instructed as to the utility of being able to hear "Number, please?" at will. Within another year telephonic communications in Greece will be much improved, as under the contract obtained in May, 1926, by the New Antwerp Telephone and Electrical Works Company for the installation of a new telephone system in the country, the company undertook to establish a service in the chief towns by the end of 1929. Subsequently it is to undertake the construction of a network of long-distance communications so that all towns with a population of 10,000 shall be connected.

The India General Navigation and Railway Company has declared an interim dividend of 2½ per cent. on the ordinary shares and 2½ per cent. on the preference shares, both free of tax, payable November 23.

The directors of the Bank of British West Africa have decided to pay an interim dividend of 2½ per cent., less tax, for the year ending March 31, 1929, payable December 1, 1928.

Acting under medical advice, Sir James P. Reynolds, Bart., senior partner in Reynolds and Gibson, the well-known firm of Liverpool cotton brokers, has retired from business as from November 12. Mr. E. B. Orme, a past president of the Liverpool Cotton Association, director of Martins Bank, Ltd., and a member of the Mersey Docks and Harbour Board, has joined the firm.

The Empire Marketing Board reports that the first direct shipment of oranges from Jaffa was made on November 3 by the Granada. This vessel is carrying 25,719 boxes for Glasgow, and 2,403 boxes for Bristol, and should arrive at the first-named port round about November 20, according to the time usually taken by the Jaffa Union boats. The total quantity exported this season by direct and transshipments amounted, up to November 5, to approximately 72,000 boxes. It is estimated that there remain to be shipped some 1,050,000 boxes. Shipments during the first three weeks of the present month are expected to be heavy.

GREECE'S ADVERSE TRADE BALANCE.

The excess of the value of Greece's imports over her exports this year was substantially increased in July. The figures for that month (in thousands of drachmæ) were 973,902 for imports and 262,213 for exports, those totals being respectively the highest and the lowest for the month for the past four years. Converted into sterling at the mean rate of exchange for July, these totals represent £2,597,000 for imports and £699,000 for exports, the adverse balance being £1,898,000.

For the first seven months of the year the value of the imports (the figures representing thousands of drachmæ) was 7,310,442, that of the exports being 2,821,995, or an excess of imports over exports of 4,488,447. In sterling these totals represent roughly £19,495,000 for imports and £7,525,000 for exports, the adverse balance being £11,970,000.

Features of the import trade during the year have been the increases in metals, minerals, and oil, while there has been a marked decrease in the imports of food products. The position of the tobacco trade has affected the exports, the reduction in the case of tobacco representing 25.8 per cent. Other notable decreases have been in respect of wine, olives, and olive oil.

CYPRUS IMPORTS INCREASING.

The report on the trade of Cyprus for September, states that the value of imports during the month was £167,264, being £34,937 above the quinquennial average and £21,351 more than for September, 1927. The rise was due mainly to increases in timber, flour, tobacco and motor cars.

The value of exports was £105,341, £27,499 below the quinquennial average and £51,179 below the figures for September, 1927. The principal falling off is in silk cocoons, but as local buying for the Silk Filature is probably responsible the Colony will ultimately be the gainer. Contributory causes to the decrease were the continued holding up of barley and a poor carob crop. On the other hand there were satisfactory increases in the export of minerals, almonds, raisins and grapes, hides and skins. The first consignment of 18,000 oranges in the green state was shipped to Egypt on September 22. Twenty-six steamers arrived at Larnaca, 31 at Limassol, and 20 at Famagusta, as against the monthly average in 1927 of 27, 28, and 21, respectively.

Mr. W. Ross Munro, London manager, has been appointed general manager of the National Bank of India in place of the late Mr. W. J. K. Hegarty, and Mr. E. H. Lawrence, inspector of branches, has been appointed London manager.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Scientific Instruments, Etc.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply and delivery of scientific and measuring instruments, wall clocks, etc. December 3. (D.O.T.)

Steam Lorry.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of three steam lorries required for the Department. December 15.

Steel Book Cases.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of 115 steel book cases for the Royal Library in Cairo. December 31. (D.O.T.)

Saddlery, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of various articles such as saddlery, fire-engines accessories, rest-house necessities, leather. November 24.

INDIA.

Electric Meters.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of A.C. and D.C. meters. November 19. (D.O.T.)

TURKEY.

Field Telephone Wire.—The Direction-General of Posts, Telegraphs, and Telephones, Angora, invites tenders for the supply and delivery of 50,000 metres of rubber-covered field telephone wire. December 18. (D.O.T.)

Generator.—The Direction Générale des Chemins de Fer et ports d'Etat invites tenders for the supply and delivery at Haidar Pacha of a steam engine driven A.C. generator of 600 K.W. November 28. (D.O.T.)

PALESTINE.

Coal.—The Crown Agents for the Colonies invite tenders for 18,000 tons of large Welsh steam coal for the Palestine Railway. November 21.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, November 22); s.s. Malancha for Calcutta (Birkenhead, November 29).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 28).

British India Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, November 17); s.s. Hatimura for Bombay and Karachi (London, December 1); s.s. Morvada for Colombo, Madras, and Calcutta (London, December 15).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz and Ancona, if inducement. This steamer also closes in Glasgow on November 22 for Casablanca, Gibraltar, Corfu, Bari, Venice, Trieste, and Fiume, also Gruz and Ancona, if inducement (Liverpool November 24, and Swansea 27); s.s. Bantria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow, Swansea, and Liverpool, December 8).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, November 23); s.s. Nellore for Calcutta (London, November 24).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 17); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Cyprus (Manchester, November 24).

Ellerman and Papayanni Lines.—S.s. Mardinian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 17, Swansea November 17); s.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 27); s.s. Castilian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 1); s.s. Algerian for Algiers*, Smyrna, and Constantinople (Liverpool December 1, Swansea December 1); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 1). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 13.

The volume of business passing on the Stock Exchange is somewhat less than at the height of the recent speculative boom, but on the whole prices present a fairly cheerful appearance. There are no signs of an immediate revival of speculation in shilling shares and it is to be hoped that investors have acquired a better sense of values. In the main, British Government securities are particularly strong. This is the more noteworthy since Money Market rates are firm and gold exports continue from the Bank of England. There are still no fears, however, of an immediate rise in Bank rate; the Bank's gold position, already strong, has been fortified by the imports of Spanish gold which have been sent to support the peseta. Home rails have improved slightly. The decisive victory of the Republicans in the American Presidential Election was hailed as a bull point in the markets, several Anglo-American favourites advancing sharply. A number of miscellaneous industrials have shown to advantage, among them being tobacco shares and cable and wireless securities. The new capital market has been only moderately active during the week.

The Dangers of Mining Investments.

A mining enterprise has exercised a strange fascination over mankind from the earliest times. The precious metals especially have been universal symbols of riches, the most universally desired of all existing things. And what is true of the world in general is not less true of the investor in particular. Of all the companies and undertakings in the world he is frequently tempted to regard mining enterprises as offering the hope of the greatest return. It is true that from time to time a mining investment gives a glittering prize. But for every successful mining investment there are many that are not successful and a number that are simply disastrous. In the mining world the unexpected happens with disconcerting frequency. An extremely good year may be followed by one which, owing to circumstances which no human ingenuity could have foreseen, is extremely bad. The uncertainty, in fact, begins from the very day that the

investor takes up a mining share, for, apart from the Rand, it is impossible to estimate with an approach to accuracy the "lives" of metalliferous mines—that is, how long it will pay to work them. Even if all the factors within the control of an individual company leave nothing to be desired, the market for that company's product may be so adverse as to make the investment a source of anxiety. An illustration of this point is provided by the recent collapse in the price of tin. In short, mining shares are as unsuitable for the small investor as any investment can be. For them the only motto is: "Never put your money in any hope in the ground."

Hotel Shares.

During the past few years a number of the large London hotels have built up a position of steady prosperity. This has not unnaturally attracted the attention of investors, with the result that there has been a gradual widening of interest in these securities. The outlook for the London hotels for the coming year therefore concerns many investors. Speaking on this subject at the meeting of the Carlton Hotel Lord Lurgan, the deputy chairman, said that "the prospects for the coming year are quite good." Despite a certain extraneous inconvenience in the case of his own hotel, "the business done to date is in excess of that done over the same period last year." This is reassuring, and there can be no doubt that London retains a high place as an attraction for the foreign tourist in particular. Among the most attractive investments in the hotel group are the Savoy Hotel ordinary shares. During recent years a dividend of 10 per cent. has been paid and at the same time the company has built up a strong financial position. Thus the reserve and carry-forward equal nearly two-thirds of the ordinary share capital. At present the shares return £5 18s. per cent. The Carlton Hotel has also recently paid steady dividends, but the fact that the ordinary shares yield £7 2s. per cent. indicates that there is a somewhat more speculative element in them than in the Savoy Hotel shares.

Japanese Bonds.

Although recently the position in Japan has not been too hopeful the present situation contains signs of some improvement and promises rather better conditions for the future. Foreign trade figures, it is true, are still discouraging, and it appears that the adverse balance for the present year will be rather greater than that of last year. On the other hand, an investigation shows that the net profits of 1,200 industrial companies during the first half of 1928 totalled 298,864,000 yen, or 23,142,000 yen more than in the corresponding half of last year. This is evidence that a great number of industrial companies have consolidated their positions and set their operations upon a profit-earning basis. Moreover, unusually favourable weather during September improved the crop prospects very considerably. Official estimates for both rice and wheat show an increase on what was generally anticipated. The investor in Japanese securities has always to face the possibilities of earthquakes, which inevitably damage the financial and industrial fabric of the country and cause some dislocation in the working of its economic machinery. There is thus a speculative element in Japanese bonds. For those prepared to accept this, however, Japanese 6 per cents. finally redeemable in 1959, and yielding £6 2s. per cent., or the 4 per cents. finally redeemable in 1970, and yielding £5 18s. per cent., constitute foreign investments which are not without attractions.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended October 20 amounted to £E12,248, making the total from April 1 £E157,243.

The general rate for the conversion of Greek Customs, etc., duties from gold to paper drachmæ has been increased from 14 to 15 as from November 1.

Near East Markets

ONION GROWING IN CYPRUS.

For a number of years the production of onions in Cyprus has been an industry of considerable value to the Island, and from 1904 onwards a substantial export trade has developed. Some particulars of the trade are given in a Supplement to the *Cyprus Gazette*, and the statistics given reveal the interesting fact that the United Kingdom has come to be the chief direct importer of Cyprus onions. Thus for 1927 the United Kingdom took 27,648 cwt. out of a total export of 36,777 cwt., Egypt and Palestine being responsible for most of the balance with 4,261 cwt. and 4,153 cwt. respectively.

Between 1901 and 1903 the exports varied in quantity from 14,696 cwt. and 18,560 cwt. and in value from £1,245 to £1,843. Then in 1904 there was a sharp rise in the exports, the total being 28,928 cwt., of the value of £2,991. Since that year the trade has had its ups and down, particularly during and after the War. In 1910 the exports reached their highest figure as regards quantity with 51,799 cwt., while 1926 was the record year as regards value, the exports for that year being 43,630 cwt., of the value of £8,044. Last year the value of the exports was £7,219.

Investigations are now proceeding as to the possibility of onion seed production on a commercial scale in the Island, and the Department of Agriculture has imported from Teneriffe small quantities of seed of the Crystal Wax, Red and White Bermuda varieties for a trial. If the quality of the seed comes up to the standard of that produced in Teneriffe, it is stated that there is little doubt that in the course of time Cyprus will enter the onion seed market.

CYPRUS CROPS.

The Cyprus Trade Commissioner has issued the following crop report for October:—

The wheat market is active and the price is up to 8s. per bushel. Owing to the bad harvests the stock of good quality wheat is rapidly diminishing. There is a steady demand for seed wheat. Barley prices continue to be firm at 3s. 4d. per bushel. Offers are poor, but the demand is regular. Prices of oats are settled at 3s. per bushel. Offers are poor, but the demand is on the increase. The old stock of potatoes is nearly exhausted. The new crop is expected towards the middle of November, and prospects are promising. The high prices of last month for carobs, 22s. to 23s. per kantar, are still maintained.

The picking of cotton is nearly completed. The crop is fair, and prices are 3s. 4d. to 3s. 8d. per stone. Tobacco is 4d. to 6d. per lb. Oranges are a poor crop, but the quality is high. No prices are yet quoted. The export of lemons to Roumania, Egypt, Greece, as well as to the United Kingdom has begun. Prices fluctuate between 12s. and 15s. per 1,000. The demand may exceed supply. Onions are £6 per ton, rising. There is a good demand, and offers are satisfactory. As regards pomegranates, the Egyptian market has again been active. Prices are £4 10s. to £5 per ton, rising. Offers are good, and the demand is steady. The sesame crop is fair. The price is firm at 4s. per stone. There is a good demand, and offers are satisfactory. Stocks of cumin seed are becoming depleted. The price is £45 per ton. Grapes are an excellent vintage. The harvest is now over. Raisins are 1s. 4d. per stone.

During the year ended March 20 last 1,112 motor cars and 976 lorries and omnibuses were imported into Persia. The figures for 1926-27 were 1,330 and 967, for 1925-26 1,111 and 492, and for 1924-25 529 and 103 respectively.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended November 3:—

Sultanas.

The estimated sales to date total 31,050 tons, against 33,200 tons for the corresponding period of the previous year.

Closing prices Smyrna, per cwt. c.i.f. London, for types 12 to 18 are:—28s.; 29s. 6d.; 32s.; 34s. 6d.; 38s.; 43s.; 52s.

Market Conditions.—The market continues ruling very quiet. Views held on future prospects are somewhat divided. Native dealers argue that two-thirds of the crop has now been disposed of, and show no anxiety to press the sale of stocks still on hand. Meanwhile demand is slow and prices show more of a tendency to sag than otherwise.

MARKET FOR SHOES IN ABYSSINIA.

The Ethiopians are beginning to look upon shoes as necessities rather than luxuries. With a gradually increasing purchasing power there is a growing demand for shoes (says the United States Minister Resident and Consul-General at Addis Ababa, Mr. Addison E. Southard, in a recent report). The Ethiopian market is yet in its infancy for manufactured goods, with prospects for an early and very considerable expansion.

The population is estimated at 10,000,000, of whom more than nine-tenths live on the soil, mainly as herdsmen or peasant farmers, who are not yet buyers of shoes. Probably a half-million of the population, comprising mainly the city and town dwellers, may be considered as actual or fairly early prospects for shoes.

The importations of shoes for the current calendar year will, it is estimated, amount to 40,000 pairs, mainly from France, with some British shoes, and minor quantities from Germany, Italy, Greece, and Egypt. In addition, the home industry, located mainly in small shops of hand workers, produces about 10,000 pairs per annum, made to order.

The local classification is boots and shoes after the British method. About two-thirds of the Ethiopian demand is for shoes, and one-third for boots. Perhaps half the shoes sold are in patent leather or black dull leather with patent leather tip or trimming. The Ethiopian young man particularly fancies this style for dress wear. The ordinary black "box calf" boots are favoured, as also are boots of such leather in the three usual tan shades of leather. Canvas and cloth shoes of any sort are rarely worn. Lace boots and shoes are preferred to those with buttons. Rubber heels are known but not widely used, as the frequently rough and muddy streets and roads make the all-leather heel preferable. The French lasts are most in favour for both men's and women's shoes—that is, the long pointed toe cap style.

Roumania's maize crop is estimated at 25,369,000 double centals, which is equal to 71.8 per cent. of last year's crop and 60.2 per cent. of the average crop for the past five years.

Yugoslavia's maize crop is estimated at 20,629,000 double centals, which represents 97.8 per cent. of last year's crop and 66.8 per cent. of the average for the past five years.

Motors and Motoring.

By G. B. B.

Hooting.

The protest against unnecessary "hooting" by motorists, which was first made in this journal and immediately afterwards taken up by several daily papers, seems to have been fairly successful. There are still a few young and inexperienced drivers who cannot refrain from sounding the horn at every opportunity, but the majority of those who used to press the alarm button as a matter of course are now refraining from doing so, to the added comfort of every road user. It seems that the authorities are going to take the matter up. At first sight that seems not only unnecessary but also to be viewed with regret. It seems, again at first sight, that the good spirit of the motoring public has been aroused, and that they might be trusted to look after the matter for themselves. But a moment's reflection will bring us up against the problem of the new motorists who seem to argue that the makers would not put a horn on a car if it were not to be used on every possible occasion. No, I think we must be prepared to have this subject of noise make a punishable matter, and that in the future we shall be as liable to be fined if we have a noisy hooter as we should be had we a noisy exhaust.

Draughty Cars.

A useful hint has been given by a contemporary which says that drivers who have recently become aware of uncomfortable and unaccustomed draughts in their cars should investigate the fit of the floor boards. Frequently it is found that, owing to warping, orifices have appeared and although the effects are not noticed in the summer, the setting-in of colder weather makes their presence apparent in the shape of undesirable air currents which attack the anatomy in most unexpected places. It pays, at this time of the year, to cover the whole flooring with linoleum surmounted with matting. This not only excludes upward draughts, but protects the feet against the effects of cold air playing under the car. Incidentally, an old woolly hearthrug is just the thing to put on the floor of the driver's compartment.

The S.O.S. Saloon Roof.

The patentee of the "S.O.S." sliding saloon roof—the initials stand for "Sun or Shade"—should find a ready sale for his production. He claims that nothing so completely perfect in "sunshine" saloons has yet been offered to the motoring public. It combines the advantages of both the open and the enclosed car. He adds that the opinion of the trade is unanimous that this double opening roof and the method of its manipulation are the best yet devised. It consists of sliding roof panels and, open or shut, does not alter the line of the body. Nothing is visible that is different from a car with a fixed roof. The waterproof fabric and the inside roof lining disappear from sight as the roof is drawn open and the inside of the roof, when it is closed, has exactly the same appearance as that of a permanently fixed roof on the most luxurious car. As far as I can see, the S.O.S. roof is all that it is claimed to be and merits the attention of all motorists.

New American Models.

The Scottish Motor Show has afforded an opportunity for examining some of the new American models, and our manufacturers consequently, will be able to incorporate some of the changes in design, if they think fit, in their next year's models! The Buick has come out in a new style with a new shape for the shell surrounding the radiator and a modified form of filling cap. The Cadillac and La Salle have adopted a good deal of chromium plating, and these cars are well worth examining closely, as the new gearboxes contain a rather ingenious piece of mechanism which does away with the necessity for double clutching when changing down. This facilitates gear changing a good deal, and consequently will appeal to the less-experienced and less competent driver. The Chevrolet has a new design of radiator, but otherwise remains unchanged, and the Studebaker, the Erskine and the Chrysler have also been greatly altered. There is some discussion as to whether the new lines are, after all, an improvement. I take it that this is really a matter of opinion, some holding that the new design is far more artistic whilst others do not view the change with approval. A new-comer to Europe is the De Soto, which rather resembles a Chrysler in appearance. It will be interesting to see what results will be obtained with this car on our roads. The general opinion seems to be

that it is a strong, sturdy proposition that should give a very good account of itself.

Motors in Great Britain.

It is interesting to note that receipts for motor vehicle licences issued in this country for the nine months ended August 31 last, amounted to £23,313,000. This was a gross total, subject to rebates, refunds, cost of collection and administration and the portion due to the Exchequer under the Finance Act of 1926. During that period, the total number of motor vehicles running on the roads, excluding those operating under trade licences, was 1,996,000. That total includes 691,000 motor cycles, 294,000 motor goods vehicles, and 93,000 motor hackney vehicles, so that altogether we had about 877,000 privately owned motor cars in use. During the three months ended August 31 last, 76,478 motor vehicles of all kinds were registered for the first time, of which about 40,000 were private cars.

FURS IN GOOD DEMAND.

The report of the London Fur Trade Association (Inc.) on the October raw fur skin sales states that they attracted a large attendance of buyers from all countries. The offerings were for the most part of moderate dimensions and, on the whole, a firm market prevailed. Competition was strong for the finer furs, which maintained or even exceeded their previous values. The North American staple articles were generally unaltered, but most Russian furs were cheaper in the absence of competition from the United States. So far as the European market is concerned, the present level of prices is unlikely to show any material alteration in the near future, and, should the American situation improve, values may be expected to harden.

BULGARIAN MARKET FOR AGRICULTURAL MACHINERY.

According to an American Consular Report a small market exists in Bulgaria for agricultural implements. Although most of the population is engaged in agricultural pursuits, the farmers in general are conservative, do not take readily to the use of new methods of agriculture, and not much progress has been made in the introduction of modern farm equipment. The Government, however, encourages the adoption of scientific methods of farming and there is a trend toward the use of modern implements and machinery. The farms are small, ordinarily not exceeding 10 acres in extent, but there is a fairly large number of farms over 200 acres in size, and the topography and climate are both, on the whole, suitable for extensive agriculture.

Of pre-War sales of threshers it is estimated that 90 per cent. was of American types, but since the War the market has turned to European makes, principally owing to better credit terms. Threshers are generally purchased co-operatively and are seldom, if ever, rented out. Sometimes the owner will thresh for other farmers, taking a percentage of the grain, from 10 to 12 per cent., for his services. Instances are known of dealers using machines from stock in this manner.

Bulgarian import statistics do not show the number and types of implements imported. The agricultural machinery imported in 1927 was valued at 748,780,704 leva (£1,308,195). Germany was the chief source of supply, furnishing a value of 322,129,269 leva, followed by Austria (98,543,283 leva), and Czechoslovakia (71,877,306 leva).

NEWS FROM ALL SOURCES.

The commercial treaty concluded between Bulgaria and Turkey last February came into force on October 1.

It is announced that the Greek Government has decided to proceed with the extension and improvement of the port of Salonika.

The Indian and General Investment Trust has declared interim dividends on the preferred stock at the rate of 5 per cent. per annum and on the deferred stock at the rate of 14 per cent. per annum, payable December 11.

A regulation has been passed by the Iraq Council of Ministers prohibiting the importation into Iraq of knives known locally as "Um al Yay" and all clasp-knives more than 3 inches in length. ("Um al Yay" are knives fitted with springs which prevent the blades, when opened, from closing.)

Messrs. Helbert Wagg and Co., Ltd., announce the numbers of 445 bonds amounting to £51,470 of the Roumanian Four per Cent. External Loan of 1922, which have been drawn for repayment at par on December 1, 1928. Drawn bonds with coupons 13 to 40 attached should be presented at their counting-house, 41, Threadneedle Street, E.C., on and after November 19, 1928.

The Bombay, Baroda and Central India Railway Company announces the payment in January next, in addition to the half-year's guaranteed interest of £1 10s. per cent., of an interim dividend of £1 10s. per cent. in respect of the profits for the year 1928-29.

The Director of Agriculture in Cyprus has recently imported from Sierra Leone a quantity of seed of two of the best types of limes in cultivation for trial in Cyprus. Experiments will be made with this tree in the Kyrenia District and, if successful, it is thought that Kyrenia growers will confine their attention to lemons and limes rather than go in for orange cultivation as has been suggested.

We regret to announce the death, on November 8, after a very brief illness, of Mr. R. W. Matthew, C.M.G., Director of the Trades, Empire and Economic Division of the Department of Overseas Trade. Mr. Matthew, who was only forty-nine years of age, joined the staff of the Department in December, 1917, after a successful career at the Board of Trade, where he had served as private secretary to four successive Presidents, Mr. Sydney Buxton (Lord Buxton), Mr. John Burns, Mr. Runciman, and Sir Albert Stanley (Lord Ashfield).

Company Meeting.

BENGAL DOOARS RAILWAY.

A Record Year.

The thirty-eighth ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held on November 13 at the offices of the company, Gresham House, Old Broad Street, Mr. Robert Miller (the Chairman) presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report to the stockholders,

The Chairman, in moving the adoption of the report and accounts, said:—It is my privilege to record that results for the year under review have again proved to be satisfactory, a record in the history of the company having once more been established. The gross receipts from all sources reached the sum of Rs.25,12,207, as compared with Rs.23,43,707 for the year to March 31, 1927, an increase of Rs.1,68,500. The working expenses were Rs.12,98,574, against Rs.12,33,690, an increase of Rs.64,884, the balance, net earnings, being Rs.12,13,633, or an increase of Rs.1,03,616 over the previous year.

I do not propose to go into a close analysis of the various heads under which our earnings and expenditure are set out on the printed revenue account, but, as you will have seen, the principal increase in earnings was in goods traffic, which shows Rs.18,78,691, as compared with Rs.17,18,858, an increase of Rs.1,59,833. All general merchandise commodities showed increases with the one exception of jute, which, as the result of a fall in prices and the consequent holding up of stocks, showed a decrease of Rs.33,601. The principal increase was in food grains, in consequence of the growth of the population of the Dooars. This I think we may consider satisfactory, as an increase in population must in the future react favourably on our traffic.

With regard to expenditure, this increased by Rs.64,884, being Rs.12,98,574, as compared with Rs. 12,33,690, but the percentage on gross earnings was reduced by .95 per cent., being 51.69 per cent. against 52.64 per cent.

I would here like to say that as a result of the heavy increase in traffic and necessary renewals of our equipment, we have been obliged to supplement our rolling stock.

Included in our capital expenditure during the year under review is the cost of a new tank engine for the Chalsa Metelli branch. Two new engines with tenders have been shipped during the past few days. Four new third-class bogie carriages are under construction and will shortly be completed, and 50 covered goods wagons will be ordered in the near future. This is all to the good as an indication of the steady improvement in our business.

If you will turn to net revenue account No. 9, you will see that the net earnings for the year reached Rs.12,13,633 (as compared with Rs.11,10,017), of which, after deduction of Indian income tax and super tax Rs.1,16,738, there remains Rs.10,96,895, which at the rate of exchange of 1s. 6d., equals £82,267 2s. 6d. This with the addition of exchange differences, interest earned, and the balance brought into the account from the previous year, gives a total of £131,867 13s. 5d.

After payment of the dividend on the preference stock £14,400, carrying the sum of £4,000 to reserve for income tax, and writing off an amount of £125 1s. 7d. from suspense account, a balance of £113,342 11s. 10d. remains. From this an interim dividend of 4 per cent. was paid on April 25, 1928, on the ordinary stock, absorbing £16,000, and £20,000 has been carried to reserve, leaving a balance of £77,342 11s. 10d. to be dealt with.

Before proceeding with the question of the final dividend on the ordinary stock, I would like to make a few remarks upon the subject, which unfortunately is always before us, of floods and flood damage. At our last meeting I was able to tell you that, as a consequence of the protection works which had been erected, very little damage had been done during the monsoon season. I am now, I am glad to say, in the position to report that during the latter part of 1927 the damage to the railway from floods was slight and that such damage was made good and further protection works were undertaken during the dry season.

These works held most successfully during the wet season of 1928, resulting in large deposits of silt and the deviation, away from the railway, of the river. There has, I am glad to say, been no interruption of traffic.

For this relief from flood damage we are greatly indebted to the foresight, energy, and tenacity which have been displayed by our manager and engineer-in-chief, Mr. Polwhele, and his staff in handling a very difficult position, and the Board desire to convey to Mr. Polwhele and his staff (European and Indian) an expression of their appreciation.

You will probably have seen in the Press the published reports of our traffic returns. At October 13 our gross receipts showed a small increase over the corresponding period in 1927. The traffic prospects are, generally speaking, favourable, and if the River Teesta continues to flow as it has recently been doing, expenditure will be materially reduced, which will have the effect of increasing our net profits. It is, of course, impossible to forecast what may happen during the next flood season.

We have given the most careful consideration to the subject of payment of dividend and have, in all the circumstances, decided to recommend an increase of the bonus distribution on the ordinary stock by 1 per cent., by the payment of a final dividend of 4 per cent. and

a bonus of 3 per cent., making, with the interim dividend of 4 per cent. paid on April 25, 1928, a total distribution of 11 per cent. for the year, and leaving a balance of £49,342 11s. 10d. to be carried forward, against £47,196 7s. 5d., brought in from the previous year.

Sir A. K. Muir, Bart., seconded the resolution, which was carried unanimously.

COMPANY NOTES AND REPORTS.

DACIA ROMANO PETROLEUM SYNDICATE.

The report of the Dacia Romano Petroleum Syndicate, Ltd., for the year ended December 31, 1927, states that the directors have under consideration a scheme for reconstruction, details of which are not yet complete. The production of crude oil for the year was 36,698 tons. As the production from the wells has increased, the directors considered it advisable to improve the efficiency of the refinery and to increase its capacity. This work is nearly completed and it should be possible to refine 6,000 tons of oil per month. The profit and loss account shows a loss for the year of £82,431 16s. 2d., consisting chiefly of charges for interest and depreciation.

The Cawnpore Electric Supply Corporation announces an interim dividend of 3 per cent. on the ordinary shares, payable November 23.

The Bulgarian Minister of Commerce and Industry is reported to have granted to a Belgian company permission to engage in prospecting for petroleum in departments of Roussé, Chumène, Plévéne, and Tirnovo, covering an area of 100,000 hectares.

It is announced that Major T. F. Chipp, M.C., D.Sc., Assistant Director of the Royal Botanic Gardens, Kew, is to arrive in Cyprus this week to consider, in collaboration with the Director of Agriculture, the general botanical problems of the Island. Major Chipp will leave Cyprus for the Sudan on November 23.

Mr. Demosthenes Basil Muratti, of Avenue du Roule, Neuilly-sur-Seine, France, tobacco and cigarette manufacturer, who died on September 11, domiciled in England, left personal estate in England of the net value of £28,951. Among other bequests he left £100 each to the Greek Church, Bury New Road, Higher Broughton, Manchester.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 7:—

Egyptian Futures.

Sakel Contract.—Although values in this market show a further moderate decline on the week, the undertone remains steady, surprisingly so in view of the curtailed character of trade support accorded and recent easier tendency in the American markets. Consistent liquidation of near positions has again been a feature, but with Novembers running between 35 and 40 points under January spot houses have become interested, and unless tenders of White cotton are allowed through at reasonable differences the current position will probably close up during the next week or two. The stock of tenderable Sakel cotton (as distinct from Sudan) in Liverpool is dangerously small, and it is difficult under present conditions to visualise how additional supplies are going to be attracted here; in the first place we are again running 25 points below Alexandria (exclusive of shipping charges), secondly it would cost approximately 18.50d. to bring F.G.F. cotton here for tendering purposes. It is becoming more and more apparent that the whole basis of our contract requires reviewing; certain qualities, such as White Egyptian varieties, could be readily eliminated, and mixed cottons which have to date been leniently treated, should in future be placed outside the contract. In the meantime the market will continue to miss business; at present our sphere of usefulness either from a trade, importing, or speculative point of view is certainly restricted through the foregoing reasons. Throughout the week the Alexandria market has maintained a steady level; exporters at the other side report a moderate demand, arrivals are beginning to attain heavy figures, and unless a distinct revival in the offtake occurs during the next two or three weeks values will probably be affected by the weight of the movement. Trading in new crops has commenced, November, 1929, Alexandria to-day being quoted at approximately 40 points over the equivalent Liverpool position. At this difference we advise sales at the other side and purchases locally, as there will probably be many opportunities during the summer months of reversing the straddle at a reasonable profit. Sentiment at this side still inclines to the "bearish" side, but we prefer to advise a neutral attitude for the time being, as the recent action of the market rather inclines one to the view that values would react quickly to any stimulating outside influences.

Upper Contract.—The market continues to feel the pressure of the crop movement, and with straddle support on a much reduced scale, values are beginning to show weakness. The open straddle account appears to have attained unwieldy proportions, and, as mentioned in our previous reports, we strongly advise those who consider our present premium over American values reasonable to study carefully the situation before entering into commitments. Large imports will be attracted to this side during the next few weeks at a tenderable basis, and as the trade demand will be influenced to some degree by the present cheapness of American staples, we cannot anticipate spinners' takings being on a sufficiently large scale to prevent the local stock weighing heavily on the market.

Egyptian Spot.

We have experienced another quiet week in this department, the main features being the steadiness of Sakels and the comparative weakness of Uppers and Pillion. This is of course understandable as, in spite of a very moderate offtake for the higher priced cotton, the local stock of Sakel has shrunk to absurdly small dimensions and the available supply of this cotton—at from 50 off to 150 on November contracts—is a very limited one. On the other hand, a record crop of Upper Egypt cotton is beginning to make its weight felt, and at the same time American staple cotton is being offered at a basis which appears most attractive to consumers who, when the difference has become sufficiently tempting, have in recent years made considerable inroads into the available supply of Upper and Zagora qualities. There is another possibility which has to be borne in mind. With the present full premium which Liverpool maintains over Alexandria considerable quantities of Upper cotton are likely to be attracted to this market for tendering against our contract. This was done very successfully last year, and it is more than probable that history will repeat itself in 1929. Hence, the opinion is gaining ground that Uppers, which a short time ago looked very reasonable at 200 over American contracts, are at the moment overvalued.

The local spot inquiry has been rather featureless, and Sakel, particularly, has moved off very slowly. If anything, there still appears to be some slight increase in the demand for the finer qualities, but elsewhere there has been practically no change. A few lots of new crop Sakel have appeared on offer and both grade and staple have been found to be satisfactory. The usual steady inquiry for cotton at from 10½d. to 12½d. has continued. Uppers have chiefly been in request at from 25 off to 25 on, but there has been some improvement also in the demand for the better cotton: Pillion at from 12d. to 13d. has been in moderate request. We are of the opinion that Pillion cotton this season will meet with an increased amount of attention from spinners, provided always that the premium over Uppers is maintained at a reasonable difference.

White Egypt at from 17d. to 18d. have been inquired for, but

the better cotton has again been neglected. Other specialities have been ignored this week. Sudan Sakel has moved off very slowly, but the basis has remained firm. Egyptian c.i.f. business has been rather patchy. Forwardings to spinners last week were returned at 6,775 bales Egyptian and 850 Sudan. Estimated spot sales, 1,700 bales Egyptian and 450 bales Sudan. Quotations of Sakel have hardened 5 points, with Fine and Extra 45 points dearer. Uppers show a reduction on balance of 35 points, and Pillion is 35 to 45 points lower on the week. F.G.F. Sakel to-day, 17.80d. F.G.F. Upper to-day, 11.80d. F.G.F. Pillion to-day, 12.60d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 1, state:—

The market during the past week has been rather quiet. The week's summary of price movements is as follows:—Sakellaridis: November, 35.01 dollars, 0.29 dollars down; January, 35.75 dollars, 0.10 dollars down; March, 36.15 dollars, 0.22 dollars down; May, dollars, 0.09 dollars down; February, 23.05 dollars, 0.07 dollars down; April, 23.35 dollars, 0.11 dollars down; October, 24.25 dollars, 0.10 dollars down.

Sakel.—There is nothing new to report. Demand from abroad continues to be fairly satisfactory, but not by any means sufficient to absorb the daily increasing arrivals, and with holders in general disposed to sell, there is no disposition to try to raise prices. The local speculative element is not, for the moment, very active, and operations during the week have been limited to some straddle buying of January Sakel against sales of February Ashmouni. Sakel crop estimates have lately shown a tendency to run to bigger figures, and the general idea is now round about 2½ million kantars.

We do not look for any great change in prices in the near future. Looking at the position from a commercial point of view, the present difference between Sakel and Ashmouni would seem to be too wide, but, nevertheless, there does not appear to be much likelihood, for the time being, of any serious narrowing of the straddle. Local speculators still have a weakness for Sakel and, in our opinion, they could come in and support the market in case of any depreciation in values. The Sakel/Ashmouni straddle (January/February) stands at 1,270 points against 1,273 points last week and 824 points at this time last year.

All information may be obtained from the Secretary

Uppers.—Hedge selling against arrivals has continued on a big scale, but the good demand from spinners and the firm tone of the American markets have prevented any decline in prices. Some reports from Upper Egypt predict that the crop this year will prove to be a record one, and figures as high as 4 million kantars are mentioned; in our opinion this figure is rather too high. With the present narrow straddle difference between Ashmouni and American, and the good demand for the Egyptian staple, we do not foresee any decline in prices of Ashmouni; on the contrary, we look for a gradual improvement as soon as the crop movement slackens down. The Ashmouni/American straddle (December/December) stands at 324 points against 307 points last week and 801 points at this time last year.

The week's receipts amount to 519,063 kantars against exports 249,120 kantars; the stock in Alexandria stands at 2,609,722 kantars.

Spot.—Business continues brisk at Minet el Bassal and the past week has been a busy one. Sales amount to about 34,600 bales, of which we estimate 14,800 bales Sakellaridis, 17,100 bales Ashmouni and Zagora, 1,800 bales Pilon, 500 bales Nahda, and 400 bales other varieties.

Sakellaridis: Continues to meet with an improved demand, and quite a good business has been done, chiefly in the medium qualities, though the better grades have also been dealt in. The really low grades at present are neglected. Spot differences are unchanged for the medium qualities, whilst the top grades are slightly dearer. Extra qualities continue in demand and excellent prices were paid for the Domains cotton at this week's auction.

Ashmouni and Zagora: Continue in good request for all grades except really low cotton, though the medium qualities have enjoyed

the greatest demand. Spot differences are without much change, but with a tendency to ease for Fully Good Fair and below, of which there are now large quantities on offer.

Pilon: Although quite a fair business has transpired, the turnover has been much less than last week. All styles have been dealt in, but the medium qualities have attracted more attention. Spot differences are unchanged.

Up-country: Business up-country is very active and prices dearer, in many instances, than those ruling at Minet el Bassal have recently been paid; this has been especially pronounced in the case of Nahda cotton and certain good crops of Sakel. In Upper Egypt the congestion mentioned in our previous reports continues. All the ginning factories are absolutely full of cotton, and in view of the fact that nearly all are working day and night, arrivals in Alexandria will continue to be heavy for still a few weeks.

The Greek Ministry of Transit and Communications is inviting tenders for the erection in Athens of a broadcasting station.

The Madras Electric Supply Corporation announces an interim dividend of 2½ per cent., free of tax, on the ordinary shares, payable November 24.

Yugoslavia's exports in September last amounted to 447,182 tons, of the value of 692,300,000 dinars. Wheat exports represented 138,300,000 dinars, building timber 89,200,000 dinars, and hops 58,800,000 dinars.

Notes of the Week.

Serbs and Croats.

Although the negotiations undertaken by M. Savchitch to bring about an understanding between the Belgrade Government and the Peasant-Democrat Coalition have achieved as yet no concrete result, his efforts have not only prevented the breach between Serbs and Croats from becoming wider, but have also brought about a more accommodating frame of mind on the part of the Serbs. It is now acknowledged more or less generally by the latter that the Vidovdan Constitution will have to be modified, and the Government is understood to have informed M. Savchitch that it is prepared to replace the existing highly centralized system of administration by the grant of wide autonomy to the different provinces, in so far as may be compatible with the unity of the State. At the same time it would agree to new elections, but on the condition that a previous understanding were reached between the various parties as to their respective attitudes towards the Constitution. In other words, the Radical Party is anxious to insure that the existing basis of the Constitution be retained, and that any modifications shall be made strictly within the four corners of the Constitution. The next step lies with the Croats, who, so far, have proved themselves less amenable to M. Savchitch's influence than the Serbs. The Belgrade Government has, apparently, thought better of its decision to prosecute Dr. Matchek and M. Pribitchevitch for making incendiary speeches; but any success scored by the moderates in the Cabinet provides the extremists with a further incentive to intrigue for a reconstruction of the Ministry in order to have a homogeneous Cabinet of their own political complexion. Dr. Koroshetz's task in these circumstances cannot be an easy one, and his precarious position does not conduce to the exercise of constructive statesmanship. In the meantime there is always the danger that the Croats, finding that their tactics have reduced them largely to impotence, will seek a way out of the *impasse* by more aggressive measures.

Flint and Tinder.

The boycott would seem to rank high in Croatian statesmanship. It is a favourite weapon among the Chinese—the only people who are able to use it with complete success—and Indians; but it hardly conforms with the Western conception of politics. The Croats have boycotted the Skupshtina and Belgrade, and now their leader, Dr. Matchek, has boycotted matches. The occasion is the Swedish loan negotiated by the Belgrade Government. The Swedish Match Company is to have a monopoly of the manufacture and sale of matches for thirty years and will advance the Government on loan £4,500,000 at six-and-a-quarter per cent. interest. The Peasant-Democrat Party is opposed on principle to this loan, and, being unable to bring about its rejection in Parliament, proposes to stultify the monopoly by boycotting matches. All good Croats are required to give up using them, and to revert, if necessary, to the flint and tinder era. Other methods of obtaining a light may be used, as far as they will go round the Croat population; but the Belgrade Government, not being in the habit of taking things lying down, has issued an order subjecting all these devices to the match monopoly tax. The struggle will presumably end in the continued use by the Croats of matches. There must be limits to the policy of boycott; otherwise, confronted with loans for the construction of railways and the stabilization of the currency, the good Croat may consider himself obliged to testify to his disapproval of these loans by refusing to use the railways or to handle money. Dr. Matchek and M. Pribitchevitch may think that they are following in the footsteps of Dr. Maniu; but, although the latter boycotted the Roumanian Parliament, he was careful not to lose touch with Bucharest or the people of the Old Kingdom. Croat dissent loses much of its force by the withdrawal of the injured Achilles into his tent. He will emerge one day, but in the meantime he is doing little to help his country's cause.

The Dead Sea Salts.

The new session of Parliament was not many days old when the small group of politicians which has displayed so much anxiety over the allocation of the Dead Sea concession returned to the charge, and the following day a meeting under the auspices of the Near and Middle East Association, drawing its inspiration apparently from the same source, discussed the subject. In answer to a question in the House of Commons Mr. L. S. Amery stated that he had received from the Palestine Government within the last few weeks a report giving its views on all the points of detail still outstanding, and he hoped shortly to come to a final decision in regard to the application, which had been accepted in principle some time back. From this reply it may be inferred that the long delay over the formal granting of this concession is now drawing to a close. Out of four tenders submitted, a year previously, that of Mr. Novomeysky and Major Tulloch was accepted in principle last December. In view of the potential importance of the Dead Sea salts and the variety of interests involved the drafting of a concession must be supposed to have taken some time. Having been drawn up in London, it would require to be submitted to the Palestine Government, which, it may be supposed, would want to go over of its own accord much of the ground already covered in London, in addition to breaking new ground itself, before being satisfied that provision had been made for all possible contingencies. There would presumably be constant reference to and fro between Jerusalem and London, and in these circumstances, with the summer holidays intervening, the long delay will have been explained. The uneasiness that it has caused may have been due in part to the economy of explanation practised by the Government, and this in turn will have been prompted, perhaps, in some measure by the unusual suggestion, which certain Members of Parliament were found willing to put forward, that a financial syndicate, which had failed to put in a tender, should, a year or more later, be allowed to supplant the tenderers to whom the concession had already been granted in principle. It would appear, however, that this suggestion was linked up with another movement for a "pooling" of the tenders with the idea of meeting any possible difficulty in regard to the requisite financial backing for the vast project involved. Apart from the financial attraction that the concession exercises, there has existed a genuine fear lest the Dead Sea salts should be allowed to fall into the hands of the German interests which have a virtual monopoly of the world's potash. There was no reason, however, to suppose that on this particular point the British and Palestine Governments would be less zealous of British and Palestine interests than the occasion obviously requires. The concession, it is to be expected, will fully safeguard all legitimate interests.

Government and Opposition in Egypt.

On another page we publish a telegraphic report, received from Wissa Wassif Bey, who was President of the Egyptian Chamber of Deputies that was dissolved last July, of a meeting held by former Wafdist deputies in a newspaper office in Cairo on November 17. Various meetings have been convened in different centres by the Wafd, and the attempt to invest this Cairo meeting with, as it were, parliamentary status will be regarded abroad as additional proof that Mahmoud Pasha's Government is not as arbitrary as its opponents represent and that it is using the restriction of popular liberty with commendable discretion. The resolutions passed at the meeting followed the lines that were to have been expected. Parliament has been suspended for reasons carefully set out in the Rescript ordering the suspension, and it is only natural that those whose action as deputies brought about the suspension should denounce the step. The world knows quite well that it is contrary to a Constitution to suspend Parliament, and is concerned mainly with arguments for and against the action. Mere denunciation or

appeals to the provisions of the Constitution itself do not carry the matter any farther. The Wafd has not been able to explain away the attitude of Parliament that reduced the government of the country under its own leader to impotence, and its appeals now to the British sense of fair play and love of liberty ignore the fact that there can be no outside intervention in what is for Egypt purely a domestic affair. It is of interest to note that the Government regards its position in the country as strong enough to allow it to contemplate with complacency the fulminations of its opponents, even when they arrogate to themselves the status of a non-existent parliament. The need for suppressing these demonstrations, which was held to exist for the first few weeks after the installation of a new and untried régime, has passed, and it is better that the widest possible scope should be given for the safety-valve of free speech, so long as it does not operate to the manifest prejudice of law and order. Public opinion in Great Britain is necessarily interested, as from a distance, in the Wafd in opposition, if only for the reason that it will be the first to welcome any change of mind or outlook which suggests that the unpractical policy of mere negation which was all that the Wafd in power could offer as its contribution to Egypt's welfare has been definitively abandoned.

The Syrian Political Problem.

The Syrian Constituent Assembly, which was suspended last August for a period of three months, during which time M. Ponsot, the High Commissioner, was to endeavour to find in France a way out of the difficulties that had arisen as between Nationalists and the Mandatory Power, has been suspended for yet another three months—ending on February 11, 1929. At this postponement of the solution no one appears to be much surprised; the President of the Constituent Assembly, for example, himself had anticipated it. It is interesting to notice, however, that Hashim Bey al Atassi has recently indicated one possible line along which Franco-Syrian relations may proceed. In an interview with *Al Ahrar*, of Damascus, the President of the Assembly has suggested that the articles to which the French took exception might have been treated of separately, and that the Constitution might have been left. He asked what the French would have lost by granting a free and independent Constitution, so long as the executive power remained in their hands. In other words, there is a tendency, if the President's reported words are any criterion, among the Syrian Nationalists to grasp at the shadow without worrying over much about the substance of independence. Such a conclusion, however, is not very convincing.

INDIAN NOTES.

Bombay's New Governor.

After the usual round of valedictory functions, Sir Frederick Sykes leaves London this afternoon to take up his duties as Governor of Bombay, probably during the most momentous years in the history of our oldest possession. Whatever objections there may be, from the standpoint of the individual to the custom which ordains that Viceroy's and Governors-designate shall devote a not inconsiderable part of the period between their appointment and departure to attendance at such gatherings, its observance on recent occasions has certainly been attendant with the happiest results. Virtually unknown outside army and aviation circles until June last, Sir Frederick Sykes has emerged from a trying ordeal in a manner which augurs well for the success of his term of office in so widely different a field. Unlike Sir George Schuster, now entering upon his new duties in the more rarified atmosphere of Simla, the Governor-Designate of Bombay is not altogether new to India, having served in the Intelligence branch of Army Headquarters at Simla during

the past decade. At the same time he will be the last to suggest that the knowledge so gained can compare with the accumulated experience of the great public service over which he will in part preside. In fact, it will probably be no small advantage to set out at a time like the present with a record in which the bitter Indian controversies have no place at all. For the rest he is known in this country as a man of the highest character, a distinguished soldier with considerable administrative experience, and a good sportsman in the truest sense of a much-abused term. Moreover, he has peculiar qualifications for assisting India's progress in at least two directions—aviation and broadcasting—where the need for his counsels is likely to become progressively greater. Those who have come into contact with the new Governor, who, during the past few months has proved himself to be a diligent student of Indian personalities as well as politics, have testified to his quickness of perception, sympathy, and sound and sober judgment. This is an equipment of the right kind. Whether Sir Frederick has the geniality and social gifts that will enable him to fill the place in public esteem occupied by Sir Leslie Wilson, or the restless energy and outstanding ability of Lord Lloyd is improbable. From our knowledge of the new Governor's record, we imagine that he will probably be found to perpetuate the best features of the administrations of each of his immediate predecessors—and if that proves to be the case Bombay may well count itself fortunate in its new Governor.

The Commission in Sind.

The visit of the Simon Commission to Sind has brought out into clear relief the acuteness of the differences between the Hindu and the Muhammadan communities in that Province. In no other part of India, with the exception of the small and politically backward North-West Frontier Province, where the Commission is now hearing evidence, is the preponderance of the Muhammadan population so great; yet the Muhammadans have as little control of the policy of the Government under whom they live as they have in the predominantly Hindu Provinces. This is in part due to their own backwardness, but chiefly to the fact that the Hindus are greatly in the majority in the Presidency of Bombay to which Sind is attached. Small wonder that the Muhammadans seek for the autonomy of Sind, while the Hindus cling to the Bombay connexion. They profess to do so, indeed, solely on the economic ground that Sind cannot stand alone. If, however, this were the sole reason, it is difficult to see why amalgamation with the Punjab should be objected to by the Hindus. The mercantile and above all the irrigation connexions with that province would be a strong reason for such amalgamation; but all parties in Sind are afraid of being swallowed up in the strong and virile Punjab. A point which is often overlooked is that the difficulties of the administration of Sind from a distant centre in an alien Province were formerly overcome by the grant of considerable independent, and indeed autocratic, powers to the Commissioner in Sind. We observe that even so well-informed an authority as *The Times*, according to a recent leading article in that paper, still labours under the impression that these powers still exist. In practice, however, these powers have been diminished or abrogated by the encroachments of the Bombay Secretariat and by the removal from his own control of various departments which are now administered by a centralised control, whether at Simla or at Poona. Such shreds of power as still remain with the Commissioner are liable to rouse objection either from the Muhammadan or the Hindu point of view, as being exercised without consultation with a local legislative assembly. It appears probable, however, that the demand of three-fourths of the population for a change in the administrative system cannot be permanently denied. The sole objection is the financial one; that we believe could be overcome by the creation of self-government in the first place on the smallest and least expensive scale, subordinate to the

Government of Bombay. Precedents that occur for such treatment are the smaller Provinces of Canada, or even the government of Ulster. It is in any case interesting to find that the Nehru Scheme, which was alleged to have been accepted with such unanimity at Lucknow, has been so entirely repudiated by each of the parties in Sind.

The Indian Match Industry.

When referring to the Indian match manufacturing industry a few weeks ago we mentioned that the Government of India had decided to accept the recommendation of the Tariff Board in favour of protection. Matches imported into India are already subject to a Customs duty of 100 per cent.; and the Government decided to maintain this duty and to convert it into a protective impost. A Bill having these objects in view has been accordingly submitted to the Legislative Assembly and has been adopted. The Government hope that they will not be required to keep the duty for very long at so high a level as 100 per cent. And they have also said that they will review the situation again if the great Swedish Match Company should endeavour to acquire a monopoly in India. During the debate in the Assembly a curious line of argument was advanced by Mr. Joshi, who represents Indian labour interests. This member favoured the Bill, but he thought that no fees should be paid to the directors of those manufacturing companies whose manufactures are protected by import duties. He accordingly proposed that the directors of Indian match manufacturing companies should be prohibited by law from receiving fees. Another member immediately countered this quaint proposal by saying that import duties benefit not only directors and shareholders but also workmen. To be logical, therefore, the amendment would require to provide that the workers in the match industry should agree to put into a common fund the difference between their wages as agricultural labourers and their wages as match operatives. This reply seems to have sufficed, and the amendment was rejected. The mover was good enough to make it clear that he did not want to deprive shareholders of their dividends; and for this concession he was thanked!

M. Venizelos, Greek Prime Minister, on November 15 approved the Minister of Health's proposal to tax bachelors and empowered him to draft a Bill in virtue of which the proceeds of this tax will be used for child welfare.

A Bill was introduced in the Greek Chamber on November 15 providing for the appointment of an Under-Secretary of State in the Prime Minister's Department. In the interests of economy the Under-Secretaryship of Agriculture is being abolished, and M. Pappadatos is being appointed to the new office.

ROUMANIA'S DIFFICULTIES.

Dr. Maniu's Government has no light task before it, if it is to win for Roumania in the family of nations the place that her size, resources and aspirations bespeak for her. The heritage to which the new Prime Minister succeeds is not a happy one. The Liberal régime, which has held sway for practically the whole of the ten years since the Armistice, prided itself on its business capacity, and, like many businesses, it had no soul. Rigid in its policy, cynical and severe in its methods, it followed with some degree of ruthlessness its own prescribed route, and would never allow that there was any need to consult either the opinion or the susceptibilities of others. The result has been that the end of the Liberal tenure of office finds the new provinces of Greater Roumania antagonistic, foreign opinion estranged, and only that section of the people of the Old Kingdom which is peculiarly dependent on the favour of the leaders of the Liberal Party inclined to regret the change of Government. Roumania, it is to be feared, has paid a heavy price for an unsympathetic administration. To the credit of the Liberals have to be reckoned the carrying into effect of agrarian reform and the extension of the suffrage; but both achievements have been to some extent stultified by the failure of the Bratianu régimes to live up to the spirit that lay behind the two movements. The distribution of land among the peasants was followed immediately by the studied neglect of agriculture and the favouring of industry at its expense; the widening of the suffrage was accompanied by the dragooning of the electorate and, if not the actual encouragement of an arbitrary and corrupt officialdom, at least a cynical indifference to its existence. The difficulties in the way of post-War Governments are a matter of common knowledge. The first need, however, of Greater Roumania was the consolidation of its component parts; the more mixed its population the more urgent a policy of general appeasement, and, if a highly centralised régime was considered necessary, the greater the deference that ought to have been paid to local susceptibilities by a bureaucracy recruited for the most part in the Old Kingdom. The outlook of the Bratianu régimes, unfortunately, was bounded by financial ambitions. The almost complete dependence of pre-War Roumania on foreigners for her economic development was rightly regarded as a slur on Roumanian capacity, but the remedy lay in a more gradual transfer of control into Roumanian hands than was aimed at by the Liberal leaders, who found in the creation of new enterprises a source of political strength and personal gain.

Agrarian reform in Roumania has had two important effects on the economic situation of the country. There has been an inevitable diminution of production as a result of the breaking-up of the large estates and their partition among peasant holders. The latter thought only in terms of their own requirements, and in any case lacked the wherewithal, in regard both to capital and to machinery, for production on the previous scale. The co-operative movement has helped to make good the lack of machinery and implements and to facilitate the marketing of crops;

but it has done little to remove the second handicap from which Roumania suffers. The Roumanian peasant is a person of simple tastes; he has been accustomed to a hard life, and when agrarian reform came to lighten his burden, he accepted the relief without acknowledging any responsibility on his part to produce more or to develop more wants. Roumania's purchasing power, however, is conditioned mainly by her agriculture, and it follows that the sudden expansion of industrial enterprise, at a time when the purchasing power of the country is either at a standstill or receding, places a premium on failure. Before the Liberal Party embarked on a far-reaching policy of industrialisation, it ought to have taken steps to foster agriculture and to raise the standard of living among the peasants. The wants of the latter—both male and female—would have compelled them to earn more money by more cultivation and would have provided a wider market for nascent industries. The new Government is pledged to devote more attention to agriculture than its predecessors did; it will also have to take this social problem into consideration. The lack of human sympathy, which was a characteristic of the Bratianu Governments, affected both the Roumanians of the new provinces and the minorities. Dr. Maniu can, therefore, be expected to adopt a more friendly attitude towards the latter. He will realise from his knowledge of conditions in Transylvania that the good will and contentment of the minorities are hardly less important for Roumania than the solidarity of the different provincial units.

So wide will be the demands on the new Government's sympathy that its danger will lie mainly in the temptation to promise more than it can reasonably be expected to fulfil. Dr. Maniu has it in his power to inaugurate a new era in Roumanian history. As the Liberals are identified with the disintegration of the old feudal conditions that existed at the formation of the Kingdom, so the advent to power of the National-Peasant Party should entail for Roumania the beginning of a truer conception of democratic institutions. It is unlikely that the Prime Minister will lend himself to a dictatorship of the peasantry, such as Stamboulisky sought to introduce into Bulgaria. On the other hand, he will have to guard against any violent swing of the pendulum from favouritism of the Old Kingdom to favouritism of Transylvania or the new Provinces. If he does not lose sight of the fact that he is the head of a united Roumania, his association with the peasants of the Kingdom should enable him to give to the Government's policy just that trend which the agricultural character of the State requires for the adequate development of its resources. The industrial development that he inherits from his predecessors is sound in principle, and by attempting to scrap it he would be guilty of as grave a mistake as the Liberals were in their efforts to force it at the expense of agriculture. For this reason he cannot afford to promise too much. He must necessarily take over much that the Liberals have bequeathed him, and does not start with a clean slate. In their omissions he will find ample room for the foundation of his new building alongside theirs; and only when his construction is far enough advanced to meet the more pressing needs of the nation, will it be necessary to consider whether the Liberal edifice has to be entirely demolished. Until then the needs of the moment will be met by a thorough cleaning of the premises. Dr. Maniu would seem to be making a beginning on these lines. The censorship is to be abolished, free elections are to be held, bribery and corruption are to be discountenanced. M. Bratianu could not risk any of these steps. When a party that owes its origin to a national revolt against oligarchy finds itself reduced to a small unit trying to stifle the expression of the popular will, its usefulness has been outlived. If, therefore, Dr. Maniu can avoid early mistakes of policy, and can give the Roumanian people an honest administration and a "square deal," he may secure for his National-Peasant Group as long a lease of life as the Liberals had in their day, until with changing conditions new forces arise to ensure the continued progress of the race.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, November 15.

The Political Situation.

Until King Alexander returns from Paris no sudden change in the political situation in Belgrade is to be expected; but on his return in a few days' time it is fully expected that great changes will rapidly take place.

Relations between the four parties of the Belgrade Government are becoming more and more strained. M. Davidovitch has himself expressed discontent with the work of the present Government, and is spurring on his Ministers to get as much work done as possible in view, probably, of the necessity of showing some results when the elections, which cannot be much longer postponed, take place. There is fairly general dissatisfaction with the work of Dr. Koroshetz as Minister of the Interior and with that of the Minister for Agriculture, but so far it is understood that the Democrats could probably be satisfied by certain changes in the personnel of the Cabinet.

More striking are the differences which have arisen with the Muslims. While in most constituencies the Muslims worked hand in hand with the Radicals during the recent municipal elections, in Bosnia and Herzegovina their representatives, once elected, have refused in many cases to continue this co-operation and are joining forces with the Croat Peasant Party and obtaining thus in many cases complete majorities in the municipal councils. The Muslims claim that this is due to the unfair attitude of the Radical local Governors, who have completely alienated the followers of the Yugoslav Muslim Organization, and they demand the changing of the *Veliki Jupani* (Governors) of Sarajevo and Tuzla. It is understood that Dr. Spaho has threatened to withdraw his support from the Government, unless these changes are made. The Radicals, annoyed by the co-operation of the Muslim Organization with the Croat Peasant Party, refuse to agree, and Father Koroshetz is believed to have had difficulty in persuading Dr. Spaho not to withdraw immediately from the Government. This matter will have to be settled as soon as the King returns.

Other storms which have arisen for, apparently, comparatively trivial reasons serve to show how strained relations are becoming. M. Milan Grol, Minister of Education, was accused of having stated in a private meeting of the Democrat leaders that one of the Ministers of the present Cabinet was a "scoundrel." This called forth a storm of protest from the Radicals, who seemed to think that the cap fitted, and repeated demands for M. Grol's resignation. It is whispered that M. Grol referred to M. Dragisha Tsvetkovitch, Minister of Religion, who has also raised heated protests from a section of his own party for alleged interference in a most illegal manner with the working of the Nish District parliament.

A Basis for Co-operation.

It would appear that M. Savchitch has temporarily come to the end of his tether. He has been informed that

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

it is of no use for him to go to Zagreb until this Government has resigned and this Parliament has been dissolved. He is reported to be sorting out the mass of information that he has gathered in his interviews with the various party leaders, and to be preparing a report to give to the King on his return. His last interview was with Father Koroshetz, who gave an official reply on behalf of the whole of the four-Party Coalition to M. Savchitch's questions. This reply sets forth the terms on which the Belgrade Government is prepared to begin negotiations with the Zagreb parties. The main points raised were these. The Government is prepared to agree to elections' being held on condition that the issues they are intended to settle are fixed in advance. If agreement cannot be reached within the terms of the Vidovdan Constitution, they are prepared to accept its modification through the normal channels laid down in the Constitution itself, so long as the proposed changes tend, in their opinion, to strengthen the State. They are prepared to agree also to the present highly centralised system's being changed into one giving wide local autonomy and carrying the principle of decentralisation of power to the furthest limits compatible with the unity of the State. Elections should be carried through, if possible, by a Concentration Government, including representatives of the Peasant-Democrat Coalition. It is, perhaps, worthy of note that Dr. Koroshetz refuses steadfastly to give the views of his own party and speaks only in the name of the Belgrade Government. The views expressed by the Press of the Slovenian People's Party are often distinctly at variance with those of the Government, and *Narodni Politika*, Dr. Koroshetz's organ in Zagreb, published a striking article on the tenth anniversary of the Geneva Declaration (November 9) claiming that all Yugoslavia's difficulties date from the time when the Geneva Declaration, which anticipated a federally organised State, was neglected by the desire of M. Pashitch, supported by M. Pribitchevitch, and a centralised régime was instituted instead.

Within the Croat Coalition.

The *Prechanski* parties appear at first sight to be remarkably unanimous. True it is that Croat and Serb, townsman and peasant, rich and poor, they are unanimous on this point—that in no circumstances whatever can any negotiations be begun with the present Government, and that the first step towards a settlement must be the dissolution of the present Parliament. Their unanimity on this point is strengthened by their realisation that any sign of disagreement will encourage the Belgrade parties and tend further to delay a solution of the present crisis, and by the fact that none of their leaders, since the death of Stepan Raditch, is big enough and influential enough with the masses even to suggest negotiations with the present Belgrade Government, in face of the people's strong feeling against this step.

Nevertheless differences in opinion on constructive matters are to be traced between the different sections of the Peasant-Democrat Coalition. There is a more peaceful group led by M. S. Pcpovitch and M. Grisogon, and a more warlike one led by M. S. Pribitchevitch. In the ranks of the Croat Peasant Party itself there are the die-hards led by M. Predavatz, Krnyevitch and company, and the moderates M. Matchek, M. Kovatchevitch, M. Preka and others. These differences will become more obvious and more important, when once the first barricades have been broken down and negotiations between Belgrade and Zagreb have begun.

Priest and Police.

When a priest, Father Koroshetz, came to the Ministry of the Interior, it was generally expected that police administration would be improved and especially that a

tendency to brutality, which had from time to time been observed, especially in the suppression of political demonstrations, would be eradicated. But whether from design, or lack of control, or just sheer misfortune, his term of office has been marked by a whole series of incidents in which the police have dispersed demonstrations of nationalist or political organisations with great ferocity; firearms have been used and blood has been shed. Following on the anti-Italian riots which occurred when it was first proposed that the Nettuno Conventions should be ratified, the Ruski Tzar incident, and the ruthless dispersal of demonstrations in Zagreb immediately after the events of June 20—in all of which cases firearms were used and blood was shed by the police—similar scenes were witnessed in Liubliana when, after a lecture at the University on the eighth anniversary of the signing of the Rapallo Treaties, students demonstrating against Italy were dispersed by police with drawn sabres, and a youth was wounded by a revolver shot, and in Zagreb when a small group of Communists, celebrating the eleventh anniversary of the Russian Revolution, were violently dispersed. The people of Liubliana are especially incensed, since the Minister of the Interior responsible is their own leader and countless anti-Yugoslav demonstrations held in Italy are allowed to pass unnoticed.

A Timely Loan.

The day of reckoning which seemed to be drawing near in Yugoslavia, as in Roumania, owing to the financial difficulties of the Government, has been postponed by the conclusion of a 22,000,000 dollar loan for 30 years at 6½ per cent. issued at 90, granted by the Swedish Match Trust in return for the surrender to them of the monopoly of the sale and manufacture of matches in the Serb, Croat and Slovene Kingdom. Compared with earlier loans concluded by the Yugoslav Government these terms appear to be very favourable, although they are not so good as those obtained from the same Trust by the Hungarians. The Trust obtains a considerably higher rate of interest than it is paying its shareholders, and it remains to be seen how much extra they will be able to make from their more efficient methods of production and distribution of matches. It is certain that they will make enormous profits unless the Peasant-Democrat Coalition succeed in carrying out a plan formulated by M. Matchek to protest against the Belgrade Government's concluding this loan, despite the declaration of the Croats that they would not recognise it. The plan is that they should organise among their astoundingly well disciplined masses a boycott of matches and return to the use of the flint and steel not so long abandoned in Herzegovina.

Cairo, November 30.

The High Commissioner and Lady Lloyd returned to Cairo on Wednesday. They landed from the Orient Line Oronsay at Port Said, where they were officially received. After inspecting the Guard of Honour they left by special train for Cairo, where a large gathering of British Residents greeted them. Dr. Hafez Bey Affifi, Minister of Foreign Affairs, who had come up specially from Alexandria that morning, welcomed them on behalf of the Cabinet, and there were a number of Egyptians on the

platform, including General Mabruk Bey Fahmy, who presented Lady Lloyd with a bouquet of flowers.

Last night the Prime Minister came up to Cairo, and to-day the seat of Government was officially transferred from Alexandria, where it had been during the summer. King Fuad will, however, remain at Montazah until the end of the month, as the sea air is doing the Queen and the Royal children so much good. From time to time one or other of the Ministers will go to Alexandria to confer with the King, and there may be a Cabinet Council at Montazah later in the month. But the Government offices at Bulkeley are permanently closed for the winter season.

The Mixed Tribunals.

The cables are buzzing between Legations and their respective Governments as a result of the Note addressed to them by the Ministry of Foreign Affairs on the subject of the Mixed Tribunals reforms. The Note calls the attention of the Legations to the circular letter on the subject addressed to them last December by the late Sarwat Pasha when he was Prime Minister, in which draft laws introducing certain reforms were communicated and the Powers asked to assent thereto.

The reforms include the transfer to the Mixed Courts of jurisdiction in such matters as white slave traffic, trading in noxious drugs, commercial frauds, adulteration of foodstuffs; an amendment of the Mixed Courts organisation law so as to bring it more into harmony with the provisions of the Constitution in the matter of the promulgation of laws; the abolition of assessors; the deletion from the Mixed Courts regulations of the provision that the Presidents and Vice-Presidents of all the Chambers must be European so as to make it possible for an Egyptian having the necessary qualifications to be elected by his colleagues to one of these posts; the creation of a fourth Appeal Chamber of three Counsellors; and permission to the members of the Mixed Bench to receive decorations.

The circular points out that although the situation is to-day not what it was a year ago, and the same urgency therefore, does not attach to the amendment of the Mixed judicial organisation law, nevertheless this amendment is necessary since the suspension of Parliament is only temporary. It also calls attention to the obstacles to financial and legislative reform in general which the Capitulations set up, and it advises the Powers that the Egyptian Government hopes in the very near future to be in a position to submit to them its proposals in regard to the substitution of some other régime which will harmonize better with the present day situation in Egypt.

There would appear to be little objection in principle to the introduction of any of the reforms now proposed, with the exception, perhaps, of liberty to be accorded to the members of the Mixed Bench to accept decorations from the Egyptian Government and the creation of a new Appeal Chamber composed of three instead of five Counsellors. It is not at all improbable that in the end a five-counsellor chamber will be agreed to, as in view of the vacancy caused in the Procureur-Generalship by the resignation of M. Van de Bosch, this will enable the responsible authorities to meet certain international difficulties arising therefrom. It is, indeed, considered possible that no conference will be held, but that a committee of legal experts will be constituted to work out the

details of these reforms, and that it will be able to meet in the new year.

An interesting and unprecedented step has just been taken by the commercial communities of Alexandria in the matter of the economic and financial policy which the present Government has initiated. L'Union d'Alexandrie, the formation of which, by the leaders of all the important commercial communities of Egypt's second capital, I reported about a year ago, marked the resumption of its labours after the summer recess by passing a resolution approving the Cabinet's policy, and it authorised its President and founder, Emin Yehia Pasha, and its committee to wait on the Premier Mahmoud Pasha, and to present him with a copy of this resolution. This it did last Monday, when Yehia Pasha was accompanied by most of the members of the committee now in Egypt—among them Sir Henry Barker, Mr. Ralph Carver, M. Lascaris, M. Vatimbella, Baron Felix de Menasche, M. E. Bourre, Mohamed Mukbel Pasha, Ramadan Yussef Bey, Antoine Archache Bey, and M. de Semo. The Premier received them at his offices at Bulkeley and made a very friendly reply, thanking them for the sentiments to which they had given expression; he emphasised that the manner with which the Government had welcomed the creation of their Union proved the interest it took in every activity directed to the development of the resources of the country and the increase of the welfare of its inhabitants, and he added that the Union could ever rely on a ready and sympathetic reception from the authorities. The Premier ended with an expression of the hope that, thanks to the close co-operation of all elements of the country, without distinction, Egypt will attain further progress and prosperity under the guidance of its beloved sovereign. Apart from the fact that never before have the various communities taken joint action on a matter of this nature, the resolution of the Union d'Alexandrie is an interesting commentary on the propaganda which the Wafd is carrying out in Europe to discredit the Mahmoud Cabinet.

Medal of Good Will.

Another Egyptian decoration has just been created. A royal rescript institutes a series of medals called Medals of Good Will, for bestowal on Government employees, civil as well as military, as a mark of recognition of long and loyal services. There will be three categories, gold, silver and bronze. Gold medals will be bestowed only on those who have at least thirty-five years, silver ones on those having twenty-five years at least and the bronze on those having attained fifteen years in the service of the State. The medal bears in relief on one side the effigy of the King and on the other the Royal arms with above the name of the medal and beneath A.H. 1347. The medal will be worn on the left breast, hanging from a silk ribbon red between two lines of blue, after other Egyptian medals and decorations. It is also provided that these medals can be bestowed on members of the suite of Sovereigns, Princes and heads of Governments on the occasion of visits to this country or of the Egyptian Sovereign's visits to other countries. The reason for the creation of this new decoration is that whereas the various orders provide means for rewarding the higher categories of officials and civilians who render services to the State and Sovereign, they do not enable such recognition to be given to the lower categories, a fact which was forcibly brought home to the Palace in the course of the visit which King Fuad paid in the summer of 1927 to the European capitals.

The Turkish newspapers announce that the Director-General of the Bank of Industry and Mining has been dismissed from his post; adding that it is reported that nothing undertaken by this Bank so far has been successful. Among the industrial enterprises in which the Bank was recently stated by the ex-Director-General to be financially interested are the following:—a steel factory at Marash; electricity works and a big mill both at Malatia and at Akserai; and electricity works at Caesarea.

DEAD SEA SALTS.

The Near and Middle East Association held a meeting on November 12 to discuss "Concessions in Palestine." The gathering took place, by kind permission of Mrs. Cobham, at 14, Hans Crescent, S.W.1. Captain E. N. Bennett, who presided, referred to the just claims of the inhabitants of the Holy Land that they should share in whatever profits were extracted from the Dead Sea.

Lord Danesfort related the insistent efforts of a certain group of independently-minded men in the House of Lords and in the House of Commons to gain information from the Colonial Office about the concessionaires for this Dead Sea scheme. In his view the official replies had been entirely unsatisfactory, for there was an evident unwillingness to reveal either the reasons why Major Tulloch and Mr. Novomeysky, about whose record so little was known, or the financial backing which this favoured group enjoyed. What he and those who thought like him wished to have was some guarantee that the Dead Sea potash would never come under the control of the German potash monopoly, and to attain this end a British group of financiers and of scientists had been formed and had applied for the concession. Finally, Lord Danesfort remarked on the iniquity of the system by which so important a matter as the granting of this Dead Sea concession could be arranged by a Government Department, without Parliament's having any say. Whatever agreement was reached ought, in his opinion, to receive the sanction of Parliament before it became effective.

Sir William Beach Thomas, the second speaker, emphasised the enormous importance of potash in the development of agriculture. Cheap potash would not only revolutionise the lives of people, in say, Egypt, the Sudan, France, or Spain, but it would also tremendously help the British colonies, and might even people Australia.

Dr. Homer, a research chemist who was one of the original claimants for the concession, referred to the interest which she had maintained since 1916 in the possibility of freeing the world from the German potash monopoly. She had been connected with three different groups in applying for the Dead Sea concession, but despite her very favourable offer the concession was, it appeared, going elsewhere. Sinister forces were, she claimed, at work to prevent this concession from passing into British hands: no sooner was one bogey quashed than another was hastily erected. She could assure her audience that the Germans were doing their utmost either to prevent the concession from being worked, or, if it were to be worked, to secure its being worked in conjunction, not in competition, with the existing potash monopoly. She explained the reason for German concern: German potash at the mine head cost £4 18s. per ton, and Alsatian potash, under German control, £2 18s. 2d. per ton, whereas potash from the Dead Sea could (owing to the non-necessity of mining, of fuel and so on) be produced, according to her estimate, at well under £1 per ton. From the world point of view, therefore, and particularly from the local Palestine and Trans-Jordan, as well as from the British, point of view, it was essential to bar the possibility of the Dead Sea Salts' ever coming under German control.

The following were among those present: Viscountess Dupplin, the Hon. Lady White Thomson, Judge Hill Kelly, the Hon. Sir James and Lady Connolly, the Dowager Lady Boyle, Sir Edward Boyle, Baron Bonin, Sir William Clark, Sir Henry and Lady Penon, Dr. and Madame Felix Weiser, Orhan Halid Bey, Herr Karl Zeileissen, Lt.-Colonel and Madame Uggla, Mr. and Mrs. Montague Bell, Mrs. L. Cobham, Mrs. E. N. Bennett, Colonel and Mrs. St. John Cooke, Azzam Bey, Mrs. Lindsay Bashford, Colonel and Mrs. Ernest Taylor, Professor T. H. Norton, Captain Gordon Canning, Mrs. Favarger, Captain Walker, Captain Guy Onslow, Mrs. St. John Philby, Miss Sassoon, Madame Wolkoff, and Mr. Roland Michell.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 1.

The Statutory Commission.

An item of last Friday's news, namely, that Mr. W. T. Layton, Editor of the *Economist* and formerly Director of the Economic and Financial Section of the League of Nations, had been invited to assist the Statutory Commission as Finance Assessor, must have been welcome to anyone with a mind filled with the foreboding that the end of so much amateur tinkering of the constitutional pot in India would be acute financial disorder. I have called attention to the separatist tendencies in the Provinces, with new Governors and Executives and Councils, all as if the poverty of India was a fiction of the imagination. Mr. Layton, the report went on to say, will join the Commission in India early in January. Not a day too soon, but better late than never. It would have been better still, if one of Sir John Simon's colleagues had been chosen on his record as an authority in exchequer finance, but that is to cry over spilt milk.

The All-India Muslim Legislators' Association, whose deliberations have been conducted under the guidance and direction of H.H. the Aga Khan, in a revised memorandum for the Commission, remark that "the position of the Muslims of India at the present juncture is one of great difficulty, for while they are fully aware of the fact that peace and popularity with the sister community can be easily secured if they swim with the tide of boycott and non-co-operation, the stern voice of duty warns them; against the suicidal policy of allowing themselves to be exploited as pawns in the game by astute politicians who are seeking to establish an oligarchy and domination of their own in the name of democracy and freedom." That is, of course, no empty rhetoric, but as near the sober fact as one could expect to have the fact stated in a party document.

The wide-awakeness of these Muslim legislators, or of the Aga Khan, is still better seen in the following: "While the Association is not fully convinced that representative institutions are best suited to the traditions and genius of the peoples of India, or that the conservative soil of the East is congenial to the growth of representative institutions from the West, it is bound to take into consideration the success of such institutions in the Near, Middle, and Far Eastern countries. As Parliament appears to have committed itself to a policy of gradual development of self-governing institutions, it proceeds on the assumption that the next stage of development of responsible government would be on the lines of the Government of India Act of 1919. The subjoined memorandum, therefore, is a logical development of the Act, containing a statement of the safeguards designed to protect effectively the interests of the Muslim community in any scheme of reforms."

The Lloyd Dam.

On Saturday evening, in the presence of Sir John Simon and other members of the Statutory Commission, His Excellency Sir Leslie Wilson, Governor of Bombay, opened the Lloyd Dam at Bhatgar, thirty-six miles west of Poona. The dam is said to be the largest in volume hitherto completed in any part of the world. The figures are imposing enough: volume of masonry, 21½ million cubic feet; length, 5,333 feet; greatest height, 190 feet above the lowest foundation; depth of water above the lowest sluices, 143 feet; length of the lake, 17 miles; perimeter of lake, 46 miles, area of lake, 14.7 sq. miles; capacity of lake, 150,000 million gallons; catchment area, 128 sq. miles. The cost was one crore, seventy-two lakhs. A Companionship of the Indian Empire has been conferred on the engineer and designer, Hr. C. B. Pooley. One has known of men given knighthoods for much less "masonry."

Talking of one dam reminds me of another—the dam

across the Ganges that Sir William Willcocks has proposed for the irrigation of Central Bengal. Many readers of THE NEAR EAST AND INDIA would welcome the news that the India Office had this matter before it, and that Sir William Willcocks is to return to Bengal.

East Godavari Floods.

Telegraphic communication between Calcutta and Madras has been restored, and I myself had a telegram yesterday from Madras, but it will be fully two months, it is reported, before the railway line and the ruined bridges are rebuilt. Meanwhile the only way to Madras will be via Dhond and Manmad. The toll of the floods in human life is put at thirty-six, and there has been a heavy loss of cattle and goats. The damage to the crops is said to be slight, except in the neighbourhood of the rivers. Six bridges in all on the Madras and Southern Mahratta Railway have been washed away.

Sabarmati Satyagraha Ashram.

Strict morals, including celibacy, coarse food, and no spices, and hard work—that was to be the way of living at Mahatma Gandhi's Satyagraha Ashram at Sabarmati, but there comes a report from Surat that radical changes have been made. "It would appear," runs the report, "that ever since Mr. Gandhi retired from the *Ashram* about two years ago, he has been noticing undercurrents of resentment against the code of life and discipline at the *Ashram*, and the conviction grew on him that, although through his own personality the present *Ashram* life might continue undisturbed during his lifetime, there was trouble ahead." So changes are to be made. The condition of celibacy is to be abolished, and the name is to be changed from "Satyagraha Ashram" to "Industrial Home." A lamentable change, that last; the other change is perhaps not to be lamented. Men are men: it is never any use pretending they are not.

Mr. S. R. Das.

In the person of Mr. S. R. Das, Law Member of the Executive Council of the Governor-General, whose death occurred last Friday in Calcutta, Bengal has lost another member of a family distinguished at the Bar and in the Courts. Chittaranjan Das, the Swarajist leader, was his cousin, and he had a brother, a Judge in Rangoon, and a cousin, a Judge in Patna, the latter being Chittaranjan's brother. It seems only the other day that I attended a meeting at the Calcutta University Institute, organised by the young men as a send-off to the newly appointed Law Member, and listened to a speech, a good and sensible one, from him, and now Mr. S. R. Das also is dead. He had been very active up to the end in promoting a scheme for a Public School for Indian boys at Dehra Dun, having, it is said, collected twenty lakhs of rupees for it. Mr. Das's recent visit to England was in connexion with the selection of a headmaster for this school. India still, when she wants a good teacher, goes to England for him or her.

THE LATE LALA LAJPAT RAI.

THE NEAR EAST AND INDIA regrets to announce the death, which occurred suddenly from heart failure on November 17, of Lala Lajpat Rai, the leader of the Nationalist Party in the Punjab and of the Independent Party in the Legislative Assembly. One of the foremost supporters of the old Indian National Congress, Mr. Lala Lajpat Rai, who gave up a very lucrative practice at the Bar in the furtherance of his political activities, visited this country in 1901, with the late Mr. Gokhale and enlisted considerable support for the Indian Nationalist movement. Deported subsequently from India he went to America. After rendering loyal service to the Allies during the War, he returned to India after the cessation of hostilities and was a prominent figure, if playing a somewhat undecided rôle, in recent political controversies.

INDIA IN PARLIAMENT.

Except for a somewhat belated and unsuccessful effort by the Communist Member for Battersea N. during the debate on the Address, to enlist public sympathy on the hard lot of those of his "co-religionists" who might have found their activities curtailed by the Public Safety Bill, interest in Indian affairs since the House re-assembled has been confined entirely to questions and answers.

In reply to Mr. Day, Lord Winterton said that the Secretary of State had not yet received the conclusions of the Government of India on the Indian Cinematograph Committee's report, but that he would no doubt be notified in due course of the decision.

The pending inquiry into the vexed question of the Meston Settlement invests with particular interest the statistics elicited by Mr. Willoch respecting the revenue (both Central and Provincial) raised from land revenue and taxes on income, respectively, at various dates since 1913. The following are the figures:—Land Revenue: 1913-14, Rs. 32,25,68,961; 1920-21, Rs. 32,03,81,107; 1924-25, Rs. 35,83,58,138; 1927-28 (Revised Estimates), Rs. 37,35,69,600. Taxes on income: 1913-14, Rs. 2,90,51,573; 1920-21, Rs. 20,91,74,322; 1924-25, Rs. 16,21,23,951; 1927-28 (Revised Estimates), Rs. 15,96,42,000.

Lord Winterton, in reply to a supplementary question by Mr. R. Young, who had asked for particulars regarding the notice given to the Southern Punjab Railway of the Government's intention to exercise its right to purchase the line, refused to be drawn into any expression of opinion as to whether the decision marked a further step on the way towards nationalisation. "Generally speaking," he pointed out, "the policy of the Government of India in recent years has been to acquire these railways," and again emphasised that no adequate or fair comparison could be drawn between the condition of railways in India and this country.

Asked to state the number of cases during the last ten years in which Indian Ruling Princes have been deposed at the instance of the Paramount Power, or have abdicated, the Under-Secretary said that during the period mentioned one Ruler of an Indian State had been deposed namely, the Maharaja of Nabha, and four had abdicated—the Maharaja of Indore, the Rana of Bilaspur, the Nawab of Loharu, and the Jam of Las Bela. While declining to satisfy Mr. Saklatvala's curiosity as to the reasons which had decided the Government to take action in the instances in question, on the perfectly proper grounds that the query did not arise out of the main question, Lord Winterton added that the case of the Maharaja of Bharatpur did not fall within either category. Nor was the member for Battersea N. any more successful when he endeavoured to elicit "details of voting in the provincial councils and the Council of State in India for and against the motions to appoint Committees for partial co-operation with the Simon Commission, stating, in particular, votes for and against such resolutions by Government officials, Government nominees, elected representatives of select bodies and organisation, and elected representatives of general electorates open to all enfranchised citizens and giving particulars of the representatives selected to act on these Committees, as to the organisations that returned them, and the total number of electors in such organisations."

Instead of furnishing Mr. Saklatvala with what would have amounted practically to a Blue Book to himself, Lord Winterton merely referred his interrogator to the published proceedings of the Council of State and the Provincial Legislative Councils, and to Command Paper 2923 of 1927, showing the results of elections in India. The probably unconscious touch of humour residing in the last part of the Under-Secretary's reply, it is to be feared, was lost upon the hon. Member.

As was only to be expected, the Indian States Inquiry Committee's work has also come in for attention. In a written answer to Mr. Gardner, who asked whether the

Government was aware that the representatives of the peoples of the Indian States had been refused permission either to hear the arguments of Counsel for the Indian Princes, or to give evidence before the Committee and the reasons for such a course, "in view of the fact that there are treaty obligations by which the Indian Princes have agreed to secure the contentment of their peoples and to ensure justice in administration," Lord Winterton stated that the procedure to be adopted in regard to the taking and hearing of evidence was a matter for the Committee itself, and that the Secretary of State was not prepared to interfere with its discretion.

Although Lord Winterton was later able to assure Mr. Rennie Smith that the Committee's report would be submitted to the Secretary of State and not to the Government, he is not yet in a position to say whether the report and the evidence will be published or whether the Committee's recommendations regarding the economic and financial relations between the Government of India and the States will be placed before the Indian Legislature for its consideration and opinion.

As the result of a deputation introduced by Mr. J. H. Thomas to the Secretary of State last June on the subject of the Bengal Criminal Law Amendment Act, Lord Peel has written to Mr. Thomas stating that for some time past there has been no person in prison under the Act, and that the Bengal Government have now found it possible to release those few persons who were still under detention in their own homes or in villages. There are still a small number under obligation to report their movements to the police, although not otherwise under restraint, but even those it is hoped to release from their obligations in a week or two.

THE INDIAN STATES INQUIRY COMMITTEE.

As foreshadowed in THE NEAR EAST AND INDIA a fortnight ago, the Indian States Inquiry Committee has adjourned until November 22. At the last sitting on November 13, Sir Leslie Scott concluded his survey and exposition of the evidence submitted by the standing Committee of the Chamber of Princes and a large number of other rulers.

The printed material, examination of which by Counsel has already occupied fourteen sittings, covers over 3,000 folios of documented instances of defective working of the machinery by which the relations of the Princes and the Paramount Power are at present regulated and of alleged encroachments, by administrative action or British Indian legislation, on the rights and interests of the States. The last of the four volumes into which the material, for the sake of convenience, has been divided, on which Counsel was speaking before the adjournment, relates to a variety of economic questions in which it is held by the Princes that the interests of their States have suffered materially on account of policies adopted by British India in respect of excise, opium, customs, income-tax, posts, telegraphs and telephones.

After the adjournment it is understood that Counsel for the Princes, in the course of probably three more sittings, will bring into closer relation the legal and constitutional position as laid down by himself and other Counsel and the facts as set forth in the above mentioned printed material. As previously indicated his primary endeavour will be to show that the present system by which political relations with the States are conducted is unsatisfactory because it is at variance with the true constitutional position, and does not carry out the declared policy of the Crown to safeguard the rights of the States.

The French girls' school of Our Lady of Zion at Smyrna has been closed by the Turks.

Lieut.-Colonel Sir L. B. H. Haworth, Political Resident in the Persian Gulf, who recently received his knighthood, has retired and is returning to England shortly.

THE SERBO-CROAT CRISIS.

By C. D. BOOTH.

The past week has been characterized by one event of major political importance. King Alexander has gone to Paris, to consult his dentist certainly, but also, it is said, to take advice from French statesmen as to the best means of reconciling Serbia and Croatia. At the same time Dr. Antun Trumbitch, the Dalmatian associate of Dr. Matchek, is also in France seeking to present the Croat case in an unofficial way and thus to gain the indirect support of the Quai d'Orsay.

Whilst these negotiations are going on the situation in Yugoslavia remains critical. All the political leaders of Belgrade are anxious for a return to normal conditions, but each one has a different view of the means required to effect it. The followers of M. Voukitchevitch, President of the Radical Club, demand severity in dealing with the Croatian dissidents. M. Aca Stoyanovitch, also a Radical, backed up by the banking and industrial interests, definitely favours a policy of conciliation and concession, and M. Davidovitch, the Democratic leader, has upon several occasions expressed his agreement with the Croats in their demand for revision of the Constitution.

Dr. Koroshetz, leader of the Slovene Clericals, Prime Minister by the grace of M. Voukitchevitch and consent of the Radical Party, pursues a policy of tactful inactivity, realizing full well that, if he offends his Serbian allies, he will be removed, but that, if the Croats eventually win, he will profit by not opposing them too strongly during the present struggle.

Here in Zagreb the atmosphere is clearer. The Peasant-Democrat coalition led by Dr. Matchek and M. Svetozar Pribitchevitch stands united in its attitude of ignoring the Belgrade Government and all its works. A social boycott has been applied to all persons and institutions connected with the central Parliament. This boycott, although not complete, is causing much embarrassment to officials and a considerable falling off in trade between Belgrade and Zagreb. It is also being used as an instrument to silence moderate Croats who would favour meeting the unofficial emissaries of Belgrade in a friendly spirit.

To the boycott the Government has retaliated—so it is alleged by the Croats—by deliberately mismanaging the State railways in such a way as to deprive Zagreb of its normal supplies of wood, coal and sugar. That there is a shortage of these commodities cannot be doubted, but past history of the railway administration shows mismanagement to be a not unusual condition in all parts of the realm. Hence the coincidence of the shortage and the boycott cannot be accepted as adequate evidence of malice on the part of Belgrade.

The responsible heads of the Peasant-Democrat coalition in Zagreb, from whom the writer secured statements last week, seem to differ slightly in their fundamental demands, although they work in close accord in all tactical matters.

Dr. Matchek for the Croatian peasants says: "It is impossible that we ever return to the Skupshtina in Belgrade, not only because it would be against the honour of the Croat nation, but, also because we could achieve nothing there. The military camarilla rules in all Serbia." When asked what he was demanding, he stated: "Separation of Serbia and Croatia in all things except their common allegiance to the King; in other words, personal union."

M. Pribitchevitch, head of the Serbian Democrats in Croatia, had a somewhat different formula. He said: "The conditions of our return to the Belgrade Skupshtina are dissolution of the present Parliament and the holding of free elections. If these be granted, we shall have a majority, and will then demand revision of the Vidovdan Constitution, so that Croatia may have a wide form of legislative and administrative autonomy."

It is here to be remarked that M. Pribitchevitch knows

from former experience that free elections in the whole country are impossible. Hence his seeming moderation may be assumed for the benefit of his constituents who are Serbs and only recently converted to the Croat doctrines.

The peasants themselves, whom the late Stepan Raditch taught to be conscious of their power as the greatest factor of production in an agricultural State, are determined to fight for equality of franchise and taxation, together with freedom from the corrupt and incompetent bureaucracy of Belgrade. They realize that unification of law under a central Government will not work in a kingdom of which some provinces are highly organized and others are inhabited by nomadic peoples not yet emerged from tribal forms. Therefore they will follow their leaders in the fight for decentralization and autonomy.

Economic pressure inside and outside Yugoslavia is being exercised towards the same end. Hence it is highly probable that some formula will shortly be found which will permit the King to use his good offices in determining a situation which is disastrous to his country, and a cause of unsettlement to the whole of south-eastern Europe.

EGYPTIAN POLITICS.

We have received the following telegraphic communication from Wissa Wassif Bey, formerly President of the Egyptian Chamber of Deputies:—

I have the honour to communicate to you a summary of the first meeting of the Egyptian Parliament held despite the prohibition of the present Government, whose troops and policemen garrison the streets and whose detectives pursue Members of Parliament.

According to Article 96 of the Constitution, which reads: "Parliament is convoked in ordinary session every year by the King before the third Saturday of November. In default of not being convoked Parliament meets of its own accord," and, as the present Ministry has impeded by armed forces the meeting of Parliament in its buildings, therefore the House met on the third Saturday of November at six p.m. in the buildings of *Al Balagh* newspaper. The House elected as members of the Bureau Wissa Wassif Bey, President; Shamsy Pasha and Hussein Hilal Bey as Vice-Presidents; and as its Parliamentary secretaries and whips the same members as in the last session. Nahas Pasha spoke as follows: "The present Ministry has not only ignored the convocation of Parliament, but it has mobilised all its armed forces to prevent the constitutional meeting of the nation's representatives, although it is obvious that the armed forces are intended only to protect the nation, not to be used against it. We are here to-day, in respect of the sacred oath of allegiance to the Constitution, to defend the nation's rights and finances against all aggressors. I moved the following motion: 'Whereas the Parliamentary régime has been in force since March 15, 1924, and whereas Article 155 of the Constitution states that nothing laid down by the present Constitution can under any pretext whatever be suspended, except as a temporary measure under martial law or in time of war; whereas in no case can any meeting held under conditions laid down by the present Constitution be impeded; whereas Article 138 gives Parliament alone the right of sanctioning Budget revenues and expenditure, otherwise the old Budget remains in force; whereas Article 137 states no public loans can be raised nor financial engagements contracted before previous sanction by Parliament; whereas the present Ministry by despotically suspending the Parliamentary régime and by closing down Parliament has made wanton aggression against the Constitution despite all sacred oaths of allegiance; whereas Parliament approved the declarations of the previous Constitutional Government concerning great irrigation projects; whereas the Ministry's assumption of the right of legislation is a violation of the law issued in 1926; therefore, be it resolved first, that the House reiterates a vote of no-con-

fidence in the present Ministry; secondly, that the Ministry is gravely responsible for acts committed against the Constitution; thirdly, that last year's Budget is alone the one that must be in force, and Ministers are responsible personally for expenditure unauthorised by Parliament; fourthly, that the House condemns the hasty attempt at the execution of the project for the Gabal Awlia Dam in the absence of Parliament; fifthly, that all political, commercial and financial engagements with foreign Powers or individuals are null and void and not binding on the nation; sixthly, that the House demands the withdrawal of the armed forces occupying Parliament buildings and preventing the nation's representatives from fulfilling duties imposed by the Constitution."

The resolution was carried unanimously. Nahas Pasha then suggested that: "As the present Ministry has prohibited newspapers and printing offices from publishing Parliament's resolutions, members should communicate them directly to their constituencies and then return to Cairo for further meetings." This suggestion was unanimously accepted. Fikrabaza Bey, in the name of the extreme Nationalists, declared that in the face of the present crisis the minority and majority should amalgamate, that there should be no more Party strife, and that all should present a united front and oppose the existing unconstitutional rebellious Ministry. Sayed Ayoub moved the necessity of meeting in the Parliament buildings at all cost. The Bureau was charged to find the necessary means for carrying this out. The meeting ended at 7 p.m. The President will fix the date of the next meeting. The Senate held a similar meeting and passed the same resolutions.

THE PRESS IN THE NEAR EAST.

The Neo-Turk Script.

It is significant of the thoroughness with which the Ghazi's *mot d'ordre* regarding the writing of Turkish in Latin characters is being carried out that the Press continually returns to the subject in editorial comments, apart from a faithful chronicle of every incident connected with the introduction of the new letters. For a large number of Turks who had some knowledge of a foreign language the learning of the new script would, of course, present no difficulties; but the sense of national solidarity is as carefully displayed in this matter as in all others, and the whole nation is represented as at one in its laudable efforts to give effect to Mustapha Kemal Pasha's lead. Thus no incongruity is felt in depicting in a leading article in *La République*—the French edition of *Jumhouriet*—the progress of the new writing in the following terms, the writer being proficient in at least two European languages:—

The fact is that in spite of all the effort that we have made for months now to initiate ourselves in our new alphabet, we are still far from being able to read and write fluently with the new letters. We hesitate in writing and we stutter in reading, and that with much slowness and hesitation. On the receipt of a letter written in the

new characters, our face involuntarily clouds over before we begin to read it, and it is only by carrying through the reading—or rather deciphering—with courage and, as it were, forcing ourselves to it, that we are able at last to heave a sigh of relief."

Learning the new alphabet is compared with the attitude of a man who is roused out of bed before he is really awake, when his whole instinct prompts him to turn over and go to sleep again; but the urgency of the business before him compels him to bestir himself. Learning the new alphabet has to be regarded as the most serious problem of the day.

The Great Guide of our nation, the President of the Turkish Republic, has shown us that it is the golden key which will open wide before us all the doors of civilisation and of all the progress that will lead us to the height of prosperity and happiness. Our second guide, the head of the Government, Ismet Pasha, has declared in his turn that he is wholly convinced that the new characters are called to open, assuredly, a new era of regeneration and of progress for the country and the Turkish nation.

The President of the Republic, the august Ghazi, has stated that the new alphabet constitutes his most precious gift to the Turkish nation. Nothing could be more just, for if it is true that we are resolved to do all that is required to take our place at the side of the great modern peoples, we must know that the new letters come at the head of what we have to accomplish to realise the end that he have at heart.

Minorities in Yugoslavia.

The following communication has been addressed by Dr. Stephan Kraft, President of the German Deputies' Club in Yugoslavia, to the Yugoslav Prime Minister and to all the party organisations:—

I have to propose to the Government, or to the leaders of the Ministerial parties, in accordance with the repeated resolutions and the repeated recommendation of the Inter-Parliamentary Union and of the International Union for the League of Nations, that it should resolve, either on the strength of a parliamentary motion to be introduced by the German Party's organisation or on the strength of a previous agreement among the Parties, to form a Commission composed equally of parliamentary representatives of the majority and of the minority among the population. This Commission would be charged to examine the condition of the national Minorities and their grievances, in order that injustices and breaches of the law should be removed and avoided and disputes settled. In the first place this Commission would have to examine the actual and the legal position of Minorities in respect of cultural and school questions, which constitute the kernel of the Minorities' problem, with a view to finding a basis for an agreed solution, which will satisfy both sides and will be able to consolidate permanently good relations between the majority and the minority.

The Minority question, and with it the necessity for a forum of discussion above party, has become very real as a result of the Primary Education Bill brought in by the Government. The representatives of the Minorities had no possibility of presenting their point of view and their well-founded legitimate wishes when the Bill was drafted. Inasmuch as the terms of this measure endanger the most important rights, safeguarded by the Constitution, and the guarantee of the free cultural development of the Minorities, and as the proceedings in the Committees offer no opportunity for a comprehensive and impartial discussion, freed from party considerations, I have to request that the School question should be handed over to an equally balanced Commission, in order that this may find the basis for an agreed solution, which will enable the work of the Committee to be brought to a rapid and successful conclusion. The establishment of an equally balanced Minorities Commission would certainly enable the Government permanently to be informed of the position of the Minorities question and thereby to pave the way for a final regulation of the legal and equitable position of Minorities in the State."

THE KURDS.

By A. SAFRASTIAN.

[At the Seventeenth Orientalist Congress recently held at Oxford, Mr. A. Safrastian delivered a lecture upon "Researches into the Origins and Ethnological Formation of Kurds," which we are permitted by the courtesy of the lecturer to publish below.—ED.]

In attempting to approach the problem of the origins of the Kurdish tribes and their ethnographical formation through the early historical period, one has to consider, it appears, one fundamental rule and a few essential points.

Such an approach to the question of Kurdish origins seems to be the more intelligible when it is realised that many complications of a particular nature will otherwise arise, complications which have baffled great Orientalists up to now in offering a reasonable hypothesis towards the solution of this interesting question. The fundamental rule referred to above should consist in making a clear distinction between the original Kurdish names, personal names, place, river and mountain names, and such other peculiarities as they can be ascertained from historical records, and the distorted transliterations and perversions of those names as imposed upon them by the foreign writers, such as the Greek and Roman classical writers in earlier periods and the Arabic, Persian, and Turkish writers in later times.

It is needless to say that these inaccurate preservasions of most Kurdish original names by foreign records may partly be explained by linguistic and orthographic limitations which have prevented these writers from correctly reproducing Kurdish names, and partly by the ignorance and a sense of ethnic superiority of those authors, by the carelessness of their copyists, and so on.

Great Orientalists like Sir William Ouseley (a), Barbier de Meynard (b), Theodor Nöldeke (c), and others have so well emphasised these points that nothing better could be added to them.

With a view to illustrating both these deficiencies of foreign historians in relation to the Kurds and their names, it is sufficient to mention Herodotus (Book VI. 101), who, describing the Busae, one of six Median tribes, has made, it appears, one inevitable and one careless mistake. Oppert (d), referring to this name Busae, says that this reminds us of the word Buza, Sanskrit Buga, which means "autochthonous." On the same page, Oppert further says that the name Busae, although essentially Aryan, can but be the Persian translation of its own Turanian name, so that Busae would really be the Indo-Germanic word for "cultivator."

I submit that this tribal name Busae, as mentioned by Herodotus, is to be identified with the old name Bösa, Posa, a class of wandering tent-dwellers, professional singers and dancers, who went about to entertain settled peoples. The name Posa exists to-day in the same sense, just like the gipsies in Eastern Europe. One is often warned by experienced philologists against attaching much importance to vocal identity existing between classical and modern names. But in this case there appears to be little doubt. As the Greek alphabet did not possess the lingual s, Herodotus naturally could not reproduce Bösa; secondly, he may have confused the name of an autochthonous tribe with one of the invading Median tribes.

This brings me to some other essential points which may usefully be borne in mind in dealing with the Kurdish names.

It is a well-known fact, important for such an investigation, that the Kurdish people has never had a script of its

own, and, therefore, no written literature in its own alphabet. No records of its remote past have been preserved in cuneiform inscriptions by its own rulers or historians; its national epics, lyrics, and oral traditions, unless preserved by hazard in the histories of its neighbours, have in the course of centuries lost all shape and basis; nor is its old history, like that of some of other peoples, dimly shadowed forth in myth or legend until comparatively modern times. As Professor Lerch (e), the Kurdish scholar, says, but for the Persian, Armenian, Syrian and Arabic historians, who give only meagre information about them, we should have known still less in regard to the Kurdish tribes.

Another point to be remembered in this connexion is what the great Iranian scholars, Spiegel and Geiger (f), have pointed out long ago that both from linguistic and historical standpoints the Kurds have had closer connexion and intercourse with Iran and Armenia than with any other neighbours who have come in contact with them; and, therefore, it is to be implied, truer transcriptions of ancient Kurdish names have been preserved in the Pahlavi, the later Sassanian and the classical Armenian records than in those of Greeks, Arabs and others.

It is hardly necessary here to go into the maze of the Kurdish names as used by the Greco-Roman classics. Those bewildering variations have already been minutely examined by Nöldeke (g), Weissbach (h), and G. R. Driver (i). The data supplied by those classical records will be quoted here when they may supplement the information obtained from the Eastern records. Divesting the subject from these classical associations in so far as it can be done on historical evidence, I propose to lay down before this Congress some results which I have obtained in extensive travels among the Kurdish tribes, from a comparative study of the language, place and tribal names and of the available records.

To begin with the name Kurd as recorded in old Persian. The legendary story of Artakhshir Papakan, the founder of the Sassanian dynasty, as recorded in the "Karnamakh i Artakhshir i Papakan" (j) refers to the battles which Artakhshir had to wage against "Madig, the King of the Kurds" (k). In Pahlavi, as well as in modern Persian and Turkish, the word Kurd means Wolf. Considering the reputation which certain Kurdish tribes have enjoyed from the Sumerian times down to early Assyrian Monarchs (l), it is not impossible to assume that, following a much older tradition, the Achæmenian and Parthian dynasties applied this patronymic to the Kurds, first as a term of contempt and disparagement, and secondly as a symbol of the terror which these ferocious

mountaineers occasioned to the ruling houses in all the surrounding regions.

I am not competent to say whether there is any etymological connexion between the Sumero-Babylonian geographical term Gutium, Guti and the later Assyrian names Kûti, Kurtie, both forms used by Tiglat Pileser I (*m*) (ca. 1100 B.C.); and then between these Sumerian and Assyrian appellatives and the Iranian term Kurd.

M. Streck (*n*) and Nöldeke agree that the original name of Jabal Judi, in Bohtan, one of the main subjects of Kurdish heroic poems, was Gudi, and that this change of the name was due to the transplantation of the name of Jabal Judi, in Arabia, on Gudi in Bohtan, during the Arab invasion in the seventh century of our era. This epic name Gudi appears to correspond in many respects with Sumerian Gutium, Guti, as the homeland of the people who bear the name.

In the circumstances it seems difficult to trace any historical analogy between the Guti people as mentioned by the Sumerians and the Iranian name Kurd which has become the eponym of the race.

This system of alien racial eponyms has not been imposed on the Kurdish tribes alone; but also on their immediate neighbours, with whom they have been in contact from time immemorial, such as the Armenians, who, in spite of the Behistun inscription of Darius, the records of Herodotus, and all subsequent classical writers, still call themselves Haikh, Hayastan; the Georgians, who call themselves Kharthli, Sakartvelo; and with certain qualifications the Nestorians, who even to-day still use their name Assuri, Aisori, Assyrian, and so forth. But that the Kurds have adopted this racial appellative, and apparently have made it their own, is merely due to the fact that, possessing no written literature in the earlier ages, they have partly forgotten their genuine eponym; and that by the strength of later traditions in the Muhammadan period have come to be reconciled to this name.

There is, however, more than one proof to state that the original eponym the Kurdish tribes gave themselves was Mâr, Mar, Mer, and not Kurd.

I have heard this name Mâr and Mar among very old tribes as far from each other as the clans of Mogk, the Moxuene of the Greeks; of Bohtan, and among the Sinjabi tribes living in the Eastern slopes of the Zagros, as a common link between them and as a standard of ethnical dignity and honour. For instance, in a case of Mogk, while two tribal chiefs were quarrelling over a flimsy matter, one of the parties, with a view to awakening the better nature in the other, appealed to him by the following question, "na dû Mar e?" the nearest translation of which would be, "art thou not a Mar?"—just in the same way as an Englishman would call upon another to "be English."

On another occasion in Bohtan, a Kurdish muleteer belonging to the Batwan tribe, asked another Kurd of the Duderan tribe—"Boda Mar—adi cinuna?" which means "Is there no mar-ism in thee?"

This oral tradition of their Mar origin is still kept in the memory and the speech of those old tribes, whose name at least can be traced by philological identification to Herodotus and other records.

There is some historical evidence to prove this

hypothesis. Several Armenian records from the fourth century onwards to modern times refer to the Kurds as Mar, Mar (*q*), the letter (*q*) being the plural terminal in old Armenian; Maracuoc-Asharh, the land of the Mar(*q*) (*o*), side by side with Kordukh, Kordrikh, Tmorikj, and seven other districts jointly called Korjaikh or Korduac Asharh, the land of the Kurds, as specified in the Armenian geography attributed to Moses Khorenaci.

It may be held true that the Armenian historians of the fourth and fifth century used Maracuoc Asharh as a geographical expression in a narrow sense, and that after the seventh century it was extended to cover all the districts considered as integral parts of Korjaikh (*p*).

In his chronicle (*q*) Berberian, mentioning the rebellion of Bedrkhan Bek and other Kurdish chieftains in the forties of last century, calls them the Princes of Mar (*q*). Father Tchamitch (*r*), in his standard "History of the Armenians," follows the same tradition as the above-mentioned historians of the seventeenth century.

This generic name Mar, preserved by the Armenian tradition, coupled with a dim survival of the same eponym among the old tribesmen themselves, may lead to the conclusion I have drawn above.

It is obvious that the first Armenian historians used the name Mar to mean also the Medes.

Whether this name has any philological identity with the Assyrian Christian title Mar, meaning Lord, as in Mar Simun, Mar Jakob, and so forth, is a question for the Syriac scholars to consider.

This name Mâr raises a series of questions which may closely be connected with the various origins and formation of the Kurdish tribes.

Is there any ethnic link between this name Mâr and the people Maryannu (*s*) of the Hittite inscriptions?

Does this term Maryannu consist of the root word Mâr and the termination *annu*, the nominal formation in the dialect of the Subarean speech of Indo-Iranian origin, as Sidney Smith thinks.

It is to be noted that more or less similar suffixes form place names and family names also in various Kurdish dialects as well as in the Armenian. *An*, *ani* in Kurdish, such as Bohtan, the land of the Bôchti Kurds; Mihrani, the Miran tribes; Milli, tribes of to-day in Turkish; Hadabani Kurds, the tribes living in Hadyab, the Adiabene of the Greeks. Again, *an* terminations, *uni* in the Armenian, such as Pagaran, the land of the Baqratanis; Arshakuni, the family name of Arshak, the Arsacids of the Greeks (*t*).

This *Maryannu* nobility governed their native lands of Mittani and Hurri about 1450 B.C., followed by hosts of their mounted retainers, and owed an apparently nominal allegiance at times to Mittani Kings, at others to the great Hittite Kings at Bogaz-Köi, and possibly to Egypt, and later on to Assyria.

The existence of this Mar, Maryannu people in Eastern Tigris regions under the variants of mâ-uru, má-er, matumâer, has been mentioned by Hammurabi (*u*). Hommel (*p*. 393) finds it very difficult to explain this name Mar(*ki*). Perhaps the Kurdish and the Armenian traditions about Mar can elucidate this question.

Conditions of political relationships of this kind have presented such a historic continuity in Kurdistan and

Armenia through the ages down to modern times, that a deduction seems to be inevitable: namely, that in the second millenium B.C., if not earlier, some sort of feudal aristocracy calling itself Maryannu ruled over Mittani and Hurri, countries which by their geographical positions as defined by the Hittite records have been identified roughly with Kurdistan and Armenia (v). The Sumerian records refer to the same countries as Gutium and Subartu (w), Gutium and Urartu.

At the present stage of our archæological knowledge it would seem impossible to discover any connexion of Kurdish tribes with those events which took place between the invasion of the Aryan tribes and the downfall of Assyria and of the Khaldian Kingdom at Van.

Professors Sayce and Lehmann-Haupt may probably inform the Congress whether any link can be traced between the ruling House of Musasir and Manna and some of the Kurdish tribes which have lived and still live around the shores of the Lake Urmia and all along the Great Zab. I venture to submit that one of those districts, Zikirtu, mentioned both by Sargon of Assyria (722-705 B.C.) and Rusas of Khaldia, may have something to do with the name Kurd. Zi-Kirtu, Darius names the district Asagarta (x). Herodotus (VII. 85) describes these Sagartians in a graphic manner. Ptolemæus (VI.2.6) places them at the gates of Zagros. Putting together all the information that can be derived from above sources, and considering a certain likeness of the names, I am inclined to identify these Sagartians with the Shikaki, a powerful Kurdish tribe of rough-riders wandering to-day between south of Lakes Van and Urmia and as far south as Bohtan. The description of their dress and armour by Herodotus would have been true up to modern times, with the exception that to-day, in addition to dagger and lasso, they carry also the modern quick-firing rifle.

Many tribal names of to-day can on more or less similar lines be approximated to ethnic groups as preserved by the sources mentioned, as well as by the Syriac records, Tabari and Byzantine chronicles.

The orthodox historiography which makes out the Kurds to be the descendants of the Medes, or at least to have coalesced with them to such an extent as to produce the complete disappearance of the latter, appears to be more than justified in the light of modern research.

It is now agreed that the Amadai or Mada, first time mentioned in 835 B.C. by Salmaneser, were once the invading Aryan tribes who eventually formed the Median Empire. Can this tribe Amadai be identified with the great House of Amaduni of Armenian classics? The Satraps of Amaduni family, called "Amadunians Nahar-rûtiûn" in Armenian, held one of the highest ranks in the Armenian Court under Arshakuni Kings. They played some important parts. For instance, Prince Oda Amaduni, "who had conserved the Armenian treasury (during the absence of King Tirdat in Rome in 159 A.D. was raised to the highest dignity in the state by the King on his return." (y) Again, Prince Vahan Amaduni was nominated in 428 A.D. the Commander-in-Chief of the army after the deposition of King Artashir by the Persians (z).

Another Aryan tribe, the Ummân Manda, the Manda crowds of the Assyrian records, appear in the Armenian history, like the Mandakunis, through some Kurdish connexion as yet undefined.

There can be little doubt that the name Manda is the same as the Armenian Satrapy of Mandakun; Manda, the letter *k* interposed between the two long vowels; the end-

ing *uni* making the family name. Mr. Sidney Smith agreed with me on this identification.

To mention only one instance, two Mandakuni princes led their cavalry in the religious war which the Armenians waged in 451 A.D. against Sassanian Persia (aa).

These tentative identifications by no means imply that the Amadai or Umman Manda and many others like them were Kurdish by origin and Armenian by political association, or *vice versa*. They are merely produced to show that the process of racial individuality has gone through many contacts, battles, gradual and mutual assimilations and cultural influences.

It is possible to demonstrate on historical evidence that between the eighth and first centuries B.C. the older Kurdish groups of Sahrazor, in its wider sense, and of the Median plateau were often strengthened by fresh Aryan and Turanian tribes, such as Bactrians, Indians, Scythians, and even pure Caucasians. Since the Muhammadan period they have amalgamated many groups from their immediate neighbours.

To such an ethnographical evolution may be ascribed the vigour and the virility of the Kurdish people, which is not only healthy in physique and morals, but also full of promise in respect of economic and social progress.

The Kurds are still in the tribal stage of social organisation as they were 3,000 years ago. They have stood the test of centuries and have maintained their individuality through storm and stress. They are as good human beings as anybody else. And if there are some prejudices still widely held against them, they are certainly due to ignorance and lack of historical perspective.

CHRISTMAS CARDS.

Already in London there are abundant jolly signs that the season of Christmas is approaching, so that the ordinary man and woman at once think of presents, or at least of cards that must be sent to somebody. Long months ago, however, Messrs. Raphael Tuck and Sons had been preparing to cope with this seasonal desire, and all sorts of cards and other small gifts have been devised by them. What one particularly notices, in addition to their usual high standard in card-production, is the ingenuity and artistry which have gone to the manufacture of such useful things as calendars, picture books, "bon appetit" and "lacetite" paperware, transfers, and "Milady's Handkerchief Series." Neither the discerning mortal with plenty of leisure nor the harassed business man can go far wrong in selecting from Messrs. Raphael Tuck's catalogue.

DR. HAROLD WILLIAMS.

The death is announced of Dr. Harold Williams, Director of the Foreign Department of *The Times*. Dr. Williams, who was fifty-two years of age, had a remarkable facility in languages. He was particularly interested in Russia and the other Slavonic-speaking peoples of Europe, but he was also very familiar with the problems of the East, and especially of Western Asia. Among his many linguistic achievements was ability to read and to speak Arabic and Turkish. He was a man of great personal charm, and his death will be a loss not only to his colleagues of *The Times*, but also to a very wide circle of personal friends.

Three people were killed in an explosion at Gabrovo, Bulgaria, on November 13.

Government candidates secured 55 per cent. of the votes polled in the election to seats in the Bulgarian Conseils Généraux on November 12.

Five truck-loads of scientific works recently reached Belgrade University as a first consignment of the equivalent of 1,311,680 gold marks accepted in this form as German War reparations to Serbia.

The brigand brothers Koumbaioi, to whose extradition Albania gave his consent, arrived last week at Corfu, where they confessed that they captured the Opposition candidates, MM. Mylonas and Melas, during the August elections near Joannina.

On the occasion of the eighth anniversary of the signature by Yugoslavia and Italy of the Treaty of Rapallo (November 12) students called a meeting at the Belgrade University. Serious anti-Italian demonstrations were reported from Liubljana, where violent speeches were made against Italian policy.

Book Reviews

THE JAZZING OF BAGHDAD.

"BAGHDAD AND POINTS EAST." By Robert J. Casey. (London: Hutchinson. 18s. net).

Mr. Casey is an American. He believes in Romance. With almost heart-breaking assiduity he tears the heart out of the Past. When the moonlight shines over Palmyra, Babylon, Nineveh and the like he emerges with all the paraphernalia of verbal mechanism to repeople for us these cities as they were in times when History sifted itself from Legend. The process is, so to speak, the jazzing of the Middle East.

But not in any sense of mere entertainment. Mr. Casey is reverent, is really imaginative, is obviously a true believer in the inclusion of verbal jazz among classical forms. His knowledge is not to be despised, and his enthusiasm is of quite terrific quality. These are considerable assets: and who are we to belittle his giving to the saxophone all the best theses in Syria and Iraq?

There is no pose, surely, in Mr. Casey's desire to see "beyond the stars": he had an assignation with Scheherezade, and the present reviewer, at any rate, believes that he kept it. The motor transport which took him to Palmyra was for him a caravan: and he was travelling with ghosts. And when, by the Temple of the Sun, he one night met Zenobia weeping, he wrote:—

Here is the eternal anomaly of the desert—by day one looks upon a scene of wreckage—the wreckage of splendid buildings—the wreckage of the high hopes in which they were pieced together. By day one sees evidence that an empire has paused here for its fleeting glories and passed on over the bone-strewn highway of all empires. By night the years slip away. Shadows put new roofs over the broken colonnades, and pave the rutted streets with dull basalt. The dead stir in the tombs that give the horizon its jagged outline and they troop down here to this crossroads in the wilderness to speak of love in scentless gardens, to haggle with ghostly caravans from the no less ghostly East, to sit about patches of swamp fire by the bitter wells and exchange stories of the days that are gone.

That is Mr. Casey at his best. Often he equals it, and often falls below it. Genuine visualisation and *cliché* are inextricably mixed. You must take the good with the bad. But you are unwise if you do not read Mr. Casey. True, one has nearly to stop dead when one reads such sentences as this, of the place which the author spells Kadamain:—"And there in the golden glare the realm of Harun the Insomniac comes suddenly to life." This is the purest "caption" writing. But Mr. Casey can write jazz convincingly. Listen to the wailing of his violins over Karbala and Muharram: are not the syncopation and the embroidery of the theme intriguing?

The visitor from the West is surprised to note the emotion displayed by the Arab when the reader in the ceremonial quavers over the pages describing how Hussein dying of the thirst cried out for water. Here the reason for the vividness of the re-enactment is not far to seek. Hussein has not been dead more than a thousand years and as a mere religious figure, however important and holy, might be difficult to reconstruct. But the thirst—the terrible danger of the desert—is still here and the sufferings of Hussein and his little son are a poignant, living thing to the sons of Mahomet who have known these things.

The desert lies round about Karbala, grim, expectant—content to wait as it has waited, centuries, æons, to swallow up this town as it has swallowed the other towns that have dared its violence.

Of Mr. Casey's chapters on Baghdad itself there is little to be said, for they are largely a rehash of what has been written elsewhere. But always one is coming across some phrase that stirs the waters of memory. On cities outside Baghdad he sets more ripples spreading than in the capital itself. On Nineveh, for instance:—

The laughter that echoes through the night may be that of the jackal that roams the ruins. Or it may be that of Sargon, the great King, the King of Kings, the King of Assyria, enjoying a joke that probably would be beyond the understanding of a finer and more modern mind.

In fine, Mr. Casey is an engaging guide. His freshness of mind, his eagerness, his power of absorption, for all his occasional lack of discrimination—these are qualities which weight the scales inevitably in his favour. His

enthusiasm is certainly beyond that of the professional writer of books, of the professional seeker after "copy." And because of it, his style, his tricks of presentation, his harmonic formulæ can just be forgiven him. That pardon granted, and his book will become the jolliest of companions.

It ought to be added that Mr. Casey's thirty illustrations, by no means all of which are hackneyed, are extremely well produced.

SHIKAR MEMORIES.

"SPORT AND WILD LIFE IN THE DECCAN." By Brigadier-General R. G. Burton. Illustrated. (London: Seeley, Service and Co. 21s. net.)

This worthy scion of a sporting family well known for its exploits in Southern India has put together a pleasantly written and modest account of his many meetings with tigers, leopards, bears and bison in the forests and jungles of the Deccan, mainly in the northern parts. These encounters were on foot and even General Burton's skill did not avail to save him from at least one severe mauling. There is a faint trace of melancholy in the story of deeds thirty to forty years old, when sport in India was sport, and hard work and skill were sure to meet their reward. It is all very well to say that sport is still to be had in India in plenty by the man blessed with leisure and money. But this will hardly comfort the hard-worked and poorly paid British officer of the present days. General Burton's were the good old days of the famous Hyderabad Contingent, to which he had the honour of belonging. Alas! it too has gone and is now little more than a memory, like those of the campaigns of Wellesley, which the author skilfully works into his book.

Not only are we given very numerous accounts of shikar incidents (for the author had more tigers and leopards to his credit than most of his contemporaries), but also much interesting forest lore and many sketches of the jungle villagers are interspersed. The book will be read with interest and pleasure by all sportsmen who know the Deccan, and will certainly appeal to the greater public who delight in good writing on the subject of sport. The illustrations are mostly excellent, and the wild animals depicted are shown cleverly posed so as to appear as nearly as possible in natural attitudes and in natural surroundings.

THE WEEK AT HOME

London, Tuesday Morning.

Aliens.

An interesting debate took place in the Commons last week on the subject of the entry of aliens into this country. At present, of course, the regulations concerning aliens are those of the Act of 1919, which was largely influenced by the exigences of the War. Now the Labour Party (and presumably the Liberals also) suggests that this Act is contrary to the traditions of Great Britain, and that equal liberty of asylum, whether provided to reactionary or to revolutionary, ought to be given to refugees.

The Home Secretary, however, would have none of this, and claimed that he had already excluded many persons of an obnoxious type. The trouble is that the Labour Party complain of his definition of obnoxious. Revolutionary tendencies can mean more than one thing, although it is natural enough for Conservatives to imagine that all revolution must be directed against the things for which they stand.

But the problem is, I think, a little deeper than either Labour man or Conservative would care to make it. Undoubtedly the present regulations are open to abuse; undoubtedly mistakes have been made under them. But that is no argument for a wholesale opening of the shores of Great Britain again to the type of man, who, when he has become a British citizen, is not prepared to undertake the whole duties of his new citizenship. Pah! A relic of the military mind, you say? Well, and what if it is? The benefits which such men can bring to this country by no means outweigh the disadvantages. And as for the political refugees, it certainly is a pity that their opinions should be subjected to the determining scrutiny of the Home Secretary; but, on the whole, would Great Britain be so very much the gainer by the promulgation of their ideas in this country? Theoretical sympathy with the alien is one thing, but its practical application, like so many things in the old Liberal programme, is another. In the country at large I should very much doubt whether a demand exists for the loosening of the restrictions which hinge about the entry of aliens into this country.

England and America.

It is with considerable justification that some of the wisest heads of our time are displaying anxiety over the present relations between England and America. The politicians, of course, are trying to make party capital out of the matter—as if under a Liberal or a Labour

Administration Englishmen would better understand the American nation, and *vice versa*. The truth is, however, that neither nation understands the other; and will not do so until the essential fact is realised that the two nations are foreign to each other, and all this absurd talk about common blood, the descent from the Anglo-Saxons, and the rest of it, is deliberately put on one side.

But quite obviously Anglo-American relations are not satisfactory. The ordinary Englishman may be able to get along well enough, even splendidly, with the ordinary American, but officially one encounters jars at every turn. Largely the difficulties derive from the War, about which there are fundamental disagreements which will not be resolved by the mere reiteration of them. The only thing to do is to attempt to get inside the other fellow's skin—a process in which many of the best Americans, although, unfortunately, not their most highly placed—are indulging. If the present ignorant and dangerous talk is continued on both sides of the Atlantic, there will never be real comfort in our post-War world. For the Englishman, who, speaking with knowledge and responsibility, enumerates America's shortcomings, I have admiration; but the prejudiced ignoramus who indulges in "anti-Yank" tirades is more than a nuisance. Luckily, however, he does not seem to count for so much over here as does his counter-part in America. A speech such as that made by President Coolidge on Armistice Day is absolutely inconceivable here; and a more theatrical nation than the British would have become badly rattled by it.

The Gale.

The chief topic of the conversation of almost everyone during the week-end was the gale which suddenly tore down on us last Friday. Trees and hats and glass windows and slate roofs and hoardings and telephonic lines went flying, and there was hardly a place in the country which did not suffer at least some minor damage. On Tower Bridge, for instance, men could not walk singly: they had to link arms. One man on a horse cart passing over the Bridge was blown clean off. And, of course, in many parts of the country there were fatal accidents.

Now before this year one had imagined that such things were simply not done in England. We knew that winds existed in such queer places as Asia and Africa; one had even encountered them in the barbarian North—Scotland. But that the South of England should ever be violated in this way had not entered into our calculations. But this year, it is obvious that anything may happen. There is nothing in the way of extremes that 1928 has not suffered.

Monosyllabism.

The Englishman's love of the English language is not so intense as the Frenchman's love of the French language, despite the fact that he has the finest literature in the world. He is, nevertheless, sufficiently interested to be brought up with a start when he is told, as he was told by a Danish Professor at a meeting of the British Academy recently, that we are fast tending towards monosyllabism.

Professor Otto Jespersen says that we are imitating the Chinese in our predilection for short words. Not only do we deliberately abbreviate (as in our slang, e.g., "lab.," "maths.," "ad.") but we also introduce monosyllabic words whose parentage is unknown, such as "stunt" or "dud." And he concludes that English in the future may become a language largely composed of short words spoken with a rapid, staccato utterance.

The generalisation is rather a dangerous one. The evidence which the Professor adduces is sound enough; he might even have elaborated it, and said that many men who command good English, from Swift to Mr. Baldwin, favoured the short or Saxon word. But is there not a counter-current also? Is not Science, for instance, helping to counter-balance the popular tendency to monosyllabism? I do not really think that there is any discovery on the part of the worthy Professor.

The Aga Khan left the Ritz Hotel last week for Paris.

Prince Ali Khan left London last week for the country.

Sir Bamfylde and Lady Fuller will leave Marseilles on November 30 for a visit to India.

The Roumanian Minister and Mme. Titulesco arrived in London on November 18 from Bucharest.

Viscountess Inchcape, who has greatly improved in health after a stay of six months at Glenapp, returned to London on November 18.

Lady Stavridi and Miss Ione Stavridi left London on November 13 for Athens, and will be away until Christmas

Sir Malcolm Watson left London on November 15 for Bombay, embarking at Marseilles on the s.s. Kaiser-i-Hind.

The Nawab of Bhopal, who recently paid a brief visit to this country, has accepted an invitation of the Council of the East Indian Association to become a Vice-President.

Lady Emily Lutyens will hold a reception at 13, Mansfield Street this afternoon (Thursday) at 5 o'clock, to discuss "How best we may strengthen the hands of the women of India who are trying to spread the knowledge of health and hygiene in the villages of India."

Lord and Lady Strickland, Lady Sybil Smith, and Lady Barrat left London on November 15 by special train to embark on the P. and O. liner Kaiser-i-Hind at Marseilles. Other passengers included Sir D'Arcy Lindsay, Sir Dorabji and Lady Tata, and Sir Jamsetjee Jeejeebhoy.

Professor Margoliouth, Laudian Professor of Arabic in Oxford University, will lecture to the Near and Middle East Association on November 30, at 8.30 p.m. upon "The Quran." The meeting will take place, by kind permission of the Dowager Lady Boyle, at 64, Queen's Gate, S.W.; and Lord Meston will preside.

The Maharaja of Jodhpur gave a luncheon party at Claridge's Hotel on November 13, when his guests included the Maharaja of Kashmir, the Jam Sahib of Nawanagar, Major-General Sir Charles MacWatt, Sir Robert Holland, Captain T. Prithi Singh, Rao Jaja Narpal Singh, Colonel and Mrs. Waddington, Maharaj Ajit Singh, Mr. and Mrs. J. W. Young, Mrs. Stirling, and Rao Jaja Abhey Singh.

THE CHURCH OF ST. GEORGE AT TROODOS, CYPRUS.

WANTED!

A permanent church on Troodos for the needs not only of residents (military and civilian) but of the visitors who are coming in growing numbers each year to this popular hill station of the Near East.

It is proposed that a stone building be erected on a site, to be allocated by the War Office, near the Parade Ground, at a cost now estimated at £800.

The Special Committee includes H. L. Jones, Esq., Major L. F. Layton, O/C Troops, Norman Petrides, Esq., Dr. A. H. Unwin, Henry Williamson, Esq., and the Chaplains of Nicosia (Rev. H. Buxton) and of Limassol (Rev. L. Lindsay).

The Managing Director of the Cyprus Asbestos Co. has kindly promised a generous cash contribution and also building materials produced by the Company at exceedingly low price.

Contributions should be sent direct to the TROODOS CHURCH FUND, c/o H. L. Jones, Esq., Ottoman Bank, Nicosia.

NEWS IN BRIEF.

Definite results of the Greek census show a total population of 6,204,684. There are 52,214 more women than men.

In Congregation at Oxford University on November 20 it was proposed to confer the degree of M.A. by decree upon Mr. Charles N. Seddon, honorary M.A. Balliol, Lecturer in Persian and Marathi; and Mr. Edward J. Thompson, honorary M.A., Lecturer in Bengali.

The ratifications of the Nettuno Conventions and of the Belgrade Convention signed by Italy and Yugoslavia in 1925 were exchanged in Rome on November 14, the Conventions becoming operative as from the following day.

Tewfik Diab, Editor of the Egyptian Opposition newspaper *Wadinnil*, was arrested in Cairo on November 15 on a charge of delivering an inflammatory speech at a Wafd meeting earlier in the week.

M. Ponsot, French High Commissioner for Syria, has agreed to release £L400,000 in gold as the Lebanese Government's share of Syrian Customs receipts, provided that the money be utilised for economic schemes. The Lebanese Government has agreed to devote it principally to irrigation.

One of the first measures introduced by the new Roumanian National-Peasant Cabinet has been the limitation of the number of official motor cars to one per Minister, as the result of which nearly 170 cars will shortly be sold by auction; it has decided to abolish the censorship, and also martial law, except within a radius of about six miles along the frontier. The jurisdiction of military courts is also to be abolished.

Tuesday Morning.

Bulgarian Stabilisation Loan.

On another page in this issue will be found the prospectus of the Bulgarian Stabilisation Loan which is being issued under the auspices of the League of Nations. The total amount of the loan is £5,000,000, consisting of £1,800,000 in sterling bonds, £1,500,000 of which are being offered in this country, the remaining £300,000 being offered in Czechoslovakia and Holland, 130,000,000 francs in French franc bonds, which are being issued in France, and dollar bonds of the amount of 13,000,000 dollars, which are being offered as to 9,000,000 dollars in the United States, the balance being issued in Belgium, Italy, and Switzerland. The British part of the loan is a $7\frac{1}{2}$ per cent. issue at 96 in bearer bonds in denominations of £100, £500, and £1,000, with half-yearly coupons attached. Payment of both principal and interest is to be in sterling without deduction for any present or future Bulgarian taxes, or stamp duties, etc., and the loan is redeemable at par on or before November 15, 1968, by an accumulative sinking fund which will be applied half-yearly by drawings at par, the first drawing being in respect of the half-year ended November 15, 1929. The payment of the principal and interest on the loan is the direct obligation of the Bulgarian Government, which has agreed to allot as security for the bonds receipts obtained from all import and export duties, including *ad valorem* taxes, bonding, statistical and sealing charges and other customs charges and such other revenues as may be assigned if at any time the yield of the above revenues should fall below 150 per cent. of the annual sum required for the service of the loan. The Bulgarian Minister of Finance, in a letter given with the prospectus, points out that the receipts of the revenues allocated to the loan are estimated on the basis of last year's yield to cover the service of the loan about four times. The terms of the issue are undeniably attractive, and it would be surprising if there were not the usual heavy subscription to which we are accustomed in the case of loans issued under the auspices of the League.

The Greek Loan.

The negotiations for a loan for productive works which have been in progress for some time between the Greek Government and Hambros Bank and the Seligman group are understood to have reached a successful conclusion, and the amount of the loan which is £15,000,000 will be provided equally by the two groups. It is reported that the loan is to take the form of the opening of credits as the Greek Government takes the view that the time is not opportune for the conclusion of the whole loan. The first instalment is to be £2,500,000 which will suffice, it is estimated, for the preliminary works of draining the Strymon Plain and of road construction as well as for the continuation of the work of draining the Axios Valley.

Roumanian Loan Negotiations.

I suggested last week that it was not improbable that the Maniu Government might think it advisable to continue the recent loan negotiations rather than face the long delay that would be inevitable in the event of the

League of Nations being approached for the issue of a loan under its auspices. The step has been taken. The group which was negotiating renewed its offer, and the successful conclusion of the negotiations is now announced. Thus one of the chief problems of the Maniu Administration has been solved at the outset, and the Government will now be free to turn its attention to other pressing questions. I have already commented on the declared policy of the National-Peasant Party with regard to foreign enterprise in Roumania, and the steps taken to translate this policy into action will be keenly awaited. Obviously it is essential, in order to restore confidence in the country abroad, to modify the laws introduced by the late Administration—particularly, of course, the Mining Law. Once that is done, and foreign capital is once again free to assist in the development of the country, it will be possible to anticipate a rapid improvement in conditions.

Sudan Cotton Growing.

Some details were given by Mr. MacIntyre at the meeting of the Sudan Plantations Syndicate which bring into clear relief the scope of the work which the company is undertaking in the Sudan. The development of the area under cultivation has entailed the construction of over 4,000 miles of subsidiary canals and over 8,000 miles of field channels, and by the end of this year it is hoped to complete the canalisation of the whole area, which will bring these totals to 4,600 miles of subsidiary canals and 9,300 miles of field channels. Further, the company has made locally over 28 millions of bricks for buildings and has manufactured thousands of tons of lime, and these things and other building materials have had to be transported over long distances. These things have only comprised a part of the work entailed in the development of the Gezira, the success of which undertaking has made the progress of the company one of the romances of commerce of this century.

Manchester and the Sudan.

The work of the Syndicate has two important aspects—the furtherance of the development of the Sudan and the provision of adequate supplies of cotton for Lancashire—and in regard to both it is on the way to achieving an outstanding success. For the Sudan the work of the Syndicate means, and will mean to an increasing extent in the future, a variety of benefits. There is the employment of labour, naturally, but outside that there are a number

KINGDOM OF BULGARIA

7½% STABILISATION LOAN 1928

UNDER THE AUSPICES OF THE LEAGUE OF NATIONS

Issued with the approval and the authorisation of the Council of the League of Nations and with the consent of the Reparation Commission and of the Inter-Allied Commission established under Article 130 of the Treaty of Neuilly.

The Protocol drawn up in accordance with the recommendation of the Financial Committee after approval by the Council of the League of Nations, was signed at Geneva on March 10, 1928, by the Bulgarian Finance Minister and deposited with and registered by the Secretariat of the League of Nations. The further report of the Financial Committee increasing the net total of the Loan to £5,000,000 and dated September 5, 1928, was approved and adopted by the Council of the League of Nations by Resolution dated September 17, 1928, and the Additional Act was signed by the Bulgarian Finance Minister at Geneva on September 8, 1928. The Protocol was accepted by the Sobranie by Act dated April 13, 1928, and promulgated by Ukase No. 14 dated May 4, 1928. The Additional Act was accepted by the Sobranie by Act dated September 27, 1928, and promulgated by Ukase No. 19 dated October 2, 1928.

The terms and conditions of the Loan were approved in accordance with the Protocol by the delegates of the Financial Committee of the League of Nations on its behalf on November 16, 1928, and were accepted by the Sobranie by Act dated November 15, 1928, and promulgated by Ukase No. 22 dated November 16, 1928.

The Loan will consist of Sterling Bonds limited to £1,800,000, French Franc Bonds limited to Fcs. 130,000,000 and Dollar Bonds limited to Dol. 13,000,000.

OFFER AT

£96 per cent.

OF

£1,500,000 7½% STERLING BONDS TO BEARER

(The remaining £300,000 Sterling Bonds are being offered in Czecho Slovakia and Holland, the French Franc Bonds in France and Dol. 9,000,000 of the Dollar Bonds in the United States of America, the remaining Dollar Bonds being offered in Belgium, Italy and Switzerland).

INTEREST PAYABLE MAY 15 & NOVEMBER 15

The Sterling Bonds will be to Bearer in demoninations of £1,000, £500 and £100 with half-yearly Coupons attached.

Payment of Principal and Interest is to be made in Sterling without deduction for any present or future Bulgarian taxes, stamp duties, impositions or charges whatsoever at the offices in London of THE OTTOMAN BANK, J. HENRY SCHRODER and Co., and STERN BROTHERS.

The Loan is redeemable at par on or before November 15, 1968, by an Accumulative Sinking Fund of 0.433 per cent. per annum to be applied half-yearly by drawings at par. The first operation of the Sinking Fund will be in respect of the half-year ending November 15, 1929. The Bulgarian Government reserves the right to redeem at par on November 15, 1938, or on any interest payment date thereafter the whole or any part of the Bonds then outstanding upon giving six calendar months' previous notice.

Payment of Principal and Interest on the Sterling, French Franc and Dollar Bonds is the direct obligation of the Bulgarian Government and in accordance with the Protocol the Bulgarian Government with the approval of the Inter-Allied Commission and the Reparation Commission has undertaken to furnish as security for the Bonds the following revenues:—

(a) Receipts obtained from all import and export duties including ad valorem taxes bonding statistical and sealing charges and other customs charges.

(b) Such other revenue or revenues, if any, as may from time to time be assigned if at any time the total yield of the above mentioned revenues should fall below 150% of the annual sum required to meet the service of the Loan. The Inter-Allied Commission, established under Article 130 of the Treaty of Neuilly, has undertaken to release, at the request of the Council of the League, from the charge laid down in Article 132 of the said Treaty, such additional revenues as may be sufficient to assure the immediate restoration of the yield to the above percentage and such additional revenue so released is to be forthwith assigned to the service of the Stabilisation Loan.

As appears from the accompanying letter of the Bulgarian Minister of Finance the amounts realised from the revenues mentioned under (a) above are estimated on the basis of last year's yield to cover the service of the Loan over four times; these revenues for the last two completed years are stated in the said letter to have been 1,208 million Levas and 1,281 million Levas respectively, equivalent (at 675 Levas = £1 sterling) to about £1,700,000 and £1,900,000 respectively while the estimate for 1928/9 is 1,245 million Levas, equivalent to about £1,840,000.

All the above-mentioned revenues are to be paid into a Special Account which will be under the sole control of the Commissioner appointed by the League of Nations and in due course of the Trustees who will be appointed by the Council of the League of Nations at its next Session to represent the interests of the Bondholders. Out of this Special Account there are to be remitted monthly to the Bankers in London and Paris and to the Fiscal Agents in New York respectively or as they may direct, for account of the Trustees, the proportionate sums applicable to the service of the Loan.

THE OTTOMAN BANK, J. HENRY SCHRODER & CO. AND STERN BROTHERS

offer for sale the above-mentioned Sterling Bonds at the price of £96 per cent. payable as follows:—

£ 5 per cent. on Application.	
£15 " " " November 29, 1928.	
£20 " " " January 7, 1929.	
£20 " " " February 11, 1929.	
£36 " " " March 18, 1929	

Total £96 per cent.

Payment in full may be made on November 29, 1928, on January 7, 1929, or on February 11, 1929, under discount at the rate of 2½ per cent. per annum.

If a smaller amount of Bonds be allotted than that applied for the balance of the deposit will be appropriated towards the amount payable on November 29, 1928, and any surplus then remaining will be returned. In case no allotment be made the deposit will be returned without deduction; failure to pay any instalment when due will render the previous payments liable to forfeiture and the allotment to cancellation.

Provisional Scrip Certificates to which will be attached a Coupon for £2 os. 6d. per £100 nominal payable May 15, 1929, representing interest at the rate of 7½ per cent. per annum on the several instalments from their due dates of payment will be issued in exchange for Letters of Allotment.

Provisional Scrip Certificates when fully paid will be exchanged in due course for Definitive Bonds with half-yearly Coupons attached. The first full Coupon will be payable November 15, 1929.

A brokerage of ½ per cent. will be paid on allotments made in respect of applications bearing the stamp of a recognised Banker or Broker.

Application will be made to the Committee of the Stock Exchange London for permission to deal after allotment. An official quotation will be applied for in due course.

Copies of the General Bond securing this Loan, of the Resolutions of the Council of the League of Nations dated March 10, 1928, June 9, 1928 and September 17, 1928, of the Protocol and Additional Act signed at Geneva on March 10, 1928 and September 8, 1928 respectively by the Bulgarian Finance Minister, of the Resolution of the Inter-Allied Commission dated September 24, 1928, and translations of the Act of the Sobranie dated November 15, 1928 accepting the Protocol and Ukase No. 22 dated November 16, 1928 promulgating the same may be seen at the offices of Slaughter and May, 18, Austin Friars, E.C.2, during business hours whilst the List is open.

Prospectuses and Forms of Application may be obtained at the offices of THE OTTOMAN BANK, J. HENRY SCHRODER AND CO. and STERN BROTHERS.

OTTOMAN BANK
J. Henry Schroder and Co.
Stern Brothers

November 16, 1928.

GENTLEMEN,

I have pleasure in giving you below the following information regarding the KINGDOM OF BULGARIA 7½ PER CENT. STABILISATION LOAN 1928.

A delegation of the Financial Committee of the League of Nations consisting of Sir Otto Niemeyer, G.B.E., K.C.B. (Chairman), M. Alberti, M. le Comte de Chalender, M. Janssen and Dr. Pospisil visited Sofia recently to investigate plans for the financial reconstruction of Bulgaria through the issue of a foreign loan.

A Protocol summarising the scheme for this Loan was prepared by the Financial Committee and was approved by the Council of the League of Nations and immediately signed on behalf of Bulgaria after a definite agreement on all questions including the transformation of the Bulgarian National Bank, had been reached in March 1928.

Previous to this agreement the Customs revenues which were to be allocated as security for the new loan were subject to two charges:—

(a) Under Article 132 of the Peace Treaty of Neuilly Reparations payments and other Treaty obligations were secured by a general charge on all Bulgarian State assets and Revenues.

(b) By two Protocols signed at Sofia on March 21, 1923 and March 28, 1924 respectively it was agreed between the Bulgarian Government and Inter-Allied Commission that Reparations payments and cost of occupation should be secured by a specific charge on the Customs.

In order that the security for the new Loan should be a first charge on these custom revenues it was necessary that they should be released from the above-mentioned existing charges. This object was accomplished by a resolution of the Inter-Allied Commission of September 24, 1928 excepting in favour of the new Loan the customs duties and if necessary other revenues from the general charge for reparations and other Treaty obligations; moreover by the same resolution the specific charge on the Customs for reparations and costs of occupation was subordinated to the new loan and the necessary approval of the Reparation Commission was given on October 6, 1928.

The Disconto Gesellschaft, Berlin, which had made a contested claim to a charge on the Customs, has subordinated in favour of the new Loan any charge which it may have.

PURPOSES:

The amount of the Loan authorised by the Council of the League of Nations is £5,000,000 net, mainly for the purpose of enabling the Government to stabilise the currency, more than half of the Loan being earmarked to reinforce the Bank of Issue and to pay off Budget arrears.

The Proceeds of the Loan will be allocated approximately as follows:—

National Bank	£1,500,000
Agricultural Bank	500,000
Central Co-operative Bank	150,000
Budget arrears	1,100,000
Means of communication	1,250,000
Earthquake expenditure	500,000
Total	£5,000,000

Firstly, the Bulgarian National Bank will be repaid a considerable part of its advances made to the State or to the Agricultural and Central Co-operative Banks (State Banks) or made under the guarantee of the State.

Secondly, new working capital will be provided for the Agricultural Bank and for the Central Co-operative Bank, thus rendering these institutions sufficiently liquid.

Thirdly, the Budget arrears amounting to £1,100,000 as established in the Report of the Financial Committee, will be paid off. The Government has undertaken to carry out any reforms necessary to attain equilibrium of the Budget.

Quarterly reports will be made by the Bulgarian Government on its financial situation to the Council of the League of Nations for a period of five years.

Fourthly, £1,250,000 will be expended on communications in accordance with the detailed proposals of M. Regnault, which received the general approval of the Council of the League on June 8, 1928. This sum will be divided as follows:—

RAILWAYS:	Leva:	Leva:
Upkeep	239,233,000	
Improvements	329,255,000	
Construction of new lines	72,312,000	640,800,000
PORTS		31,500,000
ROADS		172,700,000

Total 845,000,000 = £1,250,000 about.

*The Commissioner, M. Charron, appointed by the Council of the League of Nations will supervise expenditure under this heading. Fifthly, £500,000 is to be devoted to repairing damage caused by the recent earthquakes, subject to the approval of the Commissioner.

Transfers may be made on the authority of the Financial Committee of the League of Nations from one heading to another, if any part of the above appropriations to the last three items remains unexpended.
The Statutes of the Bank have been amended in accordance with the recommendations of the Financial Committee of the League of Nations and M. Charron has been appointed the technical adviser at the Bank on the nomination of the Council of the League.
The Bulgarian Government has undertaken to protect the independence of the Bulgarian National Bank from any political influence whatsoever and has undertaken to effect the transformation of the Bank into an independent corporation with a private capital at a date to be fixed by agreement between the Council of the League of Nations and the Bulgarian Government.
Stabilisation of the Bulgarian currency on a gold basis will be carried out as soon as the Loan is issued and all restrictions on the foreign exchange market will be removed six months later or within such further period as may be approved by the Adviser to the Bulgarian National Bank.

SECURITY :

The Loan is secured by a first charge on the Customs duties, the yield on which for the financial years 1926/27, 1927/28 and the estimated yield for 1928/29 are as follows :—

	1926-27 RESULTS (Leva 000,000's omitted)	1927-28 RESULTS (Leva 000,000's omitted)	1928-29 ESTIMATES (Leva 000,000's omitted)
Import duties, etc.	973	1,087	1,050
Export duties, etc.	138	108	105
Ad valorem taxes	23	19	20
Bonding, statistical and sealing charges, and other Customs charges	74	67	70
Total	1,208	1,281	1,245
Equal at 675 Leva = £1 Sterling to approximately	£1,790,000	£1,900,000	£1,840,000

The yield of these duties is sufficient to cover the service of the Stabilisation Loan over four times.
If at any time the total yield of the above-mentioned revenues should fall below 150 per cent. of the annual sum required to meet the service of the Loan, the Inter-Allied Commission established under Article 130 of the Treaty of Neuilly has undertaken to release at the request of the Council of the League from the charge laid down in Article 132 of the said Treaty such additional revenues as may be sufficient to assure the immediate restoration of the yield to above percentage, and such additional revenues so released shall be forthwith assigned to the service of the Loan.
The Bulgarian Government has undertaken that the proceeds of the Loan shall be applied only for the purposes specified in and in strict accordance with the terms of the Protocol and further that all monies received from the issuing houses shall be paid into such accounts as may be requested by the Bulgarian Government with the consent of the Commissioner appointed by the Council of the League of Nations.
I remain, Gentlemen,
Yours very truly,
WL. MOLLOFF,
Minister of Finance.

of directions in which the Sudan is benefiting. For one thing there is the increase in the country's grain and fodder crops, while the Gezira area now enjoys a regular water supply. Then in the picking season the Gezira offers a plentiful field for casual employment, and it is noteworthy that last season, though the conditions in the outside areas were good, thousands of people arrived with their families and flocks to work in the Gezira. It is scarcely necessary to point out the importance of the work of the Syndicate to Lancashire. The way in which Sudan Sakel is readily taken on the Liverpool market shows that a need is being filled, and indicates further that when the output of cotton from the Sudan reaches more substantial dimensions there is not likely to be a serious problem as to its disposal.

Trade Barriers.

It is now a good many months since the meeting at Geneva, under the auspices of the League of Nations, of the World Economic Conference, when among other things attention was specially devoted to the adverse effect on trade of restrictions of any kind. The influential meeting of business men last week at the Mansion House, under the presidency of Sir Hugh Bell, to support the recommendations, served as a very timely reminder of the very slow progress that has been made in giving expression to the views of the Conference. As a matter of fact, as regards trade barriers the position has steadily grown worse in many directions since the Conference, and if in some cases duties have been reduced, in others they have been increased. A casual study of the various official journals will show that not a week passes without changes in regulations governing trade, and the trend of them is not in the direction of freer commerce. Every nation, it has to be remembered, has its own particular problems, the solution of which may not be to the common weal. Great Britain, for instance, has found safeguarding necessary for a number of industries, and this principle is to be extended next year if the Government receives a further mandate. It is a trade barrier which is deemed to be essential for this country, and other countries could no doubt make out an equally good case for their restrictive regulations. Things look differently viewed from the Olympian heights of Geneva from what they do regarded from Downing Street, the Quai D'Orsay, or Angora, and very naturally so, and that is why I think that the resolution passed at the meeting requesting the League to urge on the Governments concerned the necessity for carrying out the recommendations of the Conference in favour of a substantial reduction of tariffs with the least possible delay is not likely to carry us much further.

Motors in Abyssinia.

The motor has now come to be in a way the spearhead of civilisation, and it is natural that a region like Abyssinia with no communications worth speaking about, though roads are now beginning to receive attention, should come in for special consideration as a possible outlet of some importance for motors. There are, as a matter of fact, quite a number of cars in the country now. At June 1 last 287 motor cars, 18 lorries, and 25 motor cycles were registered in the country. I am indebted for these figures to an official American report, the tenor of which is that Abyssinia is a good potential market for motor cars. Obviously it is if the road programme is pursued, and it may be hoped that the Americans will not be allowed to carry off all the business unopposed, and that British firms which produce cars with a good clearance will also interest themselves in the market. Whether the Abyssinians in the long run will bless the motor car and motor cycle for which they are now apparently showing enthusiasm is a moot point. Perhaps if motoring in Abyssinia ever reaches the stage of development with which we are familiar, the inhabitants of Ethiopia may wish that one of the greatest achievements of civilisation had passed them by.

Sudan Trade Development.

The figures for the trade of the Sudan for the first eight months of this year show that the improvement noticeable a few months ago has continued. The value of the total trade for the period was £E9,561,991, which represents an increase of £E930,088 on the corresponding figures in the previous year. With the sole exception of Government imports, which show a decline of £E102,360, there is an increase more or less substantial in respect of every category. The principal increases are in respect of exports, which at £E5,095,821 are £E582,240 up, and public imports, the total for which is £E2,730,052, an increase of £E324,565. Cotton was mainly responsible for the increase in the value of the exports, the prices realised having more than counterbalanced the reduction in the crop. As regards public imports, mention may be made of the increase in the trade in cotton piece-goods, while other notable increases are in respect of metals and metalware, machinery, and tobacco, cigarettes, etc. The rapid recovery of the Sudan's trade following a good crop of dura is very notable.

COMMENTATOR.

GREEK 7 PER CENT. REFUGEE LOAN.

The yield of the assigned revenues on the 7 per cent. Refugee Loan for September and the first nine months of this year is as follows:—

	New Revenues Drachmæ	Old Revenues Drachmæ
September, 1928 ...	78,195,041	.. 220,697,144
Increase or decrease	+2,392,461	... —56,015,465
Jan.-Sept. 1928 ...	668,557,514	... 2,288,910,929
Increase ...	+28,186,911	... +178,567,698

The Loan has a first charge upon the new revenues and also upon the surplus from the old revenues after satisfying prior charges upon the latter. In 1927 these prior charges were estimated to absorb 40 per cent. of the old revenues, but official information has now been received from Athens to the effect that the said charges amounted for that year to 32 per cent. and are estimated for 1928 at 29 per cent. Taking them at a round figure of 30 per cent. the security available for the Refugee Loan for the first eight months of 1928 would be Dr.2,270,795,165, which, at the fixed and stabilised rate of exchange of Dr.375 per £1 is equal to £6,055,453, viz., 8.75 times the ordinary service of the loan, which requires £691,875 for nine months.

On and after November 23 the address of the Johnston Line, Ltd., at Manchester will be 86, Cross Street.

The traffic receipts of the South Indian Railway Company for the week ended October 20 amounted to Rs.11,86,526, making the total from April 1 Rs.3,42,06,022.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 6,800 tons of asphalt required for the year 1929-1930. January 22.

Steam Lorries.—The A/Director-General, Tanzim Department, Cairo, invites tenders for the supply of three steam lorries required for the Department. December 15.

Police Uniforms, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of police uniforms, etc. December 15.

Steam Lorries.—The Ministry of Public Works, Cairo, invites tenders for the supply of three steam lorries. December 15. (D.O.T.)

Scientific Instruments, Etc.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply and delivery of scientific and measuring instruments, wall clocks, etc. December 3. (D.O.T.)

Steel Book Cases.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of 115 steel book cases for the Royal Library in Cairo. December 31. (D.O.T.)

Saddlery, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of various articles such as saddlery, fire-engines accessories, rest-house necessities, leather. November 24.

INDIA.

Steam Pumping Plant.—The Indian Stores Department, New Delhi, invites tenders for the supply, delivery, and erection of steam engines and pumps. December 6. (D.O.T.)

TURKEY.

Field Telephone Wire.—The Direction-General of Posts, Telegraphs, and Telephones, Angora, invites tenders for the supply and delivery of 50,000 metres of rubber-covered field telephone wire. December 18. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, November 29).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, November 28).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, December 1); s.s. Morvada for Colombo, Madras, and Calcutta (London, December 15).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz and Ancona, if inducement. This steamer also closes in Glasgow on November 22 for Casablanca, Gibraltar, Corfu, Bari, Venice, Trieste, and Fiume, also Gruz and Ancona, if inducement (Liverpool November 24, and Swansea 27); s.s. Bantria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow, Swansea, and Liverpool, December 8).

Johnston Line.—S.s. Avimore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 15).

P. and O. Line.—S.s. Rajputana for Bombay (London, December 7); s.s. Behar for Calcutta (London, December 8).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, November 28).

Ellerman and Papayanni Lines.—S.s. Algerian for Algiers*, Smyrna, and Constantinople (Liverpool December 1, Swansea December 1); s.s. Castilian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 1); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 6); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume (Liverpool December 8, Swansea December 13); s.s. Lesbian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna (Liverpool, December 22); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 28). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 20.

The bull movement in industrials appears definitely to be spent. Prices are generally declining, the movement being reinforced by selling in anticipation of the end of the account and restricted contango facilities. The greatest weakness has naturally been shown in speculative securities such as the lower priced gramophone shares, of which the prices are now less out of accord with true values, though in many cases it is still true that prices might reasonably decline further. The reaction has affected British Government securities which had not previously been affected by gold exports. Anticipation of forthcoming conversion loans, however, led to a partial recovery in British funds, the Four per cent. Consolidated Loan being the favourite. Home rails have been dull with prices rather easier. Among foreign railways the chief feature has been the fall in United Havana, which was accentuated by an unsatisfactory dividend announcement.

The Boom in Gramophone Shares.

At a time when the warnings of competent observers that the boom in gramophones could not continue to expand indefinitely appear to have been listened to, it is of interest to have the views on the present situation of the Chairman of the Gramophone Co., Ltd., (Mr. E. Trevor Williams). At the annual general meeting of that company he deplored the fact that the shares of the Gramophone Company had been drawn into the vortex of speculation. As he said the prosperity of the industry in the last few years, as reflected in this year's profits of £1,132,413 in the case of this company, has been very great, and has led to a multitude of companies dealing in all lines of gramophone goods being formed. As has so often been pointed out these companies are mostly exploiting untried processes. Whether these processes will prove commercially successful is at the moment unknown, and their future is not made rosier by the strongly established position of the older companies. These older companies have resources which enable them to keep pace with technical developments and they are prepared to meet fierce competition. In the débâcle which Mr. Williams, in common with other observers, anticipates it is not the old firmly established companies with a record

of sound finance which will go to the wall, but their young untried competitors. As for the Gramophone Company itself, its profits are as mentioned £1,132,413 as against £780,555 last year; the company's previous policy of distributing about 60 per cent. of its profits is continued, the actual rate of dividend being 55 per cent. Contrary to hopes in some quarters there is no bonus distributed this year but Mr. Williams indicated the possibility of such a distribution in the "not far distant" future.

Tea Shares.

For some time past the tea share market has not attracted a great deal of attention. This neglect has no doubt been largely due to the belief that the outlook for the tea industry was less promising than a year or two ago. It is true that until the last few months the price of tea was showing a tendency to fall, so that the average price of Northern Indian tea for the first ten months of 1928 was 1s. 4.25d. as against 1s. 6.82d. in the corresponding period of 1927, while the average price for Southern Indian was 1s. 3.29d. as against 1s. 6.80d. last year. This tendency was not, however, remarkable since the quotations at the beginning of 1927 were abnormally high. Moreover, the tea market has lately presented a rather better appearance. The statistical position, though not very favourable on the surface—the crop being larger this year than last—is actually better than it looks. Shrewd judges of the tea share market are expecting an early revival of public interest in that department of the Stock Exchange, with improving quotations, particularly in the case of companies growing the better quality teas. Among the shares which might be bought for capital appreciation are those of Assam Company, which yield £8 per cent. on the basis of the dividend last paid, Darjeeling Company, yielding £8 16s. per cent., and Lanka Plantations and Upper Assam, which yield £7 15s. and £8 17s. respectively. For investment purposes—for mixing with more stable and less lucrative securities—attention may be drawn to Borelli, yielding £10 18s. per cent., Eastern Assam (£7 6s.), Oovak Estates (£7 8s.) and Spring Valley (£8 9s.). It is well to remember when buying tea shares that they should be bought for the long shot—and not for short periods. The industry is one which is bound to have its up and downs, but over a period of years carefully selected tea shares should show a good return.

The Textile Industry.

The reduction in the interim dividend on Fine Cotton Spinners and Doublers Ordinary shares to 4 per cent., is doubtless disappointing to shareholders. It was not, however, a complete surprise to those acquainted with conditions in the cotton industry. The depression has been particularly severe in the Egyptian department, with which the company is concerned, and it must have seriously affected profits during recent months. There are signs now that the worst has been seen, and of late some improvement has been witnessed. The company, which is exceptionally well managed and has built up substantial reserves, is in a position to benefit as much as any from the least improvement in the cotton trade. It is highly probable that in accordance with its usual conservative policy the company has reduced its dividends fully to correspond with the reduced earnings and has maintained its accumulated resources untouched. When this is considered in conjunction with the bad times through which the industry has passed the level of the distribution cannot be considered unsatisfactory. The investor who holds the ordinary shares of Fine Cotton Spinners will no doubt be well rewarded in the long run; in fact, for some time past there has been steady buying of these shares for investment purposes. The Five per cent. Cumulative Preferred Ordinary shares on which the interim dividend has been maintained at the same figure as last year give the not unattractive yield, for an amply covered prior charge stock, of £5 10s. per cent.

Engineering Topics.

By G. B. B.

Steel Forged Boilers.

The increasing use of extra high steam pressures has demanded a boiler of more robust construction than the usual steel-plate, rivetted type, and this demand John Brown, Ltd., of Sheffield, are meeting with a boiler forged out of the solid steel ingot, without a joint or a rivet in its construction. This is a development of considerable importance in engineering, and a new era in high pressure stream work appears to be opening up. The method hitherto employed for boiler construction has been to roll plates to correctly curved sections, joint them with rivets, fit plated ends to them, and put gusset and other stays in the positions where the greatest strains would have to be met. For a long time it has seemed as though finality had been reached in boiler making, but John Brown and Co., have boldly forsaken the beaten path and evolved an entirely different method. They make the new boilers in two types, the first for what may be called medium steam pressures up to 500 lb. per sq. in., and the second for extra high pressure and high temperature work. Broadly both types are similar except for differences in the end plates. In each case a solid ingot of steel is taken and bored throughout its length, after which by means of delicate light tests and low powered microscopes the ingot is clearly and carefully examined to see that there are no cracks or blow holes that would impair its strength. Homogeneity, so far as the composition of the steel is concerned, freedom from all mechanical defects and a thoroughly uniform composition of the ingot are properties that are absolutely essential in this construction of solid forged boiler work. After the bored ingot has passed, satisfactorily, the necessary tests, it is passed to the forger, where it is expanded and drawn into a weldless tube. In this process, the steel is worked both longitudinally and circumferentially so that the grain of the metal lies in the directions which are most suitable for withstanding the immense pressures which it will be called upon to deal with in service. As soon as the necessary length and diameter are obtained, the process of manufacture alters, according to the type of boiler that is to be made. In the extra high pressure type, the ends of the cylinder are forged in an inward direction so as to form the two ends of the boiler, and this forging work is continued until only a small opening, for a man-hole, is left in each end. This opening may be either in the centre of either or both ends or in any other position in the ends that the designer may specify. In the medium pressure type, the end pieces are separately formed, forced into position, and rivetted in the usual way. In each type the drums or cylinders, before the end pieces are put in place, or forged down out of the solid metal, as the case

may be, are carefully machined inside and out, not only for the purpose of ensuring that the metal is of even thickness throughout but also because it has been found that a machined inner surface is less liable to scale and withstands corrosion better. Already a large number of these boilers, up to 50 feet in length and corresponding diameters, have been turned out by the firm for use, in this country and abroad, in electric power stations, chemical works, oil refineries and other premises where high steam pressures and heavy duties have to be dealt with.

Road Construction.

The use of British granite for road work is becoming increasingly popular now that the performance of some of that material, laid down many years ago, has proved so satisfactory. There are many miles of granite paved roads in this country, which have been down for upwards of 60 years and are still in excellent condition. Londoners will have noted that in Oxford Circus there is a stretch of granite sett paving which is almost as good as new, but it will perhaps be a surprise to them to learn that about 15 years have elapsed since it was laid down. There is another stretch of granite setts in Holborn, which has been down for over 20 years, and is still in excellent condition. Guildford High Street, which has to carry the main London-Portsmouth road traffic, averaging over 10,000 tons daily, is still paved with the original granite blocks laid down in 1867. Considering the heavy duty the roadway is called upon to perform, and considering also that it is on a steep gradient and so has to withstand continuous braking on the part of descending vehicles, this length of life is little short of remarkable. In a recent letter to the Press, Sir Arthur Holbrook gave an extract from a recently-published book, "Modern Road-making," by Mr. Harold Bradley, in which he says they dismiss the subject of the importation of foreign roadstone by merely stating that "there appears to be an increasing tendency . . . to import foreign roadstone." This has evoked a rejoinder from Mr. Bradley, who wrote: "We go a little further than that, for we say that 'The consideration of this policy is outside the scope of this volume, but it should not be forgotten that there is no lack of excellent material available in this country for all classes of road construction.'" The question of the importation of foreign roadstone has its political side which need not be discussed here, as it is, of course, highly controversial. But, economically speaking, with ample supplies of British granite and basalt available, there seems no real need to go elsewhere for our road making material, so far as that class of stone or surfac-

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

ing is concerned. We must, however, defend the British quarry owner from a charge, sometimes levied against him, of attempting to obtain too high a price for his product. The writer has exceptional facilities for learning the prices obtained for both British and foreign stone, and an examination of the figures collected show that the selling prices of British roadstone has not risen in proportion to the increased cost of production between 1911 and 1927. As a matter of fact, the British quarry owner is only too anxious to market his material on an economic basis comparable with all the charges involved.

Near East Markets

CYPRUS IMPORT TRADE.

During the September quarter imports into Cyprus continued to rise in value. The total for July, August and September is £465,417, an improvement of £57,000 over the figure for the corresponding period of last year and £45,600 over that for the second quarter of 1928. Increases were most marked in flour, timber, motor cars, edible oils, and machinery, while fertilizers, cotton yarn and thread, sacks, and sole leather fell off.

Exports totalled £347,734, a decrease of nearly £77,000 as compared with last year and a decrease of £27,500 on the second quarter. Some £18,000 however is represented by specie exported in 1927, and barley (held up for higher prices), carobs, and asbestos account for most of the balance. There are noteworthy improvements in pyrites (£26,100), raw silk (£6,150), hides and skins (£5,070), raw cotton (£3,820), grapes, almonds, and potatoes.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, in their report dated October 25, state:—

Arrivals in Kordofan stations from October 1 to 25 amounted to 102 tons, which is exactly the same quantity as that for the same period last year. The daily average works out, therefore, at 4½ tons.

The market opened at 9d. less than the closing price on September 30, remained steady until the 18th, rose by about 2s. per cwt. for two days, and closed on the 25th at 6d. higher than the price paid on the 1st.

There has been a general revival of demand during October—the United Kingdom, France, and the United States, however, showing little interest.

Stocks are apparently exhausted, and several orders for old crop gum could not be filled owing on the one hand to this absence of stocks and on the other to the smallness of arrivals.

The new crop has not yet started and, as usual, will not start coming upon the markets before next month.

NEAR EAST MARKET REPORTS.

The Monthly Review of Barclays Bank, Ltd., for November contains the following reports on Near Eastern markets for the third quarter of this year:—

Egypt.

During the three months under review, the cotton market has been affected by the seasonal uncertainty of the growing period, the market being almost entirely subjected to crop news. The earlier optimistic views on the American crop have undergone certain modifications and the promise of an exceptionally large crop in Egypt has practically materialised. Prices have reacted to all crop news, authentic or otherwise, and quotations have been most irregular. Sakel cotton at one time touched 32.90 dollars and Uppers 20.60 dollars, but these prices seemed to encourage buying, and with stronger markets for American cotton, due to reduced crop estimates, prices took an upward turn until, at the time of writing, the November futures stand at 34.88 dollars for Sakel and the December (Ashmouni) futures at 22.90 dollars. Trade demand, which during the first two months of the quarter was experienced for almost every variety, has finally concentrated on Ashmouni and, of late, all grades of this growth have been in favour. This preference is easily understood, as Ashmouni was quoted at a premium of only 2½ dollars on American cotton. In fact, the comparative cheapness of Ashmouni has prejudiced the sale of East African and growths of a similar staple. Although the crop has been almost fifteen days late, the movement is very rapid and arrivals are about equal to those of last year. Growers are

anxious to market their cotton as soon as picked, and, consequently, there is a certain amount of congestion in the interior. Crop estimates, which have varied considerably, have finally crystallised around 7,250,000 kantars, as against the final outturn of 6,097,000 kantars last season. The bulk of the increase is in Upper Egypt, where record yields have been obtained.

During the period under review the market for cotton goods has been rather quiet, business being almost entirely confined to fresh arrivals, as buyers showed little interest in old season's goods. Prices have been well maintained.

The Sudan.

Trade in the Sudan for the greater part of the quarter has been slack, but business became brisker during September and was better than in previous years. Rains were plentiful during the first two months, but lessened in September, with the result that crops, especially dura, sesame, and groundnuts, which showed signs of being plentiful, will not be so good as was expected. In fact, it is anticipated that the dura crop will be below the average. There has been a steady demand for gum, but prices were poor and arrivals small. The new crop of Kordofan natural has been offered at 40s. 6d. per cwt. shipment c.i.f. United Kingdom during December/January. The cotton crop has been estimated as 620,000 kantars of Sakel. Of this total, it is expected that the Gezira will yield 500,000 kantars on an area of 131,000 feddans, Tokar 57,000 kantars, and Kassala 48,000 kantars. With the exception of the last mentioned, all figures show an increase over last season's crop. The yield of American cotton is estimated at 84,000 kantars.

Palestine.

The period under review has been marked by commercial depression throughout the country, but with the approach of the winter season business has taken on a brighter tendency. The export of cereals during the quarter was insignificant and large quantities of wheat and sesame were imported from abroad for the milling industry and for the oil presses. Dura is the only promising crop and it is anticipated that there will be supplies available for export. The textile market improved during the latter part of the quarter and a satisfactory volume of business was transacted in woollen goods, while an improved demand for cotton goods was also in evidence. The silk goods market, however, was dull, but an increasing number of new orders is being placed by local merchants. The colonial goods market, which has for some time past been quiet, became more active during September, and it is anticipated that this condition will continue, as importers have covered their requirements to the end of the year.

The prospects for the orange season are good and it is expected that about two million cases will be exported. Prices are now quoted at 11s. 6d. per case f.o.b. Jaffa and 6s. 6d. on the tree. Owing to the opening up of new markets in Germany, Austria, Czechoslovakia, and Hungary, it is anticipated that this season will be better than the two previous ones. Exports to these countries will be easier, as after December 15 the Italian Government will allow oranges to pass through Trieste, a route which in former seasons was prohibited. The outlook in regard to Great Britain is thought to be promising. Arrangements are being made for the fruit to be inspected before export.

Imports into Palestine for the first half of 1928 amounted to £P3,079,533 and exports to £P884,068. Industrial exports are on the increase, owing to the development of local industry. The building trade is showing activity, and new schools, hotels and commercial residential premises are in course of erection.

The Attock Oil Company announces that a further well has been drilled into the 3,900 ft. oilsand with satisfactory initial production.

Company Meeting.

SUDAN PLANTATIONS SYNDICATE.

Continued Development of Undertaking.

Benefits to the Sudan.

Mr. A. MacIntyre's Address.

The twenty-first ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held on November 14 at Winchester House, Old Broad Street, E.C. Mr. Alexander MacIntyre (the chairman of the company), who was enthusiastically received, presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and Gentlemen,—Our syndicate suffered a heavy loss through the death of Sir Frederic Wise, which occurred suddenly in January last. He was a man of great ability, whose advice, particularly in matters of finance, was greatly appreciated by my colleagues and myself. He joined our board in 1916, and we miss his regular attendance at our board meetings.

I beg to apologise for the absence of my colleague, Mr. D. M. Hannay, who is unfortunately prevented from being present owing to indisposition.

As the directors' report and balance-sheet have been in your hands for some time, I presume it will be your wish to take them as read. (Agreed.)

New Chairman.

I joined the Sudan Plantations Syndicate in September, 1906—22 years ago—and, although I have served it as Civil Engineer, Manager, and Managing Director, this is the first time I have had the pleasure of attending an annual meeting and had the privilege of meeting and addressing you.

My co-directors have done me the honour of selecting me to be your chairman.

I feel that, however well I may carry out my duties as chairman, it will be difficult to fill the place vacated by so capable and far-seeing a man as our late chairman, Mr. Eckstein. (Cheers.)

I can only assure you that I shall do my best to serve all your interests.

I am particularly glad that Mr. Eckstein has agreed to remain on the board as deputy chairman, and that the Syndicate will still have the benefit of his wide experience and advice, especially as from time to time I shall have to be away for considerable periods looking after your affairs in the Sudan.

Pioneer Work under Mr. Eckstein.

I should like to convey to those of you who have not been able to see it for yourselves an impression of the pioneer work which has been carried out in the Sudan under Mr. Eckstein's chairmanship, and of the benefits which this work has brought both to the inhabitants of the Sudan and to those who work in the cotton industry in this country.

At Zeidab, our own property, we have developed 14,000 acres, of which 4,000 acres are planted in cotton.

On the Gezira Plain we have developed 396,000 acres of land, of which 131,000 acres are at this moment planted in cotton and 120,000 acres in grain and fodder crops.

On this area the Government has provided the main canal system, and we have completed the subsidiary canalisation for the irrigation of the land and have erected the necessary ginning factories, which include seven large ginning factories containing no fewer than 560 gins, all manufactured in England. This is, I believe, the largest number of gins directly under one management in the world to-day. (Hear, hear.)

We also possess a ginning factory at Zeidab.

We have erected the necessary buildings, dwelling houses, offices,

stores, and light railways and organised the supervisory staff required to run all these and to carry out the intensive cultivation of this vast tract of land.

Work of Canalisation.

The development of the present cultivated area entailed the construction of over 4,000 miles of subsidiary canals and over 8,000 miles of field channels, and by the end of this year we hope to complete the canalisation of the whole area, which will amount to 4,600 miles of subsidiary canals and 9,300 miles of field channels. (Hear, hear.)

For the erection of buildings over 28,000,000 bricks were made locally by the Syndicate and also thousands of tons of lime were manufactured by ourselves, all of which, together with other building material, had to be conveyed for long distances up to 50 or 60 miles and erected all over what was then a waterless plain.

Constant supervision is required to ensure that the proper methods of cultivation and irrigation are carried out during the cultivating season to obtain the best results in every way.

Native drivers and their assistants had to be trained to operate cultivating machinery of the most modern type. The land is ploughed twice over, and this means that on the average we have to plough 1,300 feddans per day from the middle of October to the middle of May.

The ginning factories had to be equipped with a staff of engineers, cotton classifiers, ginning carpenters, checkers, and workmen trained to run the gins and baling presses, together with several thousand men trained to handle the cotton and cotton seed through the factories. The same applies to the running of our light railway and other works incidental to the scheme.

A seed farm has been established to keep up a pure strain of cotton seed and to test such other varieties as seem likely to prove suitable and profitable in the Gezira.

The Government are carrying out all the latest and most up-to-date scientific experiments and research on a research farm situated in the Gezira, to which the Syndicate make a substantial annual contribution. The subjects of the experiments include the prevention and elimination of the diseases and pests to which cotton has been or may be subject in the Sudan, crop rotations, and the reaction of the cotton plant and of the soil to various volumes of water, to different sorts of manures, and to various methods of ploughing and of planting.

The Government has set up public dispensaries on each block of 15,000 acres, so that first aid treatment and medicines are readily available for the whole population on our area.

Improved Position of Inhabitants.

I think that three of the outstanding questions of importance which every country in the world to-day has to attempt to solve are:—The question of wages or profits in connexion with labour; a cheap and ample supply of food; and the reduction of the costs of supplying agricultural products from the field to the consumer.

I think that the question of satisfying the aspirations of the native tenant and worker has been solved by our system of co-operation, whereby the Government, the tenant, and the Syndicate all share in the proceeds of the cotton crop, which means that one party cannot make a profit without the other two participating.

The question of food for man and beast on this area, which in the past, in bad rain years, was often subjected to famine conditions, has been solved by the introduction of irrigation and the annual production of grain and fodder crops on one-third of the area, all of which the tenant gets for himself and his family free, and without any reduction.

The problem of the expensive "middleman" has been eliminated by our Syndicate supplying and carrying out all such services as ploughing, transport, ginning, shipping, and the marketing of the crop at cost. What with his cotton profits and an assured supply of food and fodder, the tenant and worker is vastly better off than ever he was before. (Hear, hear.)

Not the least of the new amenities of life which he enjoys is that drinking water for man and beast is now available all over the area. Consequently, their flocks and herds have increased considerably. In the past indifferent water could only be procured from wells 70 ft. to 150 ft. deep, and it used to occupy almost the entire population of a village most part of the day to draw sufficient water for the daily requirements of themselves and their animals.

Extensive Employment.

These are some of the material benefits which have been achieved, but more than this had to be done to ensure the contentment and well-being of the tenant and native population who do the actual work and upon whose contentment, ability, and success our own success depends.

We have now over 13,000 tenants and their families settled on the land, representing a population of about 100,000 people, all engaged on our cultivation. This does not include those engaged in our ginning factories, light railway, and other occupations arising out of the scheme, which are many.

Human nature is very much the same all over the world. These people have their own ambitions and aspirations, although they may differ somewhat from ours, and it was necessary to build up a supervisory staff whose ability is unquestionable and who also have the

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester.

and FURNESS, WITTH & CO., Ltd., Royal Liver Building, Liverpool

necessary qualifications to treat our tenants and all workers with consideration, sympathy, and tact.

This, I may tell you, was no easy task in so trying a climate as we have in the Sudan, where a young man has to be of sterling quality all through to meet the demands put upon him by the management and by his varied and arduous occupation. I feel, gentlemen, that we have got the right men, and that you have a staff in the Sudan of which you may well be proud.

Cultivation on Up-to-date Lines.

All our tenants had to be taught how to cultivate on up-to-date lines under an irrigation system and to apply the irrigation in detail themselves.

During the picking season a considerable amount of outside labour is required by the tenant and his family for the picking of the cotton crop, and the number attracted from all quarters, especially from the White Nile Province, during the two previous seasons, which were bad rain years in the surrounding areas and provinces, was very satisfactory indeed. Last year was a good rain year, and this, together with our increased areas, made me a little anxious. Much to my surprise, these people arrived in their thousands with their families and flocks, which augurs well for our further requirements in this respect.

The old lady, whose useful days were assumed to be over, finds herself much sought after and able to earn ample money by picking cotton; the young man and maid find it a lucrative field to earn their marriage portion before returning to their own homes, and the old mare camel, whose productivity had ceased owing to poor feeding, again starts to reproduce when fed on succulent fodder—these are some of the things which appeal to the people and attract them.

So much for the work which has been done and for the benefits which have accrued to the inhabitants of the Sudan.

How the industries of this country have benefited you can judge when I tell you that during the last two seasons we have produced and supplied to this country over £7,000,000 worth of cotton and cotton seed, and that practically all our machinery and building materials have been bought in Great Britain. (Cheers.)

I only mention all this to try to convey to you what has been achieved during Mr. Eckstein's chairmanship. (Cheers.)

At this point I should like the secretary, Mr. Bluen, to read to you an extract from the minutes of a board meeting held on October 25, which I am sure you will all heartily endorse.

Board's Tribute to Mr. Eckstein.

The secretary then read the following extract:—

"On his resignation of the chairmanship, the board unanimously resolved to put on record expressions of their high personal esteem for Mr. F. Eckstein, of their keen appreciation of his outstanding services to the Syndicate, and of their recognition of the large measure in which the present success of this enterprise and the contributions which it is now able to make to the contentment of the native population of the Sudan and to the wealth of the Empire are due to the pioneering spirit, perseverance, disinterestedness, and close personal attention with which, from small beginnings and in the face of difficulties, he has guided its fortunes since its formation 24 years ago." (Cheers.)

The Balance-sheet.

The Chairman, proceeding, said:—I will now follow the usual procedure and go through the balance-sheet. Our last issue of 750,000 shares is now fully paid up and the total issued capital is £2,250,000. The share premium account has been increased from £1,256,000 to £1,690,000. We have added this year £50,000 to our Gezira reserve account, and this account now stands at the satisfactory figure of £200,000. Creditors and credit balances are £1,226,000, which is £850,000 less than last year; a considerable portion of this sum has been liquidated since our books were closed at June 30.

On the credit side you will notice that our own property at Zeidab now stands in our books at £130,700, against £139,700 last year. This figure represents a modest valuation of the property.

The headings under Gezira areas show an increase of something over £250,000, and the item stocks, stores, and building material shows an increase of about £47,000. In both cases this is due to our expenditure on work in connexion with the extension of our area. Further capital expenditure will be required this year, including payments for two new ginning factories, which are now nearing completion.

Our stock of cotton at the end of this financial year was £1,712,000, compared with £3,000,000 at the end of June last year. In arriving at the former figure we adopted the same methods as we did last year—that is, we took the full sale price of all cotton sold up to about a month ago, disregarding cotton not yet delivered. The unsold balance we valued, as usual, at what we considered a conservative figure.

Investments.

Regarding our investments in other companies, you already know that the Kassala Cotton Company has given up its old concession and that the Sudan Government has allotted to that company in exchange a new concession and a new area in the Gezira, which I think will prove advantageous to the shareholders. The Kassala Cotton Company is now engaged in developing this new area, and hopes to have a cotton crop planted in July next year. The acreage which it will be possible to plant must depend upon the amount of water which the Government's irrigation department may be able to

make available in time. Our holding of shares in this company remains unchanged.

As regards Brazil Plantations and Parana Plantations, I beg to refer you to the directors' report and to the full statements made by the chairmen of these companies at their annual meetings.

Our financial position remains a strong one, which is necessary in view of the big crops which we are now producing and which we have to finance.

Profit and Dividend.

Our gross profit is, as you will see from the balance-sheet, £833,000, or £69,000 less than the previous year, while our divisible net profits is within a few pounds of last year's figure of £587,000.

Out of this amount we paid you in July our usual interim dividend of 10 per cent., and we propose now to pay you a final dividend of 15 per cent., making in all 25 per cent. for the year.

From the directors' report you will have gathered that we deduct this year from your dividend both Sudan business profits tax and British income-tax at the rate of 4½d. for the former and at the rate of 3s. 7½d. for the latter. The result to the shareholder is that the deduction of these two taxes is a slightly less deduction in amount than that to which he has been accustomed in the past. The explanation of this is that the Sudan tax is charged first and the British tax is only calculated on the balance remaining. The terms of our new agreement are such that we must adhere in future to this arrangement, and I must, therefore, ask you to sanction this resolution.

Past Season's Operations.

During the past season we had in Zeidab approximately 5,100 feddans under cotton, picked 16,458 kantars, and shipped 3,330 bales, all of which were sold at very satisfactory prices through Messrs. Hannay and Co., of Liverpool. In addition, 1,552 tons of seed were shipped and also sold at satisfactory prices.

In the Gezira we had under cotton 105,587 feddans, dura 52,902 feddans, lubia 55,331 feddans. We picked 347,402 kantars of cotton, and shipped 76,900 bales of cotton and 33,703 tons of cotton seed.

Our cotton crop was considerably smaller than last year, owing entirely to exceptional climatic conditions.

Last season, for the first time since we commenced work in the Gezira, we had no cool winter months and almost an entire absence of wind, which is necessary for the proper aeration of the plants. These conditions were favourable to the propagation of pests.

Current Crop Prospects.

Turning to the present season we have under cotton at Zeidab approximately 5,026 feddans, and the crop promises to be a very good one. We have now picked 17,435 kantars and shipped 1,000 bales. These pickings already exceed any complete crop produced at Zeidab in the past, and the result is very satisfactory. (Cheers.)

There is still a fair amount of cotton to be picked, which I hope may bring our average return for the season up to four kantars per feddan.

In the Gezira we have under:—

Cotton	...	...	...	...	131,351 feddans.
Dura	...	...	...	...	65,651 "
Lubia	...	...	...	...	54,580 "

Thrips have been destructive on two of our blocks at the south end of the concession, and some leaf curl has been observed on one block. These pests are generally in evidence in places in good or in bad years.

Reports just received by cable indicate that the crop on the whole is quite promising.

In past years you have been repeatedly informed that it would only lead you astray if at this date an estimate were given of the probable yield, as one can never foretell what the yield is likely to be until the picking stage is reached in the early months of the near year.

The development work for the extension areas is well ahead, and we hope to have the development canalisation and buildings for the whole concession area of 465,000 feddans completed by July, 1929, and if the Government are able to complete their part of the undertaking by supplying the necessary water for this area we should have 155,000 feddans under cotton next year. (Hear, hear.)

This would, of course, be highly advantageous to us, as it would make the increased capital which is sunk in the development of our extended areas immediately remunerative. At the same time I think it only right to remind you that as our area increases the effect will be that our share in the crop will decrease from 22½ per cent. for last year to a minimum of 20 per cent. when the whole area is planted.

Favourable Factors.

Granted reasonable prices for cotton, I have every confidence that the Syndicate should continue to prosper. We have many factors in our favour—a vast tract of land capable of producing long staple cotton of high quality, a suitable climate, a good supply of labour, and an experienced staff.

At the beginning of my speech I told you that I was proud of our staff. I take this opportunity of thanking them all for the zeal and ability they have shown in fulfilling their various tasks, and for the hard work they have done during the past year. As usual, we have again allocated a bonus of £15,000, which I know you will heartily approve of. (Hear, hear.)

I should like to express our appreciation of the efforts of the organisation through which we have sold our cotton—namely, the British Cotton Growing Association—and of the good work which

they have done in obtaining such excellent prices for all our cotton. This, to a great extent, has been achieved by the personal efforts and interest taken by Sir William Himbury, managing director of the association, and by their brokers, Messrs. Wolstenholme and Holland and Messrs. Reynolds and Gibson.

I should also like to record our indebtedness to Mr. Wilson, of Messrs. Campbell and Philipps, Ltd., for the good results which he has obtained in the marketing of our seed, and to the Sudan Government Railways, and to our shipping agents in the Sudan, Messrs. Contomichalos, Darke and Co. and Gellatly, Hankey and Co., for the efficient way in which the transport and shipping were carried out.

I now move: "That the report of the directors and statement of accounts to June 30, 1928, now laid before the meeting, be and the same are hereby received and adopted." I will call upon Mr. F. Eckstein to second the motion. (Cheers.)

Mr. Eckstein's Speech.

Mr. Eckstein, who was received with cheers, said: Allow me first of all, Mr. Chairman, to thank you for the kind and generous reference you have made regarding my past association with our Syndicate, and to thank you, ladies and gentlemen, for the cordial way you have received these remarks.

In the statement of the progress made by the syndicate during the last quarter of a century—in a way almost a romance—the chairman naturally omitted to tell you what I can tell you—that during all that time his was the moving and active spirit, and, if praise is due to anyone, the name of our new chairman must certainly be included. (Cheers.)

In these circumstances shareholders are all the more to be congratulated on his having accepted this new and further responsibility.

Mr. MacIntyre and I have worked together, as he has told you, for more than 22 years in absolute harmony and mutual understanding—we know each other well. What I think of him, what I think of the work he has done in the Sudan, what I think of the admirable organisation he has created in the Gezira, you all are well aware of, having made it abundantly clear in my many annual addresses to you. (Cheers.)

Continuity of Policy.

As Mr. MacIntyre will combine with the chairmanship also the managing directorship in the Sudan, it will be necessary for him to spend a certain amount of time in the Sudan every year, so my colleagues have appointed me deputy chairman. (Cheers.) This will enable me to represent the chairman during his absence abroad, and it will have the further advantage of assuring that continuity of policy which we have been following so consistently for many years. This policy has stood the test of time and is one I have very much at heart.

I am anxious to emphasise what the chairman has said about our able manager, Mr. Poyntz Wright, his second in command, Mr. Archdale, and the staff in the Sudan. No one who has not been on the spot and seen our people at work—be it at head office at Barakat, in the field, in the ginneries, workshops, railways, buildings—can realise the efficiency and zeal shown by all of them, and all this under a grilling hot sun. I want to repeat the deep acknowledgment your board and the shareholders owe them.

I would also like to thank our London staff. Our secretary, Mr. Bluen, with a very small staff, has to go through an immense amount of work every day. He and his assistants perform their duties to our entire satisfaction. (Hear, hear.) We hope to make it possible for him to pay a visit to the Sudan shortly, and so enable him to gain some first-hand knowledge of how the work is done at our headquarters at Barakat. (Cheers.)

At our annual meeting last year I was perhaps over-cautious regarding our dividend prospects for this year.

I spoke advisedly in that sense, but in your interest, because I knew that we had to pay a dividend on a 50 per cent. higher capital, while the percentage of new areas under cultivation would be negligible. Well, ladies and gentlemen, I am happy to say my apprehension did not materialise.

Good Cotton Prices.

Notwithstanding that our yield per feddan was $1\frac{1}{2}$ kantars less than the average of the previous two years, we are able to pay you again 25 per cent., without making use of our carry-forward. You will probably like to know how this was possible. My answer is: Good work rewarded by good luck in the shape of good cotton prices. For this we cannot claim any credit—it was just good fortune.

The chairman has given you a clear and lucid statement dealing with our last year's work, so it is unnecessary for me to say anything more, except to add that our relationship with the various Government Departments in Khartoum is most satisfactory in every way.

I read the other day in a speech made by the Governor-General of the Sudan, in which he praised the work done by our syndicate, that we showed our good sense in never quarrelling with the Government, because we realised that sound policy did not clash with sound business. (Hear, hear.)

This, ladies and gentlemen, is perfectly true, and I have much pleasure in seconding the resolution moved by the chairman. (Cheers.)

Shareholders' questions having been replied to, the motion was put to the meeting and carried unanimously.

The Dividend Resolution.

The Chairman next moved: "That a final dividend be declared payable to shareholders on the register on November 3, 1928, at such a rate as, with the interim dividend paid in July last, will be equivalent to a dividend for the year of 5s. per share (equal to 25 per cent.), less Sudan business profits tax at the rate of $\frac{1}{4}$ d. in the pound, and British income-tax at the rate of 3s. 7 $\frac{1}{2}$ d. in the pound."

The Chairman announced that the dividend warrants would be posted on the 15th inst.

The Hon. Arthur M. Asquith, D.S.O., seconded the resolution, which was unanimously adopted.

The retiring directors (Mr. F. Eckstein and Lieutenant-Colonel S. H. Pollen, C.M.G.) were re-elected; and Messrs. Cooper Brothers and Co. having been reappointed auditors, a vote of thanks to the chairman concluded the proceedings.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at September 30, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000; Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E13,475,938; Egyptian Government, £E15,865,865; Sudan Government, £E213,769; Mixed Tribunals, £E1,892,686; bankers' accounts, £E415,497; cheques and bills payable, £E211,654; sundry other accounts, £E2,013,042—£E39,719,076. Assets: Government securities and securities guaranteed by the Egyptian Government, £E21,136,77; sundry securities, £E529,873; advances on merchandise, £E2,034,209; advances on securities, £E4,660,380; advances otherwise secured, £E1,378,044; sundry other advances, £E1,597,439; bills of exchange, £E2,021,932; local bills discounted, £E750,272; buildings and furniture, £E247,686; money at call and at short notice, £E190,125; bankers' accounts, £E938,207; sundry other accounts, £E1,322,022. Cash: Notes, £E2,140,991; gold, £E481,322; silver, nickel, etc., £E289,497—£E2,911,810—£E30,719,076. Issue Department.—Notes issued, £E29 200,000—£E29,200,000. Gold, £E3,339,570; *British Treasury Bills, £E11,260,430—£E14,600,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, National War Bonds, and British War Loan, £E13,100,000—£E14,600,000—£E29,200,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916).

NEWS FROM ALL SOURCES.

The Yugoslav Minister of Finance has laid before the Chamber of Deputies the new Budget, which will balance at 7,829,888,071 dinars.

The directors of the Shell Transport and Trading Company announce an interim dividend of 2s. per share, free of tax, payable on January 5, 1929.

A cable from the Empire Marketing Board's correspondent at Jaffa states that the Oporto which was due to arrive at Liverpool yesterday carries 28,455 boxes of oranges from Jaffa. The Granada, reported as carrying 25,719 boxes of Jaffa oranges for Glasgow, is now stated to be due on December 3. This vessel also carries 2,405 boxes of oranges for Bristol.

The directors of the Egyptian Markets, Ltd., have declared an interim dividend (No. 48) of 5 per cent. (less income tax at 4s. in the £) in respect of the year ending December 31, 1928, on the ordinary shares, payable on and after November 15, 1928, at Barclays Bank (Dominion, Colonial and Overseas), 37-39, King William Street, London, E.C.4.

The total number of exhibitors of Greek products at the Salonika Fair this year is stated to have been 336. Tobacco was shown in its various stages of manipulation, as well as cigarettes of the Austrian and Italian tobacco monopolies, made with Greek tobacco, and other interesting sections were those of the local textile industries, the agricultural products of the local Communes, the stand of the National Office of Corinth Raisins, and the Machinery Section, which was one of the most important. Gabardines, surgical instruments, perambulators, and bicycles of Greek make were exhibited for the first time.

A leaflet has been issued by Messageries Maritimes giving details of their Mediterranean cruises in 1929. The cruises, the first of which begins on January 1, range from 25 days to 45 days, and afford the would-be traveller an admirable choice of itineraries, providing as they do for extended visits to the leading show places in the Mediterranean. Thus the first 45 days' tour, which leaves Marseilles on January 22, provides for visits to Athens, Constantinople, Smyrna, Rhodes, Larnaca, Mersina, Beyrout, Damascus, Tiberias, Jerusalem, Cairo, and the ascent of the Nile, etc.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 14:—

Egyptian Futures.

Sakel Contract.—We have again experienced a series of rather featureless sessions in this market during the past week; outside interest continues to be restricted, and trade operations remain on a relatively unimportant scale for this period of the season. Under these circumstances it is rather difficult to account for the steady undertone displayed, whilst certainly with the local contract well below Alexandria pressure should not be experienced at this side; one would have anticipated the overseas market reflecting in a more marked degree the curtailment in demand forced by the relatively high Sakel premiums over other varieties.

Ginning figures to the end of October are returned as 755,288 kantars, against 729,081 kantars for the same period last year. Receipts in Alexandria to the 1st inst. total 519,00 kantars and exports 282,000 kantars. Whilst probably outside consumers are more active than Lancashire, the above figures cannot be construed "bullishly" in our opinion; rather the reverse, as they appear to indicate supplies accumulating up-country and a tendency on the part of holders to await a general demand which, to say the least, is very slow in developing. With ideas of the crop stabilising around 2½ million kantars, plus the carry-over and a record Sudan crop in promise, supplies of fine cottons appear more than ample and no discernible points are apparent at the moment to cause consumers to purchase beyond their close requirements. To deal briefly with the price movements recorded since we last wrote, just prior to the publication of the American crop figures values fell away sharply on a moderate amount of local and Continental liquidation. The "bullish" after effects of this report have since caused a hardening tendency, to-night's close showing gains of 26 to 27 points, with November, 1929, exceptionally 40 points advance.

The Alexandria market has again maintained a steady level and continues to run out of line with our contract; thus we cannot anticipate the local stock of tenderable Sakel cotton, which, as reported last week, is abnormally small, being augmented for some little time. Near positions remain depressed owing to tenders of white cotton, but we understand that allowances latterly have not been so attractive to the sellers, and on this account differences may close up somewhat between now and the end of the month. For the immediate future, values may hold their ground provided the American markets maintain their upward tendency. Unless spinners' activities in Sakels commence to be on a larger scale during the next few weeks, we think holders will begin to show nervousness and start to let their cotton go at a narrowing difference with competitive qualities.

Upper Contract.—A considerable amount of activity has been witnessed in this contract during recent sessions, but with consistent selling against imports and straddle sales against purchases of December and February in Alexandria the undertone has inclined to the heavy side. Very large shipments are expected to bring the local stock up to high figures during the next six weeks; most of this cotton has been bought at a tenderable basis, and will go on the contract in January unless the trade offtake is on a larger scale or very handsome carrying premiums are forced. The counterpart of this import business are holders of the Upper-American straddle; these latter have already a substantial loss on their operation and appear to be faced with the alternative of accepting actual cotton or switching forward their holding at a heavy premium. The position is decidedly interesting; the trade demand appears to have slackened for the time being and strong competition from American staples has developed; in addition, we do not appear to have reached the peak of the marketing movement. With these factors operating, we expect resistance to any upward movement for the immediate future, and it appears quite probable that some closing down on the existing difference over the American contract may be forced by straddle liquidation during the next few weeks.

Egyptian Spot.

We have experienced a very quiet week in this department, in spite of the fact that at times the inquiry has been on a generous scale, and prices have exhibited a distinctly upward tendency. Sakel users have not been at all keen, but the inquiry for cotton between 11d. and 15½d. has been fairly good, and "pass to 150 on" has also been in quite good request at times. The local stock is so small, and the selection of attractive cotton (at medium rates) so poor that even a small amount of actual business affects prices these days, and the strength recently displayed in Alexandria has, of course, been reflected in our market also. Hence, we show a substantial advance on last week's quotations.

The top qualities of Sakel, quotations of which have recently been advanced considerably, have met with little interest this week. Uppers have been in fair request again, but the offtake appears to have slackened off somewhat. Stocks are now increasing rapidly and buyers are becoming more discriminating. A lot of cotton appears to be heading this way, and it is difficult to see how current values can be maintained unless something totally unexpected occurs. Most of the buying has taken place within the "25 off to 25 on" range, but there has also been an undercurrent of inquiry for lower

cotton at 10½d. or thereabouts. Top qualities have been neglected. Pilon cotton at from 12½d. to 13½d. has been in moderate request. Sudan Sakel, Tokar Sakel, and all "fancy" growths have suffered very much from neglect.

C.i.f. business has been very quiet. Forwardings to spinners last week were returned as 6,179 bales Egyptian and 883 bales Sudan. Quotations of Sakel show a net advance on the week of 55 to 35 points; those of Upper and Pilon have been raised 20 points. F.G.F. Sakel to-day, 18.15d. F.G.F. Upper to-day, 12.00d. F. G. F. Pilon to-day, 12.80d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 8, state:—

The market since our last report has been more active than during the previous week, but at the same time rather weaker. The week's summary of price movements is as follows:—Sakellaridis: November, 34.62 dollars, 0.39 dollars down; January, 35.05 dollars, 0.70 dollars down; March, 35.51 dollars, 0.64 dollars down; May, 35.95 dollars, 0.55 dollars down; November, 1919, 36.20 dollars. Ashmouni: December, 21.18 dollars, 1.37 dollars down; February, 21.67 dollars, 1.38 dollars down; April, 22.20 dollars, 1.15 dollars down; October, 23.03 dollars, 1.22 dollars down.

Sakel.—We have had a succession of featureless markets. The rather weaker tendency has developed as a result of some selling out of long positions, induced by the prevailing local expectation that the American Bureau crop estimate, which is to be published this evening, will be appreciably larger than that of last month.

On Monday last the Alexandria General Produce Association published its preliminary estimate of the Egyptian crop, which it placed at 7,500,000 kantars.

Demand from abroad has been moderately satisfactory; on the other hand, arrivals from up-country continue to be heavy, and holders are, generally speaking, disposed to sell whenever they can do so without breaking prices. Straddle purchases of Sakel against

sales of Ashmouni have been a feature on a moderate scale, and the difference between the two varieties has widened still further. We think that the market will continue to fluctuate round about present levels, in view of the fact that present influences for and against the market seem, as we stated in our preceding report, to counter-balance.

At the first November tender, 7,000 kantars dockets were issued. The Sakel/Ashmouni (January/February) straddle stands at 1,338 points, against 1,270 points last week and 866 points at this time last year.

Uppers.—The weakness in New York has been more than fully reflected in our market. The opinion generally prevalent locally that the American Bureau crop estimate will show appreciably larger figures has resulted in heavy liquidation, which, falling on a market already somewhat depressed by the continued large arrivals from the interior, has caused a sharp decline in values. Sales have been heavy, and were it not for the continuance of the satisfactory demand from the trade, which has absorbed the greater part of the cotton offered, the decline must have been more pronounced.

The decline which has taken place and the consequent narrowing of the difference compared with American should increase the attraction of Uppers to spinners, and we look for a gradual upward movement in prices as the season advances and the movement of the crop slows down. The Ashmouni/American straddle (December/January) stands at 242 points, against 326 points last week and 845 points at this time last year.

The week's receipts amount to 432,893 kantars, against exports 273,050 kantars; the stock in Alexandria stands at 2,769,565 kantars.

Spot.—We have had another busy week at Minet el Bassal and spinners' interest in our cotton has been quite well maintained. Sales amount to about 31,500 bales, of which we estimate 14,200 bales Sakel, 14,900 bales Ashmouni and Zagora, 1,300 bales Pilon, 600 bales Nahda, and 500 bales other varieties.

Sakellaris: Has been in good demand for all grades except low qualities, and a good business has been done. Spot differences are without much change, but are well maintained and inclined to harden for the grades round Fully Good Fair and those about Fully Good.

Ashmouni and Zagora: A good business has been done, though not so extensive as last week. The medium grades have attracted most attention; the low grades are neglected and there has not been much demand for the top qualities. Spot differences are without much change except for cotton over Good, which has weakened appreciably. Although the demand is quite good, stocks and arrivals are large and are offered freely.

Pilon: A fairly good business has transpired covering all grades. Spot differences are without much change.

Other Varieties: Nahda continues to attract great attention and is quickly sold when offered. Spot differences are unchanged for the medium qualities but distinctly dearer for Good and better. In White a good business has been done at last week's differences. A retail business has taken place in Maarad and Fouadi.

Up-country: The marketing of the crop varies from district to district. In the North Delta, the movement continues apace, but appears to be rather slowing down in the Southern districts. In Upper Egypt, while business continues brisk, transactions are not on the same large scale as last month.

Notes of the Week.

Serbs and Croats.

With King Alexander's return to Belgrade the possibility of changes in the Government is being freely discussed; but it is unlikely that any definite step will be taken until the Skupshtina has passed the Budget. The breach between Serbs and Croats is regarded as so complete that no suggestion is put forward in Belgrade for bringing the two parties together. The most that is hoped for would seem to be that the Croats will take part in new elections and that some agreement can then be arrived at for modification of the Constitution by a fresh Constituent Assembly. Whether the present temper of the Croats will allow them to fall in with this Serbian scheme remains to be seen. They will presumably require very specific safeguards for the changes that may be agreed upon before they take part in any elections, and it is not easy to see how these are to be given and accepted while the parties are not on speaking terms with one another. Rachitch's revolver shots on June 20 achieved more than he intended, for they have revealed some ugly skeletons in the Yugoslav cupboard. Serbian statesmanship has never been of a high order; if it had been, the Bulgarians would not have entered the War on the side of the Central Powers. What had not been properly realised, at least abroad, was the one-sided part played by the Crown in the Triune Kingdom. When King Alexander visited the wounded Stepan Raditch in hospital, there seemed some hope that the outrage in the Skupshtina would be kept within the limits that the dastardly action prompted by an unbalanced mind deserved. Raditch died, and the Croat nation in turn was wounded. It was then that King Alexander's presence was required in Zagreb and in as many places in Croatia as he could conveniently visit. This salve to the Croat wound, however, has not even yet, five months after the murders, been administered, and Yugoslavia stands revealed to the world as a country with so little cohesion between its component parts that it cannot produce a mediator between Croats and Serbs. The activities of a constitutional Sovereign are necessarily restricted, but it has been made clear that the Radical Party's monopoly of the Throne has been prejudicial to the interests of

Yugoslavia, and it would seem to-day as if action by the King alone could save the country from the fate of amputation that all parties fear.

A Federalised Yugoslavia.

Some advance will have been made in the settlement of the internal difficulties of Yugoslavia, if the Serbs are able to contemplate dispassionately a federation of States in the place of the highly centralised system imposed by the Vidovdan Constitution. One proposal, emanating from Zagreb, that has been put forward, would divide the country into five provinces, each with a separate State Assembly and uniting for the purpose of a Federal Parliament. According to this scheme the five divisions would be as follows: (1) Liubliana Province, including the whole of Slovenia; (2) Zagreb Province, comprising Croatia, Slavonia, North-West Bosnia and Northern Dalmatia; (3) Sarajevo Province, comprising the remainder of Bosnia, Herzegovina, Southern Dalmatia and Montenegro; (4) Belgrade Province, with the Banat, Batchka, Srem, Northern Serbia as far as Aleksinatz, with the Sanjak and the district of Tuzla (Bosnia); (5) Nich Province, comprising South Serbia and Macedonia. It is obvious that any concrete scheme will meet with opposition over matters of detail, as local aspirations will claim a legislature for each territorial unit. Only when it is realized that concessions have to be made not only in the general interest, but also to maintain the unity of the Kingdom, will there be any chance of a successful compromise. To this end the country must be able to call upon the services of a mediator who is above sectional partisanship, unless it is to be first purged of its suicidal parochialism by the heavy hand of a dictator.

A Lead by Roumania.

Dr. Vaida Voevod, the new Roumanian Minister for the Interior, has recently made an important declaration on the vexed subject of Minorities. Amplifying the Transylvanian creed he has laid down the following principles on which the Roumanian Government will base its policy. That peoples have the right to be governed, to be educated and to be judged in their own languages, and that as far

as possible these rights are to be exercised through their own nationals. If this principle could win general adoption in the Balkans, a happier day would dawn for the distressful Peninsula. It is, after all, the only policy based on common sense. There must always be minorities in the Balkans, however scientifically boundaries may be drawn. These minorities have already been able to satisfy themselves that existing frontiers are going to be changed with very considerable difficulty, if at all, unless the two Governments concerned can arrive at a friendly agreement on the subject. Accordingly minorities may be regarded as already predisposed towards peaceful acquiescence in their lot if only they can be assured of decent treatment, and are not continually subjected to attempts to dragoon them by force. The determining factor in their loyalty will generally be found to be their economic interests, which are almost inevitably bound up with those of the State to which they belong. The privileges of being governed and educated in their own language is a matter of sentiment, which becomes inimical to the State only when it is suppressed. The first State in the Near East to treat its minorities properly will be the first to have no minority problem.

Bulgaria and the Terrorists.

Not quite forty years ago Bulgaria suffered from a serious epidemic of brigandage. The story has been told before, but once again Bulgarians need to be reminded of it. The authorities were handicapped in dealing with the evil, because a certain amount of glamour attached to the men of the mountains, the border line between a brigand and a *komitaji* being narrow, and the villagers could not be induced to give evidence against them. The scandal of brigandage, however, had to be stamped out. Troops were mobilised, a prominent band of brigands was located, and finally run to earth in a village inn, where they were apparently on good terms with the villagers. Brigands and villagers were summarily executed outside the inn, and the country was quickly freed from brigandage; for as soon as the peasants realised that it did not pay to harbour brigands, the latter were unable to ply their trade. The method of stamping out brigandage was drastic, but effective. The time would now seem to have come when the Bulgarian Government of the day must take its courage in both hands and deal in a similar manner with Macedonian terrorism. It is, without doubt, a more difficult matter than mere brigandage; but Bulgaria's international reputation is at stake. Moreover, it is derogatory to the perfectly legitimate Macedonian cause that it should be identified with the terrorism associated with the present control of the Macedonian Revolutionary Organization, which is more concerned with its own blood feuds than with the interests of Macedonians. As in the case of the brigands, an effective display of courage on the part of the Bulgarian Government will silence all criticisms. When the terrorists have been eliminated, the Macedonian cause will be in a better position to come into its own.

Turkey's Southern Boundaries.

It is profoundly to be hoped that the negotiations now in progress at Angora between the Comte de Chambrun, French Ambassador to Turkey, and Tewfik Rushdi Bey, Turkish Foreign Minister, will have the effect of securing a final settlement of the Turco-Syrian frontier. There is no reason why Syria and Turkey should not be excellent neighbours. True, Syria has problems, such as the presence therein of Turks, which Iraq possesses either not at all or in much smaller degree; but the example of Turco-Iraqi relations may well be held out as a model for Turco-Syrian relations. After the bitterest things had been said, after international intrigue had been at work, and after Turkey and Iraq had more than once been on the brink of war, the new Turkey and the new Arab kingdom have managed to attain to an extremely cordial relationship. This fact is regularly manifested when the

Permanent Frontier Commission, of Turks and Iraqis, meets to discuss problems of the northern frontier of Iraq. The last meeting (they are held twice a year) was at Mosul on November 14, and the personal relationships are stated to have been excellent as between Turk and Arab. Valuable proposals, moreover, were made for the better ordering of the Turco-Iraqi frontier—for these meetings are by no means "eye-wash." It is in the interests of both Turkey and Syria to settle speedily their frontier problem, alike from the political, the economic, and the social point of view. Certainly those whose principal care is the British mandated territory in Arabia are hoping that Comte de Chambrun may succeed in attaining finality where first M. Franklin-Bouillon, in 1921, and later M. de Jouvenel, in 1926, failed.

The Wailing Wall Again.

As we foresaw, the controversy surrounding the unhappy incidents at the Wailing Wall on the Day of Atonement (September 24 last) has not been allowed to die down. For every protest or explanation which the Jewish community address to the League of Nations or to the authorities in Palestine, the Muslims are able to bring forward a counter-protest or a counter-explanation. Without question the local Muslim authorities have taken alarm at the possibility of Jews' obtaining legally recognised and precisely defined rights at the Wailing Wall, and they are now moving heaven and earth to preserve what they apparently believe are their own threatened rights, and to expose the "claims" of the Jews. For instance, it is just reported that the authorities of Haram-as-Sharif are using the site overlooking the spot where the Jews are wont to set up their Ark of the Law during certain ceremonies as a station for a muazzin, who is said thence to summon the Faithful to prayer. It is further stated that the Supreme Muslim Council has asked the Palestine Government to compel Jews to abstain from placing any furniture by the Wall, and to have a Jewish police officer who had been posted by it removed—as if the presence of a Jewish police officer lent sanction to the use of the Wall by Jews for their devotion. The situation has obviously, therefore, grown very difficult. We do not imagine that the Palestine Government will endorse all the Muslims' claims and proposals. There manifestly can be allowed no restriction on the Jews' habit of worshipping, within legitimate bounds, at the Wall—that must be safeguarded. But to what an unhappy pass have things come through the Jews' own action! We wonder whether certain of the cooler heads among the Zionist community, who realise the intensity and scope of the Muslims' claims, are not regretting the whole affair. There are but two ways of "solving" this problem of the Wailing Wall: the Government may use its paramount powers, which, being interpreted, implies physical force; or it may use good will, which means the early assembling of Muslim, Jewish, and British authorities. The second is obviously the only decent way, but unfortunately at the moment good will appears to be at a premium.

A Firebrand in Palestine.

As if the Wailing Wall did not provide enough fuel for the flames of discontent in Palestine to be fanned, the egregious Indian leader, Muhammad Ali, has been allowed to enter the Holy Land. The activities of Muhammad Ali since the Great War would make exciting reading. Eventually, one supposes, the light of truth will be shown upon such passages of his career as that dealing with the organisation and funds of the Caliphate Committee, and with his upholding and subsequent denunciation of King Ibn Saud. But possibly the authorities, having capitulated in the matter of the re-admission into Palestine of the Revisionist leader, Mr. Jabotinsky (who is reported to have taken on the editorship of *Doar Hayom*), felt that they could not rightly exclude the Indian Muslim leader, at least not on their original ground of the probability of his "intensifying the present inter-racial bitterness." In this they appear to have been justified, for Muhammad

Ali is reported to have attempted to set the Arabs, not against the Jews, but with them in antagonism to the grasping British! The British, he is stated to have exclaimed, were endeavouring to secure all Islamic lands, and it was wholly in their own interest, not in those of old or new settlers in the Holy Land, that they had seized Palestine. Some of the Palestinians, however, will have met Muhammad Ali at Mecca, where his scheme of a Republic for the Hijaz was so rudely treated by the leaders of the Wahhabs; and they may have come to the conclusion that, in touring the lands of Islam in an anti-British sense, Muhammad Ali is not wholly disinterested. This Indian leader is having bad luck, at any rate, in the timing of his visit to the Holy Land; for one cannot see the Palestinian Muslims giving up a perfectly good quarrel, in the matter of the Wailing Wall, against a traditional "enemy," for a vague, if larger quarrel, against the Power which has just upheld Muslim claims in Jerusalem in so striking a manner.

A Caucasian Federation?

At the end of Mr. W. E. D. Allen's lecture upon Georgia to the Central Asian Society last week (of which a report appears on another page) there was inserted a speculation upon the future of the Caucasian provinces of Russia. What may happen should the Bolshevik régime suddenly fall it is impossible to predict—as well might one speculate upon, say, the future of Kurdistan were the present Governments of Turkey and of Persia suddenly to collapse. The practical man will concentrate, therefore, on trying to improve things in the Caucasus in the circumstances which actually exist at the moment; and this is where Mr. Allen's suggestion of a confederation between Georgia, Armenia, and Azerbaijan appears particularly opportune. Whether the Russian Bolsheviks, who for all their seeming generosity to other nationalities within the Soviet Union, still retain the *Cheka* in the Caucasus, will come to see that they actually stand to gain by a strong federation of Caucasian States, there is little means of knowing. The assumption is, however, that they will foster the nationalism of the Georgians, Armenians, and Azerbaijanis only so far as it seems immediately to suit them. Whether the growing nationalism of these peoples, together with that of the Ukrainians, can be fitted into the scheme of the Bolsheviks, and who will prove the stronger, more permanent force—these things depend on the Gods, or, perhaps, on the Goddess. But the sympathy of Europe should go out to these little peoples.

The Shah's Visit to the South.

One of the distinguishing marks of the present Shah of Persia is his energy in visiting the different parts of his domains, and nothing but good should result from his recent visit to the southern province of Khuzistan. It is stated from Basrah that certain Arabs gave trouble during his visit, but the quarrel appears to have been of a minor nature—hardly sufficient, one would imagine, for the suspicious Teheranis to accuse the wicked British of having stirred it up! It was unfortunate that Riza Shah Pahlavi was obliged to cancel his projected visit to Abadan, where, of course, the refineries of the Anglo-Persian Oil company are, but the Shah is no stranger to the activities of the A.P.O.C., and is fully alive to the essential part which they play in the welfare of his kingdom. If the report is true that the Shah himself is inspecting or has inspected the southern terminus, Khor Musa, of the trans-Persian Railway, he will indeed be possessed of a sense of the probabilities of the situation, such as he could never have obtained from merely sitting in Teheran and approving the choice of Khor Musa as a place on the map. The more the Shah travels in Persia, the more will he perceive the inherent difficulties of "modernising" his State. And the better, therefore, should the foundations of future development in Persia be laid.

INDIAN NOTES.

A Road Fund for India.

Whether there was any logical justification for the distinction drawn between railways and roads when the reformed Constitution was inaugurated is open to grave doubt. Both required control, and co-ordinated control, but while this need was seen at once in the case of the railways, the necessity was not so obvious in the case of India's roads. The fact remains that the maintenance and charge of roads being made a charge upon provincial Budgets, and none of the provinces having the necessary funds for development, the result is that to-day there are only 59,000 miles of surfaced road in India, or less than one-third as much again as the railway mileage. Fortunately, this anomaly is at last beginning to receive the attention that its urgency and gravity alike demand, and if the major recommendations of the Indian Road Development Committee, an exclusive summary of which we are able to publish on another page, are adopted, a very substantial advance will have been made towards its removal upon sound and businesslike lines. The real task of the Jayakar Committee, as we pointed out in these columns last November, was not to work out detailed measures of road improvements. Instead, as a result of a comprehensive survey of the actual conditions in every province—an inquiry which Sir Arthur Froom's Sub-Committee has conducted with commendable thoroughness—it was required to determine the best means of stimulating and co-ordinating local efforts, and, in particular, of raising the additional funds that will undoubtedly be needed if the public is at last to be tackled on thorough-going lines. Rejecting both for constitutional reasons and on the ground of expense the suggested establishment of a Central Road Board with executive powers, the Committee considers that the necessary co-ordination in construction and research can be effected by the holding of a periodic road conference between representatives of the Central and local Governments. To provide the necessary funds, the Committee favours the adoption of the Bombay Government's suggestion—described in detail in our issue of December 22. It accordingly recommends that the petrol duty should be raised from four to six annas, the surplus being credited to a central road fund by a five-year convention in the Legislative Assembly, and also by an increased tax on motor vehicles. Five-sixths of this fund, it is

GREECE AND TURKEY.

Although the relations between Greece and Turkey are repeatedly described as correct in official utterances on both sides, the fact that it has not yet been possible to settle all questions connected with the exchange of populations suggests that any change that may have taken place in the attitude of the two countries to one another has not penetrated very far below the diplomatic surface of things. The points at issue remaining to be settled are termed technical, and consequently, in spite of the uncompromising pertinacity with which each side maintains its own claims, differences regarding them are held not to involve the relations between the two Governments. Events tend to prove that there are limitations to this comfortable theory. Among the wiser heads both in Turkey and in Greece there is some anxiety over these protracted disputes, as it is recognized that, so long as they last, they entail the risk of a more or less serious rupture. It would be more correct to call the matters in dispute financial rather than technical. They involve in the main a nice adjustment of claims for compensation in respect of nationals who, having been exchanged or ejected, have abandoned their properties or have had them sequestered for one reason or another. Each Government readily promised to pay compensation in the belief that, on a balance being struck between the two totals due, from Greece to Turkey and from Turkey to Greece, it would be the favoured party. As both are equally anxious to avoid having to make any payment, the process of assessing claims by a commission on which Greece and Turkey are equally represented is necessarily a long one. The Commission charged with the task has had several unedifying experiences, and the position has not been improved by the freedom with which two of the three neutral members are labelled respectively "pro-Greek" and "pro-Turk."

The latest trouble has arisen over the dispatch of a Special Commission to Western Thrace to inquire into the condition of Turks in that province in view of certain allegations brought against the Greeks. After a brief stay in Thrace the members returned to Constantinople with their mission unfulfilled. In such circumstances there was only one proper course for the Special Commission to adopt; it ought to have issued at once an agreed statement regarding the abortive journey; if that could not be done, the president ought to have lost no time in issuing his own statement. As things happened, the Turkish delegate produced his version first, and attributed the failure of the mission to the obstacles placed in its way by the Greek authorities. The Greek followed by accusing his Turkish colleague of insisting upon inquiries outside the terms of reference, and the President's version is that the incompatibility of the Greek and the Turk

was so complete and their disagreement so profound that he had no alternative to an immediate return to Constantinople. Both the cantankerous delegates will, presumably, be supported by their respective Governments. The basis of the inquiry was the treatment of Turks in Greece in connexion with matters relating to property. The Turk appears to have interpreted his mission as including an investigation into the facilities accorded to Turks on Greek soil to wear bowler hats instead of fezes and to learn the new Latin characters for writing the Turkish alphabet. As the merit of every Turkish official at the present moment is dependent on the public zeal that he shows for the Latin characters, it was too much to expect that the Turkish delegate could remain indifferent to this all-important subject, however remote it may have been from the matter in hand. If the Greek delegate had been a wiser man, he would have allowed his colleague the fullest length of rope in this respect, in the expectation that the latter would devote so much attention to fezes and alphabets that he would have little that was useful to say on the real issue. The President of the Commission, it would be imagined, could be relied upon to sift the essential from the non-essential in drafting his report. Unfortunately, on this occasion Greek mentality did not rise superior to Turkish mentality, and the Turks are able to convince themselves that Greece has much to conceal in regard to the treatment of Turks on Greek soil. Easy consciences are not a conspicuous product of the Balkans; but this was certainly an opportunity to confirm Greece's contention that she has nothing to gloss over in Western Thrace, by allowing the Turkish delegate to roam at will among his nationals, just as a Greek can investigate at his own pleasure the conditions of his compatriots in Constantinople.

The fate of Sodom was sealed by its inability to produce ten righteous men at a critical moment; if Greco-Turkish relations are to be dependent on the capacity of the two countries to put up between them a similar number of statesmen, the outlook is indeed black. It is to be hoped, therefore, that one on each side will suffice. If the two Governments had been able to spare two statesmen to represent them on the Mixed Commission for the Exchange of Populations, its work would surely have been finished long before now. So long as more store is set on alphabets and terms of reference than on the establishment of friendly relations between the two countries the Commission's task may never end. The time has come, therefore, for Greece and Turkey to place the question of their good relations in the hands of statesmen. If on the one side only M. Venizelos is available and on the other only Ismet Pasha, then the sooner the two meet the better for the interests of the two countries. The exchange of populations is an open sore; there are others that the two Governments nurse in secret, one of them being the question of naval armaments. By crude methods a working basis has been found for the permanent establishment of correct, if not cordial, relations between Turkey and Greece. It would be a grave misfortune for both countries, if they allowed that basis to be broken or undermined, before they had built upon it. Unless, however, they hasten on a frank discussion between representatives who are statesmen enough to give way on unimportant matters, in order to secure the things that really count, a serious breach may occur, to the material detriment of both peoples and to the prejudice of peace in the Near East.

*The Near and Middle East

From Our Own Correspondents.

Cairo, November 17.

Armistice Day.

Armistice Day was celebrated by all the British communities in Egypt, as in previous years, by the holding of special services and the laying of wreaths, in which the foreign communities collaborated, on the Crosses of Sacrifice in the various military cemeteries. The High Commissioner and Lady Lloyd attended the service in All Saints' Pro-Cathedral in Cairo, and the British Consul-General and Mrs. Heathcote-Smith that in St. Mark's Church in Alexandria.

The Late Sarwat Pasha.

The customary meeting in memory of the late Sarwat Pasha took place on Saturday afternoon at the Royal Opera House. Practically every Egyptian of any standing was present, and the gathering included the members of the Diplomatic Corps. The meeting was presided over by Dr. Hafez Bey, Minister of Foreign Affairs, and eloquent tributes to the deceased statesman's achievements and the services he had rendered his country were paid by Lutfy Bey Essayed, Minister of Education, Abdel Hamid Pasha Bedawi, head of the Contentieux, Judge Peter, of the Mixed Courts, and Dr. Mohamed Hussein Heikal Bey, Editor of *As Siassa*. A poem by Ahmed Bey Shawky was read by Tewfik Pasha Doss, and the verses, among the best this eminent Arabic poet has composed, moved the audience to such a point that certain portions had to be repeated. The ceremony ended with a speech of thanks from Sarwat's eldest son, Ismail Bey Sarwat.

The Prime Minister's Tour in the Provinces.

No one who was present during the tour which the Prime Minister, Mohamed Mahmoud Pasha, made in the Province of Dakahlia this week, could, I think, doubt of the successful manner in which he is carrying the country with him. The Wafd has been at great pains to make out that the whole thing was stage-managed, and that the crowds, such as they admit they were, were composed of "ghaffirs" brought in from all parts. It is evident, however, that the Wafdists are daily finding themselves at greater pains to maintain their position in the face of the popular approval with which the new Cabinet's policy and actions are being received by the people in the districts.

I, myself, who have been present at most of the provincial visits or journeys made by heads of the Government during the past few years and can pretend to some knowledge of the people of the districts, can certify that on the occasion of the journey from Tanta to Mansurah and during the whole of the visit to Dakahlia, the demonstration which greeted Mahmoud Pasha at no point was an organised one. Its proportions were, indeed, too great, and the excitement of the people was far too spontaneous for any organisation to have created. The

fact is that, although the Egyptians are an impressionable people, easily led from one flank to the other, they have become tired by the specious promises held out to them by the Wafd, and, above all, by the incessant demands for contributions from its committee without their having obtained any material advantage in return.

On the other hand, under the new régime there has been a total absence of pressure for money, while the promises of benefits with which the new Cabinet inaugurated its advent to office have already begun to materialise. This visit to Dakahlia, which has afforded, by the laying of foundation stones for village hospitals, an earnest of the intention of the Cabinet to translate words into deeds, cannot fail, one would think, to cause the people to contrast the present régime with that of the Wafd, to the latter's great disadvantage, and to induce them to have confidence in regard to the realisation of the other promised reforms, and to rally to the support of the present Cabinet.

It is a remarkable commentary on the changed position of the Wafd that on Tuesday last, the anniversary of the day on which Zaghloul Pasha first presented to the British Government the demand for Egyptian independence, the attendance at the schools, in spite of the almost frantic efforts made by the Wafd to get the students to strike, was greater than it has been for some time.

Aswan Dam.

The Commission, consisting of Messrs. Binnie (British), Cooper (American), and Grüner (Swiss), which is to investigate, from the constructional point of view, the scheme for the heightening of the Aswan Dam, has now assembled and started its labours. It is now at Aswan, where it will be engaged during the next fortnight on examining the existing structure. Before its departure the Commission heard the evidence of Sir Murdoch MacDonald, who has submitted a scheme for raising the Dam. The Commission could not have arrived at a better moment, for this week the filling of the Dam will start, and it has been just in time to examine the upstream face before it is submerged and the downstream face as soon as it has been uncovered by the closing of the sluices. It is expected that the Commission will take about a month to do its work, and that its report will be ready by Christmas time.

The Medical Profession in Egypt.

The latest *Official Journal* contains the text of the decree-law laying down the conditions under which Doctors and Dentists can in future obtain permission to practise in Egypt, and regulating generally the exercise of the medical profession. The law under which medical practitioners have hitherto been permitted to practise was promulgated in 1891, since when, except in the case of dentistry, no change has been made in the legislation on the subject. New regulations have become imperative, because, under the lax provisions of the old law, a large number of men have managed to obtain permission to practise without having either the proper training or

adequate experience. Many had been accepted as qualified practitioners on diplomas granted by foreign faculties which themselves recognised their unsatisfactory nature, since the granting of the diploma was made conditional on the grantee's practising in the country in which the faculty was situated.

The more responsible members of the medical profession have become exceedingly alarmed at the number of so-called medical men of this description who have been able to set themselves up in the country, and whose sole occupation is to pander to vice and exploit the incredulous and unsophisticated; and it is as a result of the pressure brought by these responsible members of the medical profession that the new law has been introduced.

Henceforward anyone wishing to obtain permission to practise medicine, surgery or dentistry, will either have to have a diploma of the Faculty of Medicine of the Egyptian University, or having a foreign diploma recognised as the equivalent of the Egyptian diploma by a committee of three Egyptians and one foreigner, will have to pass an examination before a permanent committee of doctors, based on the final examinations of the Egyptian Faculty of Medicine. Exemptions may, however, be granted to professors of recognised foreign schools and faculties of medicine, as well as to doctors who have occupied a responsible position, such as the head of a clinic, during at least five years in a foreign hospital recognised by the Egyptian Government.

Provision is also made in the law for disciplinary measures against members of the medical profession who are convicted by the Courts of acts affecting their integrity or professional capacity, and thus it will no longer be possible, as has happened in the past, for men who have served a term of imprisonment for illegal practices to resume their profession on emerging from prison.

In view of the imminence of the Medical Congress, which will be attended by so many world-renowned mem-

bers of the medical profession, the Egyptian Government has done very well to amend a state of affairs which would certainly not have failed to arouse adverse comment among the members of the Congress.

TRANS-JORDAN.

Amman November 13.

A Boycott?

The elections, which are shortly due to take place, seem likely to prove somewhat of a fiasco. Some of the conditions of the late Treaty with Great Britain were most unpopular, notably that which charges Trans-Jordan with some of the cost of the British forces stationed here, and of the Trans-Jordan Frontier Force. A further grievance is the occupation by Muslims of neighbouring countries of posts in the Government, more especially when these posts are those of highly paid officials. The recent bad season has caused great poverty and consequent discontent, and these combined causes have produced a threat completely to boycott the elections. It is difficult to see what will be done in that case, as the acceptance of the Treaty depends on its being passed by a Parliament which would not then exist.

A Departure and Visit.

Great regret is felt at the coming departure of Group Captain Rees, V.C., O.B.E., M.C., A.D.C. He has been in the country for more than two years, and during that time has acquired a personal, geographical and archaeological knowledge of Trans-Jordan which must be almost unrivalled.

The Bishop in Jerusalem visited Amman during the first week of November and held services at the Royal Air Force Camp, and at the C.M.S. school in the town.

General News.

Rain fell all over the country at the end of October, a month when rain is of inestimable value for the crops. Last season was so bad that the *fellahin* have practically no wheat to sow. Both here and in Palestine the Government has imported seed, which the farmers are invited to buy on favourable terms.

The inauguration of a Children's Welfare centre in Amman is proving a great success. Both rich and poor classes have welcomed the scheme eagerly, and it is being clearly shown that the terrible percentage of infant mortality here is realized by the parents, and that they are ready and anxious to learn, if the means of doing so are provided for them. Unfortunately Trans-Jordan is a poor country, and the question of finance will prove a stumbling block.

The ordinary issue of Trans-Jordan stamps was sur-charged *Dustur* (Constitution) for the month of September only to commemorate the grant of a Constitution to the country. No previous warning was given to the International Postal Union, and consequently philatelists did not, as often happens in such cases, buy up a large part of the issue. According to the usual procedure the stamps that were unsold were burned at the end of the month, and as the issue was not a large one, it is likely to become valuable.

CYPRUS.

Nicosia, November 14.

Armistice Day.

On November 11, Cyprus participated in doing honour to the fallen heroes of the War. A service was held at St. Paul's Church, at Nicosia, and a two-minutes' Silence was observed at 11 o'clock, a gun being fired by the police.

A New Criminal Code.

The introduction of the new Criminal Code, approved by Order in Council, has been subject to much adverse criticism, and disapproval. At a meeting of the Greek members of the Legislative Council, held at Limassol, a strong protest against its adoption has been drawn up and forwarded to the Governor, with a request that it might be transmitted to the Secretary of State. Greek members of the Bar are holding meetings of protest in other towns. The Press has joined in its disapproval, stating that it is mere mockery to speak of Cyprus having a Constitution when laws are imposed in an undisguisedly dictatorial manner, as at present, without local approval. The new Code, published in the *Official Gazette*, contains 44 chapters and 366 sections.

A Greek Prelate.

A distinguished member of the Orthodox Greek Church, the Metropolitan Christophoros Kretes, lately Archbishop in Australia, has been the guest of the Archbishop of Cyprus. His Eminence was for some time at Oxford. He has been received with honour by Sir Ronald Storrs,

and entertained to tea at Government House. He will proceed from Alexandria to Abyssinia, and will afterwards visit other countries in North Africa, in which there are Greek communities, as representative of the Œcumenical Patriarch.

A Greek Sporting Club.

Some members of the Greek community are establishing a Club, which will have for its aim the encouragement of all legitimate sport, and which hopes to enrol members in all districts. It will assist in protecting game during the close season, in preventing the taking of the eggs of partridges and other birds, and prosecuting offenders. Game is said to be diminishing in several parts of the island, and that excellent bird, the francolin, is now very rare. The movement deserves encouragement, and should succeed in doing a considerable amount of good in the interests of sport.

Religion and Politics.

The Greek Archbishop recently called a meeting of the Holy Synod, Greek members of the Legislative Council, and mayors of towns, to consider the question of a communication to be submitted in reply to the dispatch of the Secretary of State for the Colonies to his last memorial from Cyprus.

General News.

Amongst other items of interest it has been notified that Major T. F. Chipp, Agricultural Director of Kew Gardens, will visit Cyprus and consider, with the Director of Agriculture, various botanical problems of the island.

Mr. W. Megan, Flax Expert of the Ministry of Agriculture in North Ireland, will also visit Cyprus; expenses of the mission will be paid by the Empire Marketing Board.

An illuminated diorama, representing the wine industry of Cyprus, constructed by artists of the Imperial Institute, is to be exhibited shortly. Photographs for the purpose are supplied by Mr. N. P. Laniti, of the Cyprus Wine and Spirit Company.

GREEK NAVAL MISSION.

The British Government has agreed to a renewal of the contract, which expires next March, of the British Naval Mission to Greece, but changes in the personnel of the Mission will be made, according to *The Times*. The present Mission, of which Captain C. E. Turle is the head, began its work on March 15, 1927, and was to last two years. Its officers include Commander Daniel de Pass, Lieutenant-Commander H. B. Crane, Lieutenant-Commander F. C. Lyon, Wing Commander C. H. K. Edmonds, D.S.O., O.B.E., R.A.F., and Squadron Leader John C. Brooke, D.S.C., R.A.F. Almost continuously since the spring of 1911 the Greek Navy has had the co-operation of British naval officers. Rear-Admirals Lionel G. Tufnell, Mark Kerr, Aubrey Smith, and G. S. Townsend have been among the officers in charge of mission as Athens.

General Samsonovici, formerly Assistant Chief of the Roumanian General Staff, has been appointed Chief of the General Staff.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 8.

All-India Congress Committee.

"But the little tin gods of the Congress find now their own creation a clear menace to the position which they had made for themselves in the Congress and through the Congress in the leadership of the more vocal politics in the country. This is the correct psychology of the ugly revelation made last week-end at Delhi."

Thus Mr. Bepin Chandra Pal, writing in contempt or anger of the proceedings of the All-India Congress Committee. But to tell the story first.

The Working Committee of the Congress Committee (the name is as cumbrous as the body, which is composed of over seventy persons) met at Delhi at the end of last week, and after long, if not grave, deliberation, for the air is reported to have been one of merriment, passed the following resolution as expressing a compromise agreed to by Pandit Motilal Nehru and Mr. Srinivasa Iyengar:—

"This Committee of the All-India Congress Committee adheres to the decision of the Madras Congress, declaring complete independence to be the goal of the Indian people, and is of opinion that there can be no true freedom till the British connexion is severed. This Committee accepts the recommendations of the Nehru Committee as agreed to by the Lucknow All-Parties Conference for the settlement of communal differences. This Committee cordially congratulates the Nehru Committee for their labours, patriotism and farsightedness, and, without prejudice to the resolution of the Congress relating to complete independence, is of opinion that the recommendations of the Nehru Committee are a great step towards political advance, and without committing itself to every detail, generally approves of them."

Mr. Bepin Chandra Pal's reading of the situation is this. The Congress, he says, lost its position of being the sole national political organisation, when the older leaders broke away, and formed the Liberal Conference. It then lost the position of being the sole organisation, but continued to be the most influential. The appointment of the Statutory Commission forced the Congress to co-operate with organisations that up to then it had affected to ignore, or had in fact ignored; in the words of Pandit Motilal Nehru, the "Congress last year passed a resolution authorising the Working Committee to arrange an All-Parties Conference; the Congress was "responsible for its creation." All would still have been well, had the All-Parties Conference failed to find a formula, but it found one: the Nehru Report, that document embodying Dominion Status. Thence the necessity, as seen in that clear brain of the Congress, Mr. Srinivasa Iyengar, of making the Nehru Report nugatory, and thence last Saturday's resolution. Two ex-Presidents of the Congress, Lala Lajpat Rai and Mrs. Annie Besant, who were present, did not vote on the resolution.

A Confession of Faith.

The Working Committee met again on Sunday, when Pandit Madan Mohan Malaviya moved the reconsideration of the resolution passed the day before, seeking to delete the words "there can be no true freedom till the British connexion is severed." Seeing that the words "complete independence" would still have stood, one does not see how that would have bettered things, and anyhow Dr. Ansari ruled out the motion. Thereupon Pandit Motilal Nehru made "a confession of faith." He yielded to none in the firm belief in complete Indian independence, but Dominion Status was not to be spurned. The following day the Pandit made a statement in a Press interview. He began by explaining that the words "there can be no true freedom until the British connexion is severed" merely explain what is meant by "complete independence." As everyone but Pandit Madan Mohan Malaviya knew that, if he did not do so also, that does not help us much. Then

follows what has either been misreported, or was, never meant to be fully understood:—"I repeat what I formerly said, that I am free to confess that the impressions I have formed in the course of my wanderings in Egypt and Europe have made me to revise my opinion about British connexions, however desirable it may be to maintain them, and I still cling to the hope that it should be desirable to do so. I feel we have made a great deal too much of it. The truth is that England cannot afford to set India free if she is to maintain her present supremacy in the world, and it is idle to expect her to forgo that supremacy in a fit of generosity."

Confirmation of the soundness of Mr. Bepin Chandra Pal's reading of the situation is to be found in a statement of Mrs. Besant: "I do not propose to leave the Congress, but I think I can serve India better in the united body called the All-Parties' Conference, and I trust that it will make itself permanent until its end is attained." If others should take that view, there will be important developments. Another remark of Mrs. Besant's was: "It is very unpalatable to me to hear the subject of the nation's life discussed in the jovial atmosphere that pervaded the All-India Congress Committee." Another was: "There was a feeling of insincerity about the whole affair."

The Anglo-Indian Press.

The *Statesman's* comment is: "What Mrs. Besant does not see is that it is the 'jovial atmosphere' that saves the situation, and that enables the Indian Government and the British Government to treat the resolution and the speeches as the joke they are. If any responsible person treated the talk of 'revolution' and of 'severing the British connexion' and of applying force to end that connexion as other than play-acting, it would be preposterous to ignore them. . . . Because the Congress treats the demand for independence as a joke and everybody else can do the same, it is possible to remain quiescent."

The *Englishman's* comment is more in the spirit of the following: "The people who declare that they stand for 'independence' know perfectly well that there is no prospect of their demand being conceded—if there were, they would never have dared put the demand forward. The cry of 'Independence for India' is nothing more than a level to oust Pandit Motilal Nehru from his position and thus make room for somebody else."

I may be thought to have dwelt at too great length on the subject of the Working Committee's proceedings, but, first, there has really been very little news of general interest this week besides them, and, secondly, it will be impossible for anyone who is not clear about what has just happened to follow the future ramifications of Indian political intrigue. They may not be worth following, if it true.

All-Parties Muslim Conference.

The leading newspapers thought very little space was space enough in which to report the proceedings of the All-Parties' Muslim Conference, which has just concluded its session. This is given in one report as the main purport of the proceedings: "Maulana Azad Subhani proposed . . . that the Conference should declare itself in favour of complete independence. Some of the members objected to such a declaration which, in their opinion, would go against the best interests of Mussalmans. Upon this a number of women from the purdah gallery sent a written statement to the President, saying that if the men had not the courage for complete independence, the women would come outside of purdah and struggle for independence." The hen-pecked husbands thereupon passed their resolution with only one dissentient voice.

The Board of Indian Civil Service Studies at Cambridge University are prepared to appoint a lecturer in Tamil and Telugu, whose duties will commence in October, 1929. The full stipend will be £300 per annum with fees. Applications should be sent to the secretary.

INDIAN ROAD DEVELOPMENT.

Summary of Recommendations.

The following are the conclusions and recommendations of the Indian Road Development Committee:—

A.—*The desirability of developing the road system of India.*

The development of the road system of India is desirable for the general welfare of the country as a whole, and in particular—(a) for the better marketing of agricultural produce; (b) for the social and political progress of the rural population, which will be advanced by the increased use of motor transport; (c) as a complement to railway development.

B.—*The means by which road development in India could most suitably be financed.*

(1) Road development in India is passing beyond the financial capacity of local Governments and local bodies, and is becoming a national interest which may, to some extent, be a proper charge on central revenues.

(2) Road development, in so far as it contributes to the general welfare of the country as a whole, is a proper charge on general revenues, but no increase in the expenditure on roads from existing revenues is recommended.

(3) To meet the additional demands and requirements created by the growth of motor transport, some additional taxation might be imposed on motor transport for purposes of road development over and above the existing taxation for general revenues.

(4) A well-balanced scheme of additional taxation on motor transport for purposes of road development should include:—(a) a duty on motor spirit; (b) vehicle taxation; (c) licence fees for vehicles plying for hire.

(5) The duty on motor spirit might be raised to 6 annas per gallon without affecting consumption, provided that the additional 2 annas now imposed is spent on road development.

(6) The amount so realised would be Rs.62 lakhs on the figures of 1927-28, but the consumption of petrol has been increasing annually at the rate of 30 per cent. compound interest. Further, if the time arrives when it is possible to abolish or reduce taxation on motor spirit for general revenues; the Government of India might consider the desirability of retaining the tax for purposes of road development.

(7) An effort should be made to induce the oil companies to co-operate with the railway administrations in reducing the price of petrol in inland towns.

(8) The duty on motor spirit is a source of central revenue, and grants from central revenues for road development can only be made through the constitutional processes prescribed by the Government of India Act.

(9) As grants for road development cannot be used effectively unless some continuity is assured, a convention should be established for five years, whereby the Legislative Assembly would annually vote the proceeds of the additional duty on motor spirit as a block grant for expenditure on road development. This annual grant should be credited to a separate road development account, and unexpended balances should not lapse at the end of the financial year.

(10) The Legislative Assembly should continue to exercise control over the expenditure of the annual grant in two ways:—

(a) The general principles in accordance with which the grant should be spent should be approved by the Assembly;

(b) A Standing Committee of the Indian Legislature for Roads should be appointed, similar in construction and functions to other departmental Standing Committees, which would advise the Governor-General in Council on all matters relating to roads; and all proposals for expenditure from the annual grant should be submitted for approval to a finance

sub-committee, consisting of the member of the Governor-General's Executive Council in charge as Chairman and all members of the Standing Committee who are members of the Legislative Assembly.

(11) The annual grant should be divided as follows:—

(a) One-sixth should be retained by the Government of India as a reserve;

(b) Out of the remaining five-sixths—

(i) An apportionment should be made among the provinces in the ratio which the consumption of petrol in each province bears to the total consumption in India in each year;

(ii) The balance, representing the consumption of petrol in minor provinces and administrations and Indian States, should be allotted as a lump sum to the Government of India.

If any part of the amount apportioned to a province remains unexpended at the end of the financial year, it should be carried over for expenditure in that province in the following year.

(12) Grants should be made to each province, up to the amount so apportioned to it in each year, for expenditure on projects approved by the Governor-General in Council with the advice of the Standing Committee of the Indian Legislature for Roads.

(13) The amount apportioned to Burma may for the present be spent on any scheme of road development that is approved by the local Government and the local legislature. But if at any future time the question of road connexion with India became a live issue, the position should be reconsidered.

(14) Vehicle taxes and licence fees for vehicles plying for hire are sources of provincial or local revenue, and it is entirely for local Governments, local legislatures and local bodies to decide what additional taxation of this kind could be borne by motor transport for purposes of road development.

(15) Except in certain areas vehicle taxation has scarcely been adopted as a method of taxing motor transport; and in view of the recent substantial reduction of central taxation for general revenues, this source of revenue for road development might with advantage be explored.

(16) There is a general desire that vehicle taxation should be provincial rather than local, and that a system of reciprocal exemptions should be arranged so that each vehicle would be taxed only at the place of registration.

(17) The scale of licence fees for vehicles plying for hire depends on local conditions, but it might be considered by the authorities concerned whether licence fees might not be pitched so as to limit the number of vehicles plying on any road to the number that the road can economically carry.

(18) The propriety of financing road development from loans must be decided by each local Government for itself according to its circumstances, but certain principles of general application are suggested.

(19) Loans should be borrowed in the ordinary way on the security of the revenues of India, and not on the security of a special road development tax.

(20) Village roads should benefit indirectly by the release of provincial revenues and local funds which are now being spent on main roads to meet the requirements of motor transport. In view of the importance of village roads in the general scheme of communications, it is hoped that they will receive more attention and larger grants from local Governments and local bodies in future.

C.—*The co-ordination of road development.*

(1) The appointment of a Central Road Board with executive powers, administering a separate road fund, is not recommended.

(2) A periodical Road Conference, consisting of the Member of the Governor-General's Executive Council in charge as Chairman, the members of the Standing Committee of the Indian Legislature for Roads, representa-

tives of the Departments of the Government of India concerned with roads, representatives of the local Governments, and, if so desired by them, of Indian States, should meet from time to time to discuss subjects of common interest, and might appoint sub-committees to examine questions of a technical character and report to the Conference.

(3) A separate Road Department in the Government of India would be unnecessary and undesirable, but a Road Engineer with the Government of India should be attached to the Department that deals with roads.

(4) The Government of India should reconsider the recommendations of previous Committees that all matters relating to communications and transport should be dealt with by one department.

D.—Miscellaneous.

(1) The Indian Railways Act and the Devolution Rules should be amended so as to enable the railway administration to contribute towards the construction and maintenance of feeder roads.

(2) A contribution should be made from the Army budget towards the cost of repairing damage done to roads by military transport; and when a road or bridge is required for military reasons to be of higher class than is necessary for civil purposes, part of the cost should be borne from the Army budget.

(3) Monopolies of public motor services on roads are undesirable.

(4) Road tolls on all traffic should be abolished as soon as possible, except tolls on bridges where a definite service is provided to replace a ferry or a bad river crossing.

INDIA IN PARLIAMENT.

The injunction recently granted by the Bombay High Court restraining members of the Sholapur Textile Union from inciting workmen to continue the strike was the subject of a question by Mr. Thurtle, who pointed out that the action was the first of its kind in India. In reply the Under-Secretary of State explained that according to his information the suit in question is a civil suit, and one of the points at issue appears to be whether or not the defendants are members of a registered Trade Union. Under Section 18 (1) of the Indian Trade Union Act of 1926, Lord Winterton reminded the hon. Member, officers and members of trade unions are only exempt from civil proceedings on grounds such as are alleged in the plaint if the Union is registered under the Act.

Although the Indian Trade Unions Act was passed at the beginning of 1926 it did not actually come into force until some eighteen months later. Registration is optional, but properly constituted trade unions are afforded every reasonable inducement to register by conferring upon them certain definite privileges more or less analogous to those enjoyed by their prototypes in this country. Unregistered bodies are left, both as regards privileges and obligations, in their previous position.

Requests for information regarding the status, rights and responsibilities of the Indian States again figured prominently in the order paper on Monday, the day to which, by an acknowledged convention, questions on Indian affairs are now almost exclusively confined. For the benefit of the persevering member for Battersea N., Lord Winterton explained that the territories included in the Western Indian States Agency comprise a total area of about 35,000 square miles, with a population of roughly 3½ millions. The people of the territories are not considered British subjects but owe allegiance to the Rulers of the various States. No question, therefore, arises, the Under-Secretary pointed out, of their having rights of representation as British subjects. The British officials employed in the Agency, he added, are responsible, though the Agent to the Governor-General, to the Government of India; but, pressed to explain more explicitly what recourse the people in question enjoyed in the event of maladminis-

tration, Lord Winterton rightly contended that the divergent and varying conditions in the Agency could not be explained within the compass of a Parliamentary answer.

While in this respect, and in his later and very proper objection to being called upon to discuss important constitutional issues by the same means, the Under-Secretary's attitude was perfectly correct, his subsequent disclosure of the deficiencies of the India Office archives comes, to say the least, as something of a surprise. We refer to his inability "in the absence of fuller information than is available here" to state "the number of Indian States in which representative institutions for the enactment of laws exists; in which liberty of person and freedom of speech, meeting and association exists; and the number in which there is a fixed civil list, subject to independent audit, for the rulers and their families." The absence of information upon the latter point in particular is of especial interest in the light of the subsequent assurance that the Paramount Power is supplied with whatever local information is necessary for the proper discharge of its functions, the nature of which, he recalled, was explained in Lord Reading's letter to H.E.H. the Nizam of Hyderabad of March 27, 1926.

The delegation representing the Indian State Peoples' Conference, which last week presented a long memorandum to the Indian States Inquiry Committee on behalf of the subjects of some 70 Indian States, addressed a meeting of members of the Parliamentary Labour Party in a committee room on November 21. The proceedings were private, but it is understood that the deputation expressed itself as very satisfied with the reception accorded to its memorandum both in political circles and outside. It is understood that Dewan Bahadur M. Ramchandra Rao, the Chairman, had an interview with Lord Peel and Lord Winterton at the India Office last week.

Of more general interest were the interesting statistics elicited by Mr. Pilcher in connexion with the Indian and other beam wireless services. After ascertaining that the total capital cost of the four transmission stations—Australian, Canadian, Indian, and South African—Mr. Pilcher asked the number of messages sent or received by the Post Office beam services during the first year of beam operation in the case of each country, including also the traffic during the first week of operation, during the week ended April 2, 1928, and during the latest week for which returns were available.

Traffic statistics for the period named not being readily available in the form of messages, the following statistics of *paid* words were given instead. On the Australian service during the first 52 weeks of its operation, 7,306,000 words were handled; on the Canadian service, 4,591,000; on the Indian service, 10,078,000; and on the South African service, 8,375,000. During the first complete week of operation, during the week ended April 1, 1928, and the week ended November 11, 1928, the respective totals, for the Indian service only were 115,000, 212,000, and 253,000.

THE INDIAN STATES INQUIRY COMMITTEE.

A deputation claiming to represent the Indian States Peoples' Conference has submitted a memorandum to the Indian States Inquiry Committee, which concluded its inquiry this week. The signatories are Dewan Bahadur M. Ramchandra Rao, Professor G. R. Abhyankar, and Mr. P. L. Chudgar.

The memorandum states that the Indian States Peoples' Conference was held in Bombay last December and attended by seven hundred delegates from all the important States, including seventy States whose rulers are entitled to receive salutes.

The organisation, which is intended to be a permanent body, occupying a position analogous to that of the Indian National Congress and other political Associations in British India, has been formed for "the common purpose

of influencing the Governments of the States as a whole to initiate the necessary reforms in their administration by the force of the collective opinion of the people of the States."

Regret is expressed that there has been no opportunity to submit oral evidence. The general secretary was informed in February last that the Committee was not empowered by its terms of reference to deal with the relations of the Indian States and their subjects. Later, it was intimated that the Committee would be willing to receive a memorandum from the conference on matters coming within the terms of reference.

The advocacy of self-governing institutions for British India by some of the Princes and the continuance of unmitigated autocratic rule in their own States," it is contended, "are not reconcilable courses of conduct." The relations between the rulers and their subjects are discussed at length, and finally the signatories submit that their object "is to secure fundamental changes in the present system of administration in the States as a whole."

INDIAN NOTES.

(Continued from page 635).

proposed, should then be distributed among the provinces proportionally to the percentages collected in their territories for expenditure on projects approved by the Government of India, with the advice of an elected Standing Committee of the Central Legislature. On the basis of the figures for 1927-28, the amount originally available by this means will be Rs.62 lakhs, but will ultimately be very much larger, as consumption is stated to be increasing at the rate of 30 per cent. per annum. The oil companies, as we indicated when the suggestion was first advanced, have already signified their willingness to co-operate and act as agents in the collection of the duty. As the Committee's main findings have been common property for some months past, interest in the report would have been greater had its somewhat belated publication been accompanied by an indication of the Government of India's own attitude towards proposals which, on the financial side, at any rate, are, we believe, without precedent in the history of the Indian fiscal system. Apparently this is likely to be withheld pending the Conference of provincial Ministers which is shortly to be convened to discuss the report, the reason being that, as we have previously observed, roads is a provincial transferred subject under the administration of Indian Ministers of the Provincial Councils.

India and South Africa.

Any lingering hope that the recent decision of Mr. Srinavasa Sastri to relinquish his appointment as representative of the Government of India in the Union of South Africa at the beginning of next year was not final will be dispelled by the announcement last week that Sir K. V. Reddi has been officially appointed as his successor. Although the news of Mr. Sastri's retirement has been received with the greatest regret and a real sense of impending loss throughout South Africa, it cannot be denied that he has thoroughly earned his relief. He went, it will be recalled, to South Africa in the first instance in circumstances which involved considerable self-sacrifice and only under the stimulus of a strong sense of public duty. At the express wish of the Indian Government, and as a Cape newspaper happily expressed it recently, "in compliance with hopes common to all sections in South Africa," he agreed to an extension of his term by six months. In this, as in every other way, he has been better than his original undertaking, for he has accomplished certainly more than he promised, probably more than he dared hope, or at any rate seemed humanly practicable at the time of the Cape Town agreement. It is at the same time true that if his success in his difficult office has been

notable, it has also been largely a personal triumph for one who represents all that is best in Indian political life, and the selection of a successor enjoying the same rare combination of qualities must have presented very great difficulties. The choice has fallen upon Sir K. V. Reddi, and the decision will, we think, command general approval. One of the most gifted and eminent members of the non-Brahmin community, the new representative, who has always taken a keen interest in the welfare of Indians overseas, was recently in this country following his appointment as one of India's delegates to the last session of the League of Nations.

The New Law Member.

Like Mr. S. R. Das, his immediate predecessor, Sir Brajendralal Mitter, the new Law Member of the Viceroy's Council, is a well-known Calcutta barrister. He belongs to one of the oldest Kayastha families in the city, and he was educated at the Presidency College, graduating at the Calcutta University. He is a member of Lincoln's Inn, and has been practising in the Calcutta High Court for a good many years. Even in his early days in the Court he was known for level-headed common-sense and practical ability. And with time and experience he has developed into a thoroughly competent lawyer and advocate. Indeed, so fully is his ability recognised that, for some years past, he has been engaged in every case of first-class importance which has been heard in Calcutta. Long experience as a leader at the Calcutta Bar is a sound training for the office of Law Member. For the work of the Court is so varied and extensive that a barrister who is constantly engaged in it acquires an altogether exceptional acquaintance with the practical working of most of the more important statutes. It may be safely anticipated, therefore, that Sir Brajendralal, who has profited to the full by his experience at the Bar, will be a success in his new post. It should be added that, after a period as Standing Counsel, he succeeded the late Mr. Das as Advocate-General three years ago. And his record shows that he has worthily maintained the traditions of that difficult office. Sir Brajendralal has never been distinguished as a politician, his work at the Bar having largely monopolised his time and attention. He is, however, understood to be in sympathy with the Moderates. He was knighted last New Year's Day, and it was generally agreed that he had well earned the honour. Lady Mitter is a daughter of a well-known former member of the Geological Survey of India, Mr. P. N. Bose, and she is a granddaughter of the late Mr. R. C. Dutt, who was one of the first Indian members of the Indian Civil Service, and who later served with distinction as Diwan of the Baroda State.

SIR MALCOLM HAILEY.

An Indian Office communiqué announces that the Secretary of State for India in Council has granted Sir William Malcolm Hailey, K.C.S.I., C.I.E., I.C.S., Governor of the United Provinces, leave of absence for urgent reasons of private affairs for four months, as from December 22.

The King has been pleased to approve that Mr. George Bancroft Lambert, C.S.I., I.C.S., shall act as Governor of the United Provinces during Sir Malcolm Hailey's absence.

The Rt. Hon. Syed Ameer Ali, P.C., C.I.E., of Cadogan Place, S.W., and of Pollingfold Manor, Rudgwick, Sussex, the first native Indian member of the Privy Council and a leading Indian Muslim, formerly Chief Magistrate at Calcutta, afterwards a Judge of the Indian High Court and a member of the Imperial Legislative Council of India, who died on August 3, aged 79, left unsettled property in England of the gross value of £4,535, with net personalty £4,370. He left a selection of his books to the Library of the Royal Asiatic Society.

GEORGIA.

On November 22, at Burlington House, Mr. W. E. D. Allen lectured to the Central Asian Society upon "Two Journeys in Georgia." Lord Allenby was in the Chair, and, before introducing the lecturer, made the announcement that, owing to his appointment to the High Commissionership of Iraq, General Sir Gilbert Clayton was obliged to resign from the Council of the Society.

The lecturer (who illustrated his address with some excellent slides of Georgia lent by Mr. J. F. Baddeley) first explained that his remarks were based on two journeys to Georgia, one made to the Georgian Soviet Republic in June and July, 1926, and the other to the Georgian districts lying within the Turkish frontier in May and June of the present year.

Georgia, a country about the size of Norway, had a population of between 2½ and 3 million people. Mingrelia, or Western Georgia, enjoyed a "Riviera" climate; Eastern Georgia was higher and drier—hotter in summer and colder in winter. Except for the river-valleys, the country was mountainous, and therefore fitted for a pastoral rather than for an agricultural life.

The Georgians Mr. Allen compared with the Basques. They were a mountainous people lying upon the sea; they were divided between two foreign Powers; industrialism did not appeal to them; they were fine soldiers; they had great tenacity of national life; they evolved their own national institutions, yet failed to maintain them against two powerful neighbours. Neither the Georgian nor the Basque language could be related to any of the four great groups of languages.

The Georgian people were simple, intelligent, and gay. Their character was exemplified in their rich and ancient literature (Mr. Allen compared the beautiful Georgian works of the twelfth century with contemporary Persian classics).

The lecturer then described various parts of Georgia. He journeyed from Moscow to Vladikavkaz by railway. His description of life at Vladikavkaz, and the Russian disillusionment there at the failure of the General Strike in England caused considerable amusement. The journey to Tiflis was made in a Fiat, along the Military Road. Tiflis itself, a town founded by the Persians, was unique. Mainly a Georgian town, it had Persian, Tatar, and Armenian elements. It was entirely friendly and unself-conscious.

But the real Georgia was outside Tiflis, in the country towns where Russian could be but rarely heard. The valley of the Kura, Zagaz, Casp, Ouplis-tzikhe, Gori, and Kutais (the capital of Western Georgia) were then described.

Kutais was a very ancient site of human settlement—dating back, probably to the copper age. In this neighbourhood there were many evidences of the close relations which Georgia had with Byzantium in the eleventh and twelfth centuries.

Southern Georgia consisted of a confused mass of mountains split into two by the upper valley of the Kura. A branch line of the Trans-Caucasian railway penetrated this upper valley as far as Borjom, but after that nothing but indifferent roads and tracks led on to the Turkish frontier. Borjom was a sort of local Karlsbad. After it, on the way to the frontier, came Atskhur and Akhaltzikhe. In this region were Georgian-speaking Mussulmans—people who were forcibly converted in the beginning of the 17th century from Christianity to Islam. In 1921, by the Treaty of Kars, all Mussulman Georgia was ceded to the Turks, except the strip of territory lying between Akhaltzikhe and Batum. This district was made by the Soviet Government into the independent province of Ajaria, whose inhabitants, now fanatical Mussulmans, congratulated themselves on being free from Mustapha Kemal Pasha's "hat-decree!" All this border land was full of the ruins of old churches and castles. At Akhaltzikhe, Mr. Allen went on, he had the curious experience of having "God Save the King" and "Tipperary" played in his honour. This courtesy was, he claimed, typical of the good-natured, easy-going character of the Russians, and was illustrative in its small way of how artificial was so much of the ill-feeling existing between Russia and England.

To get to Turkish Georgia the lecturer went from Batum to Trebizond, thence by car to Riza, thence by fishing boat to Khopa, and thence he rode up over the mountains to Borchka and Artvin. Further than this he could not go, as the Turks treated all the country south of the Chorokh and east of the Euphrates as a special military zone. The coast lying between Riza and the Russian frontier was inhabited by the Lazes, strong Mussulmans who were apt to resent the reforms of the Kemalist Government. At Riza the lecturer saw a bride kidnapped by force—by two men in a Ford! Coastal Lazistan was a Garden of Eden. Khopa, a little fishing village, would grow in importance, because by the new frontier the Chorokh valley had been deprived of Batum as a port, and the Turks were developing Khopa as a port for Artvin, Ardahan, and even for the Kars region. This country of the Chorokh valley was, however, never so poor and wild as it was to-day. It had a great history, and archaeological excavations in it would certainly bring to light many unknown chapters of the history of the Middle East.

Mr. Allen then touched upon the present political situation of the Georgians. The Georgian-speaking districts of Turkey could be left out of the picture. But what of the rest, the nine-tenths of the Georgian nation, under Soviet rule? They had an ancient culture, a fine language and literature, and a strong tradition of independence. That independence they lost finally in 1801, since when they have formed part of the Russian Empire. The Russians brought many benefits, but the Romanoffs, like the Hapsburg Emperors and the Ottoman Sultans, failed to weld out of the nationalities under their rule a coherent State which could survive modern conditions. The War resulted in the collapse of the artificial structure of the Romanoffs, the Hapsburgs, and the Ottomans. The Romanoff Empire was not an inevitable development: it was essentially a political combination like the Spanish and Hapsburg Empires.

In Russia there was a normal expansion to the Black Sea and the Baltic, and across Siberia to the Pacific. But the conquest of Poland, Finland, and Georgia in the eighteenth century was imperialism in its worst form—equivalent to English conquests in France, or French conquests in Italy.

When the Romanoffs collapsed, the subject peoples established governments of their own. The Poles, the

Finns, and the Baltic nations survived, but the Caucasian peoples did not. This was due to the fact that circumstances of international politics did not happen to favour Georgia and her neighbours. But the re-occupation by the Russians of the Caucasus met with very considerable resistance in Georgia and Daghestan, and in Georgia there was guerilla fighting until 1924.

What of the future? There were two alternatives. First, the Bolsheviks had attempted to conciliate national feeling among the Ukrainians, Georgians, Armenians, and other national groups by the establishment of autonomous Soviet Republics. If this system were developed generously, a federation of all the national groups of the former Russian Empire might develop along comparatively satisfactory lines. But secondly, some crisis in Russia might give the national groups an opportunity to recover their complete independence. In this event, it was possible that the Georgians, together with the Tatars of Azerbaijan and the Armenians, might establish an independent Caucasian Confederation, which could be a stable element in Middle Eastern politics. The independence of these Republics should not be regarded as impracticable or as a danger to international peace. Such States as Switzerland, Holland, and Denmark showed that small States could be an element for peace, and could make original contributions to civilisation.

After the lecture General Sir Raleigh Egerton asked whether the oil at Baku would not be an insuperable obstacle to the Confederation which the lecturer had suggested; but Mr. Allen thought commercial treaties could be devised to give the Russians all that they needed in that direction.

ISLAMIC INFLUENCES ON THE ARTS OF EUROPE.

(From a Correspondent.)

At the International Congress of Orientalists recently held at Oxford, one of the most interesting lectures was that of Mrs. Devonshire on "Islamic Influences on the Arts of Europe."

After emphasizing the fact that, in the Middle Ages, there actually existed colonies of Oriental craftsmen at Venice, Ferrara, Pisa, Palermo, Cadiz, and so on, the lecturer proceeded to enumerate objects in every branch of art which betrayed undisputed Oriental inspiration, or influence. One of the most striking facts was the extensive use of Oriental textiles in the West, not only carpets but also brocaded velvets from Brusa. Evidence for this was produced in the form of lantern slides showing pictures by the great masters, in which the subjects wear either doublets or cloaks which can easily be recognized as of Oriental fabric. So numerous are such examples that it would almost appear that no one could feel really smart in the Middle Ages unless he wore at least one garment of Eastern material. Such fabrics were often decorated with bands, or *tiraz*, of Arabic inscriptions, woven in near the border, and as a result of familiarity with such inscriptions, one finds numerous examples of the use of meaningless imitations of Arabic inscriptions in the decoration of the XIIth century.

Besides ornament derived from inscriptions, there was also the well known decorative scheme of two animals affronted with heads averted, on either side of a Persian

Horn or Tree of Life. Some splendid results were achieved in the West by the adaptation of this design, examples of which were shown on the screen.

Turning to the field of Ceramics, Mrs. Devonshire illustrated the Oriental influence in Hispano-Moresque pottery, with pseudo-Arabic inscriptions and Christian heraldic devices; also the use of blue fayence wall-decoration in the Mudejar Cathedral of Saragoza, and the Cosmatesque mosaic at Ravella, near Amalfi. The importation of Hispano-Moresque pottery into Italy, led to the Italians' copying it and calling it *maiolica*, under the impression that it came from the island of Mallorca; and the importation of a Muslim potter from Valencia, laid the foundation of a pottery industry at Poitiers. Imitations were also made in Holland in the XVth century.

The inlaying of brass with gold, silver, or red copper was a flourishing art in the East in the XIIth century, Mosul being the centre of the industry; this craft was imported into Europe, craftsmen settling in Venice, among whom was Mahmud the Kurd, signed pieces of whose work still exist. The Italians learnt this art, which they called *azzimonia*.

In architecture, the Mudejar style of Spain affords the most striking example of Oriental ornament and technique surviving for a couple of centuries or more in a Christian kingdom. The lecturer illustrated a number of examples such as the Christian door of the Mosque-Cathedral of Cordova, the Casa di Pilatos, and so forth.

A number of stucco grilles from early Spanish and Romanesque churches, which were shown on the screen, had a charming and thoroughly Oriental appearance. It would also seem, from the evidence submitted, that the south European campanile was derived from the square North African and Spanish type of minaret, itself derived from the early Syrian church tower.

NEWS IN BRIEF.

The appointment of Field-Marshal Lord Plumer to be Honorary Colonel of the Inns of Court Officers Training Corps is announced in the *London Gazette*.

The King and Queen of Yugoslavia returned to Belgrade on November 19 from Paris. M. Rakitch, Yugoslav Minister in Italy, was in attendance on his Majesty during the journey between Milan and Venice.

King Zogu received M. Mihailovitch, Yugoslav Minister to Albania, at Tirana on November 19, when he presented his Letters of Credence. The Albanian Government on November 21 nominated M. Reuf Fitza as Albanian Minister in Belgrade.

In Congregation at Oxford on November 20, the Vice-Chancellor presiding, the degree of M.A. was conferred by Decree upon Mr. C. N. Seddon, Hon. M.A., Balliol, Lecturer in Persian and Marathi; and Mr. E. J. Thompson, Hon. M.A., Lecturer in Bengali.

The Jewish National Fund announces from Jerusalem that it has purchased 27,000 dunams (about 6,750 acres) of land on the coast at Haifa Bay, and that it now possesses 33,000 dunams (8,250) in this area, which is significant in view of its coming development.

Mohamed Pasha Mahmoud, Egyptian Prime Minister, on November 24 laid the foundation-stone of a new Egyptian State hospital in the suburb of Abbassia, Cairo. Shaikh Abdul Rahim Pasha el Demerdashi gave the site of the hospital and £1000,000 towards the cost. Lord Lloyd, High Commissioner, was present, and paid a tribute to Demerdashi Pasha's friendship towards Great Britain since the early days of the Occupation.

It is reported from Kabul that preparations are being made for wireless communication between Afghanistan and European countries, and for an air service between Afghanistan, Persia, and Turkey. An aeroplane association is being formed to raise money for the promotion of civil aviation.

THE WEEK AT HOME

London, Tuesday Morning.

The King's Illness.

Even the Olympian observer of human affairs cannot fail to have been affected by the display of very sincere concern which has been made all over the British Empire during the last few days in the state of the King's health. The British people, as a whole, love their King, although, to be sure, it did not need this unfortunate illness to reveal that fact. That our Sovereign may speedily recover is the hope alike of the humblest and of the greatest of us.

The New Bank Notes.

Last week the Bank of England issued new ten shilling and pound notes, and it was extremely amusing to observe the popular reaction to them. Just as nowadays some people might be suspicious if they were offered gold instead of the old "Bradburys," so the ordinary man was very suspicious of the new notes.

Artistically speaking, the count has apparently gone against the new notes. The design has been modelled, it is said, on the old American "greenback"—a gloomy reminder, the jesters state, of our debt to the U.S.A. The design of Britannia appears in basic green and red. But St. George has disappeared; the helmet and trident of Britannia are also missing. No doubt we shall accustom ourselves to these losses; but in the meantime our militarists are shaking their heads.

Penny Postage.

It is curious how, whenever the time approaches for a new Budget, propaganda, with every appearance of official inspiration, is set about in favour of a return to a penny postage. This year, however, hopes have soon been damped, for last week, in the House of Commons, Mr. Winston Churchill said definitely that there could be no penny post in the near future. The Chancellor of the Exchequer stated that its introduction would mean a loss of from six to seven and a quarter millions.

This figure has rather annoyed the protagonists of the penny post, who not only do not accept Mr. Churchill's figures, but also assert that, even were it correct, the Post Office in two or three years would certainly recoup itself through additional postage. And the cynical are asking, which would the business man prefer and which would give the more stimulus to trade—the certain advantages of the penny post or the mythical benefits of the Government's De-rating Scheme? For once, however, I rather think that the Chancellor is justified: the cure of the crying ills must be attempted first, even though a cure for the lesser ills is close at hand. Nor do I think that there would be such a tremendous increase in correspondence, if we had the penny postage again.

The Trade Relief Bill.

And that reminds me of the improvement, which one had felt was bound to take place, in the prospects of the De-rating Scheme. The Minister of Health has succeeded in quieting the critics whose activities I recently mentioned. The Minister for Health, Mr. Neville Chamberlain, has stated his belief that there will be no increase in the amount which particular districts have to pay. And, so far, at any rate, neither Labour nor Liberal critic has been able to bring evidence to the contrary.

"Coupon" Newspapers.

Those who have lived out of England for some years will have been amazed, probably, to discover the immense circulations which certain journals, the contents of which were not always of the highest or even of the most readable quality, have attained in recent years. The explanation was the football coupon competitions, which thousands entered for in the hopes of getting a monetary prize. Last week, however, such hopes were suddenly snapped: for the High Court decided that such competitions were illegal.

It was both a timely and a very sensible verdict. That a newspaper should have had circulation without readers was in itself monstrous. But this "coupon stunt" was also morally harmful. Men and women used to spend hours trying to discover the probable results of professional football matches, and there were vast organisations which sold "information" on these matches to the credulous. It was all a pitiable manifestation of the immoral hope of getting something for nothing. (I do not speak of those competitions which demanded an entrance fee: they were even more flagrantly a money-making concern on the part of the organisers.) But these competitions were in truth demoralising both to journalism and to those hopeful idiots who bought the coupons. If people want a lottery, there should be (there are) other ways of organising one than through the newspapers, whose *raison d'être* must be lost in the process which happily has just been brought to an end.

Lord Birkenhead's Way.

Lord Birkenhead was never a man to take things lying down, and the criticism which was not unnaturally passed on him (it is a criticism that I find general, except among our young materialists and realists, who, like the ex-Lord Chancellor, worship unabashed at the throne of success) that he should not, while he is making so much money out of commercial enterprises, take to himself the State pension of £5,000 a year to which he is legally entitled, has considerably fluttered the legal doves. Now it is generally invidious to discuss a man's private affairs, but since Lord Birkenhead himself has chosen to conduct his affairs in the full glare of publicity, the usual practice may be forgone.

In a letter to *The Times*, Lord Birkenhead made to Sir Henry Slesser's strictures on him in the House of Commons what some consider an effective, and other a most undignified retort. He was promptly answered in the same newspaper by Mr. Grant, whose motives were, apparently, so misunderstood by the ex-Secretary of State for India, that he imagined a possible job was waiting for Mr. Grant through the good offices of Sir Henry! This sort of repartee is, I think, vulgar in the extreme. But the "F. E. Smith" that was Lord Birkenhead will out. Such conduct as he has just indulged in is inconceivable in a man of the type of Mr. Baldwin, whose recent remarks upon "parasitical directors" might well have brought a blush to the cheeks of a man less hardened or weathered than Lord Birkenhead. To say the least, this omission to forgo a pension of £5,000 at a time when, as the whole Press has just been reminding us, many parts of Wales and other mining districts are starving, can hardly build up the noble Lord's credit in Heaven; nor, incidentally, will it assist the Party into whose counsels he unhappily succeeded a few years ago in re-establishing himself. One would like to know what, for instance, Sir Thomas Inskip really thinks about the great ex-Lord Chancellor, whose action he was forced in the Commons, if not to defend, at least to explain away.

The Cricket Championship.

All eyes are set on Brisbane, where the first Test Match will soon begin. But in the meantime cricketers are discussing the new Championship system for this country, which was recommended last week by the Advisory Cricket Committee. Briefly, it is this: that eight points shall be given for a win; that five points shall be given for a win on the first innings (mixed cheers); that the points be divided if there is no result on the first innings; and, of course, that, everybody playing the same number of games, the side gaining the greatest number of points shall be champions.

The only object of criticism is the major points given for the first innings lead. What most men would like to have laid down is the moral obligation to obtain a finish. But that, probably, is impracticable in a business community.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

November 29, 1928 (New Style).

November 16, 1928 (Old Style).

Jumada II, 15, 1347 A.H. of the Muslim Calendar.

Kislev 16, 5689, of the Jewish Calendar.

The Aga Khan will leave Marseilles on December 7 for Bombay.

Major-General Sir John Davidson, M.P., leaves England to-day (Thursday) for India.

The Earl and Countess of Selborne will leave London towards the end of next month for Egypt.

Sir John and Lady Cadman left Southampton on November 24 in the s.s. Aquitania for New York.

Lord Russell of Liverpool left London on November 22 for Marseilles to join the s.s. Narkunda for Bombay.

Sir John Chancellor, High Commissioner for Palestine, and Lady Chancellor are leaving to-day (Thursday) for Jerusalem.

Sir Archibald and Lady Birkmyre and Mr. and Mrs. Henry Birkmyre leave London to-day to join the s.s. Rawalpindi at Marseilles, on their way to Calcutta.

Major-General Sir Harry and Lady Watson left London on November 22 for India, joining at Marseilles the following day the s.s. Narkunda, in which Sir Maneckji and Lady Dadabhoy, Sir Stanley Reed and Sir Valentine Chirol are also passengers.

The English-Speaking Union will entertain Field-Marshal Lord Allenby and Lady Allenby at dinner on their return from the United States, at Grosvenor House, Park Lane, on Monday, December 3. Mr. Lloyd George will preside.

Sir Prabhaskanakar Pattani, who was summoned to England to assist in the conference of Indian Princes and Ministers in connexion with the Indian States Inquiry, embarked on November 23 in the Narkunda at Marseilles for Bombay.

His Excellency Jaafar Pasha al-Askari (who presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Iraq), and His Excellency Monsieur Nicolas Titulesco (who presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Roumania) were received in audience by the King at Buckingham Palace on November 21.

The Basrah correspondent of *The Times* reports that the Shah of Persia left Muhammarah on November 24 in a British India mail steamer for Bushire and would probably visit Khor Musa, the proposed terminus of the trans-Persian railway on the Gulf later. It is also possible that his Majesty may extend his tour into Persian Baluchistan.

THE CHURCH OF ST. GEORGE AT TROODOS, CYPRUS.

WANTED!

A permanent church on Troodos for the needs not only of residents (military and civilian) but of the visitors who are coming in growing numbers each year to this popular hill station of the Near East.

It is proposed that a stone building be erected on a site, to be allocated by the War Office, near the Parade Ground, at a cost now estimated at £800.

The Special Committee includes H. Ll. Jones, Esq., Major L. F. Layton, O/C Troops, Norman Petrides, Esq., Dr. A. H. Unwin, Henry Williamson, Esq., and the Chaplains of Nicosia (Rev. H. Buxton) and of Limassol (Rev. L. Lindsay).

The Managing Director of the Cyprus Ambestos Co. has kindly promised a generous cash contribution and also building materials produced by the Company at exceedingly low price.

Contributions should be sent direct to the TROODOS CHURCH FUND, c/o H. Ll. Jones, Esq., Ottoman Bank, Nicosia.

BRITISH ART IN YUGOSLAVIA.

The Yugoslav Society of Great Britain, in combination with local committees in Yugoslavia, has organized an Exhibition of British Works of Art during the coming winter at Liubliana, Zagreb and Belgrade. British Artists' Exhibitions, of which the founder is Sir Joseph Duveen, and the Chairman Sir Martin Conway, M.P., have kindly arranged for the loan to the Yugoslav Society of a selection from the works of art which have recently been on exhibition in the British Pavilion at the Venice International Exhibition. These works of art include oil paintings, water colour drawings and sculpture, and are representative of most of the leading British artists of to-day, and of the various tendencies of modern British art.

The first of these exhibitions was opened on Sunday, November 25, at Liubliana, in the presence of the British Minister to Yugoslavia and the leading local notabilities, and it is hoped that these exhibitions, which are arousing great interest in Yugoslavia, will promote closer intellectual relations between the two countries.

The death occurred on November 16 of the Rev. Charles Swynnerton, Indian Chaplain (ret.), F.S.A., whose recently published book, "Romantic Tales of the Punjab," was reviewed in *THE NEAR EAST AND INDIA* on November 15.

M. Naoum Peleff, a former Chief of Police of Sofia, was shot by two unknown men on November 21 in his office, and died an hour later. The men entered the outer office, where they stabbed a clerk, and then fired at M. Peleff and escaped.

Book Reviews

A BORN DIPLOMATIST.

"MY WAR MEMORIES." By Dr. Benesh (London: George Allen & Unwin Ltd. 21s. net.)

It is to be hoped that the great length of this book, its portentous solemnity and its very liberal use of the personal pronoun, first person singular, will not deter the general public from reading and studying an extremely fascinating record. After all it is no longer than it had to be; indeed it is shorter than its original. It had to be solemn, for it treats of solemn things exclusively, of the creation of a new free nation. If "I," "me" and "my" are very freely sprinkled about the pages, it has to be remembered that what the author has set out to do is to narrate his own doings, such narration to be read alongside of those of Professor Masaryk and others.

"Work which creates, work which challenges, has always been my element." It was fortunate that Dr. Benesh could say so truthfully, and fortunate for his people that they were blessed with a man so gifted. "It was my belief that truth would prevail, but I did not expect it to prevail unaided." "We had to thrust our cause into the main streams of world events, in the midst of which it would become too important a factor to be ignored." These two short extracts give an idea of the spirit in which Dr. Benesh's work at Paris was done. Arriving as a young University teacher, who was a revolutionary refugee from the territories of an enemy country, gradually, by clinging to acquaintances made in past days, he managed to get on terms of discussion with others, until the Press and finally the ears of Ministers were reached. From that stage, which was not easily attained, it was comparatively plain sailing to secure, first personal, and then diplomatic recognition, and it was then not long before the proud day came when he and his fellows were recognized as the Provisional Government of a State, still in the hands of the enemy, but clearly earmarked for surrender to its new masters. Not only that but, by virtue of the army which actually existed, largely owing to Dr. Benesh himself, they were also recognized as active belligerents, allies and, as such, entitled to take part in the Peace negotiations. None of these events occurred by chance. Every one was carefully worked up to, and the ends were all along clearly kept in view. The success they had was the success due to good and permanent work.

In a few lines it is impossible to call attention to more

than a few points, and readers must be referred to the book itself for details. These they will find intensely interesting and instructive. One great virtue possessed by the author is the ability to look at events with the eyes of others. This enables him to write sympathetically of Baron Sonnino and others who stood in his way. Even the attitude of the Allied Powers to the tentative Austrian proposals for peace, though the carrying of them through would have meant the end to all his hopes, never seems to have succeeded in preventing him from appreciating their point of view, while he comforted himself with the reflexion that the "philosophy of history" made such success impossible. Of statesmen with whom he worked he has left many lively little sketches. Those of Lord Balfour and Lord Cecil are excellent. His energy and industry can hardly be believed were it not that it was only such energy and industry that made the results possible. For five years he appears to have had no rest or relaxation for body or mind; while the circumstances in which he had perforce to live did not help him to husband his strength.

"In spite of the passing difficulties which were encountered at the Peace Conference between the Yugoslavs and the Roumanians on the subject of the Banat, and between the Roumanians and ourselves regarding Carpathian Ruthenia, the co-operation during the War prepared the ground for that post-War Little Entente policy at which Masaryk and the rest of us had been systematically working since 1917." The Little Entente was, then, definitely in his eye even before the War ended, and Masaryk and he got their way here too. The question whether this particular success has been in the long run a gain to Europe will not receive in every quarter the answer that Dr. Benesh will give it. The Little Entente has undoubtedly been of great advantage to Czechoslovakia; its value to the two other countries, thereby drawn into the vortex of Central European politics to which they do not belong, is problematical, and it would seem as if the only factor that now keeps the Little Entente in being is the lack of courage on the part of both of these Governments, in hesitating to acknowledge that it is a hindrance to their development in the sphere where their real interest lie, in South-Eastern Europe. Dr. Benesh does not appear to have any illusions as to the dangers threatening the State which he has done so much to create. We wish that we could think that in his extra-Czechoslovakian activities he has taken the best means for combating these threats.

It should be added that the translation of the book is very well done and that the publishers have taken seriously their duty to present the book in a manner befitting its value, even down to its symbolic green binding.

C. S-W.

EASTERN COUNSEL.

"HITOPADESA: THE BOOK OF WHOLESOME COUNSEL." Edited by Lionel D. Barnett. (London: Chapman and Hall, 21s.)

The series of translations into English of Eastern wisdom is constantly growing, but we doubt whether any will surpass the series known as "The Treasure House of Eastern Story," of which "Hitopadesa" is the first volume. To begin with, it is under the general editorship of Sir Denison Ross, who certainly has a flair for the less known works and the by-ways of Oriental literature. And secondly, it is being most beautifully published by Messrs. Chapman and Hall, who have made an excellent choice of the Westminster Press to print the books; so that the translations, almost apart from their content, are a physical delight to read. Among the volumes that are promised to accompany "Hitopadesa" we note with particular interest that the book of Hayy Ibn Yaqdhan by Abu Bukr Ibn Tufayl is one, and that a selection from the Masnavi of Jalal-ud-Din Rumi is another. Another,

Calcutta, Delhi, Simla, Lahore, Rawa
Pindi and Murree

selections from the Gulistan and Bustan of Sa'di, has already been published, and will be reviewed in THE NEAR EAST AND INDIA in due course.

This version of "Hitopadesa," which, by the way, contains as frontispiece a finely fantastic animal group by Cynthia Kent, is based on the translation from the original Sanskrit by Francis Johnson, but it has been revised and in part re-written by Mr. Lionel Barnett, the eminent Keeper of the Department of Oriental Printed Books and MSS. in the British Museum.

Readers of the famous Sanskrit tales and fables known as "Pancha-tantra" will know very well the sort of book that "Hitopadesa" is. Into the mouth of animals of the lower creation are put the precepts of human kind, for into the Hindu the principles of, say, statecraft, could be more easily instilled in this elementary form. The device is, of course, as old as Time and as new as To-day: it never fails to delight. Through the medium of crows, tortoises, deer, tigers, jackals, elephants, and so on, we are instructed on "The Acquisition of Friends"; through bulls, lions, monkeys, asses, serpents, and the rest, we learn of "The Separation of Friends"; through geese, peacocks, ganders, and rabbits, we gain knowledge of "War"; and the arts of "Peace" we discern through turtles, cranes, mongooses, crabs, frogs, goats, and what-not. It is in the second chapter that we meet again those two charming jackals, Karataka and Damanaka, who are familiar to readers of the original "Pancha-tantra."

Quotation from such fables is difficult, for one precept leads on to its homely illustration and thence to precept and illustration again; so that there are, actually speaking, few examples of finality that could fitly be quoted. But here are a few of the memorable axioms:—

Even without riches a valiant man attains a rank of honour and elevation; a mean wretch, though well endowed with wealth, comes to a station of dishonour. Can a dog, although wearing a necklace of gold, acquire the splendour of a lion, which springs from nature, and consists in possession of a collection of virtues?—(From "Acquisition of Friends.")

And this is how Damanaka, in "Separation of Friends," destroys the Absolute:—

Is anything naturally beautiful or not beautiful? If aught pleases anyone, to him it will be beautiful.

Observe the realism of this precept, taken from the section on "War":—

A King should duly appoint for his minister a native of his own land, faultless in the observances of his caste, of tested integrity, familiar with sciences, not addicted to vice, free from loose habits, one who has studied the departments of law, renowned, of ancient family, clever, and able to raise money.

And who could quarrel with the tone of this, taken from "Peace"?—

What dexterity is there in deceiving those who have come to trust in one? What manliness is there in killing him who has climbed into one's lap and fallen asleep there?

Enough has, perhaps, been shown to illustrate the wisdom of these fables: to indicate their homely and most attractive setting were impossible. It is one of the mysteries of mankind that their originator died an unknown man, for all that is certainly known of the author of "Hitopadesa" is that he lived between the eighth and fourteenth centuries. It is presumed, however, that he lived under the Pala dynasty of Bengal, probably, as Mr. Barnett says, between the ninth and twelfth centuries. However that may be, immortality is assured for his tales; and we should end, as we began, in thanking Messrs. Chapman and Hall for their enterprise in publishing this series of Eastern treasures, and particularly for their worthy presentment of such treasures.

The Duke of the Abruzzi, a cousin of the King of Italy, and a well-known explorer, has returned to Addis Ababa after having found the source of the Webi Shebeli River, which is stated to be in the Sidama district.

R.A.F. APPOINTMENTS.

The following appointments in the Royal Air Force are notified:—
Wing Commander.—J. McCrae, M.B.E., to Armoured Car Wing, Iraq, to command (October 21).

Squadron Leaders.—J. J. Breen, to No. 84 Squadron, Iraq (October 22); F. J. Vincent, D.F.C., to No. 45 Squadron, Middle East East (October 30); J. H. Green, to Headquarters, R.A.F., Trans-Jordan and Palestine (October 27).

Flight Lieutenant.—W. J. Seward, to Headquarters, Iraq Command (November 15).

Flying Officers.—T. B. Prickman, to No. 45 Squadron, Middle East (October 27); M. A. Platts, to No. 2 Armoured Car Company, Middle East (October 30); C. Warsaw, to No. 14 Squadron, Middle East (November 3).

Pilot Officers.—G. E. E. Singleton, to No. 14 Squadron, Middle East (October 27); D. Menzies, to No. 45 Squadron, Middle East (October 28).

The following are posted to No. 4 Flying Training School, Middle East, with effect from November 15:—A. H. Abbott, F. S. Barron, A. G. M. Cary, C. B. Field, E. G. Granville, N. R. G. Hunter, R. I. Johnson, H. L. McCulloch, R. M. Messiter, G. F. P. O'Farrell, O. J. O'Hara, C. E. W. N. C. Pelly, C. Sarsfield-Samson, R. W. Wallace, T. E. Whittome, A. C. R. Mackenzie, E. C. Ridler.

Stores Branch.

Flying Officer.—E. G. M. Charleson, to No. 4 Flying Training School, Middle East (October 30).

Medical Branch.

Squadron Leader.—R. J. Aherne, M.C., to Palestine General Hospital (November 1).

Flight Lieutenants.—E. J. Jenkins, to No. 14 Squadron, Middle East (November 1); R. G. Freeman, to R.A.F. Depot, Middle East, instead of to Headquarters, Middle East, as previously notified (October 20).

M. Pappas, Greek Minister to Turkey, arrived in Angora on November 19.

Sir James Beethom Whitehead, K.C.M.G., of Efford Park, Lymington, Hants, late British Minister to Serbia, formerly serving in St. Petersburg, Rio de Janeiro, Berlin, Tokyo, Brussels, and Constantinople, died on September 19, leaving estate of the value of £160,122, with net personalty £120,656.

CAMBRIDGE BOOKS

CAMBRIDGE HISTORY OF INDIA

"Cambridge by successive great series has put itself past challenge as historiographer of all the world ancient and modern. Eminent amongst these team-works, and, perhaps, the most urgently needed of them all, is the "History of India," which quite supersedes all previous accounts, both in fullness and authority."—*The Observer*.

Vol. III. Turks and Afghans, edited by Sir Wolseley Haig, K.C.I.E., is now ready.

With 104 illustrations and 8 maps. Royal 8vo. 42s net. (Volume II, Medieval India, is in preparation; Volume I, is already published, 42s net.)

RABI'A THE MYSTIC AND HER FELLOW SAINTS IN ISLAM

By *Margaret Smith, M.A., Ph.D.* Demy 8vo. 10s 6d net

This work represents the first complete biography of the Muslim saint, Rabi'a of Basra, a unique personality in Islamic mysticism in the eighth century. Part I gives an account of her life, Part II is concerned with her teaching and writings, and Part III deals with the place in Islam of women in general and women saints in particular.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania and Foreign Enterprise.

M. Maniu, the Roumanian Premier, has lost no time in explaining the attitude of the National-Peasant Party to foreign enterprise and foreign capital. As I pointed out in these columns recently, it was made clear at the recent "Parliament" of the Party that a view diametrically opposite to that of the then Government was taken on this question, but opinions expressed in Opposition are not invariably translated into action when the world is viewed from the Government benches; but while there was little doubt that the National-Peasant Party would reverse the Bratianu policy which led nowhere, it is none the less satisfactory to have the whole-hearted statement of M. Maniu that it is hoped that foreign experience and capital will find as large a field as possible in Roumania. It now remains for the Maniu Administration to pave the way for foreign assistance to the country by such steps as the removal of restrictions on the employment of foreign capital and the modification of the Mining Law. The decision of the Government to follow its predecessor in the matter of the negotiations for a loan will no doubt be generally approved. The points in favour of a loan issued under the auspices of the League of Nations are obvious, but the disadvantages are equally clear also. Roumania wants the loan at once, so that progress may be made as quickly as possible in the work of reconstruction.

The Sudan's Dura Harvest.

As I have pointed out in these columns, recent trade statistics throw a most encouraging light on developments in the Sudan. It would be unwise, however, to base too great expectations on the fact that both imports and exports are steadily expanding. The Sudan, it must be remembered, has only recently passed through a very severe economic depression, the main cause of which, it will be recalled, was the failure of the dura crop. Last year's dura crop was a very good one, and the development of the import trade this year is largely the reflection of this result, but beyond allowing the re-export of certain quantities of imported dura, the Sudan Government has not yet raised the embargo on the export of this commodity which has been in operation now for three years. The latest news regarding this season's dura crop is not so promising, as it is said to be below the average. That will probably mean a continuance of the embargo.

The New Sudan Railway Extension.

Much is hoped for the extension of the railway from Gedaref to Sennar, as the line will tap a particularly fertile region of the Sudan, the development of which has hitherto been hampered by the absence of communications. This extension is to be finished by February 1 next, and it will thus be able to deal with a fair amount of traffic before the rains begin. Apart from its value to the region it actually passes through, the line will be available for traffic from El Obeid destined for Port Sudan. A portion of the Gezira produce should also use this route. The value of this development will be that the congestion existing on the Wad-Medani-Khartoum-Atbara line will thus be relieved.

The Bulgarian Loan.

As was to be expected, the Bulgarian Stabilisation Loan was quickly over-subscribed. Previous experience

with issues made under the auspices of the League of Nations suggested that the loan would open at a premium, and no doubt the demand for the loan was to some extent due to that belief, but as a matter of fact when dealings opened on Monday a small discount was established, which is presumably to be attributed to reports forthcoming in the last few days of disturbed conditions in Bulgaria. It is not to be expected that the loan will long remain under par, for there is little in the record of Bulgaria in the last few years to cause misgiving as to the country's progress. In the British Consular Report on Bulgaria, which has made a particularly timely appearance at this juncture, and extracts from which will be found elsewhere in this issue, reference is made to the improvement in the economic situation of the country in the past year, to which a Budget surplus and a satisfactory crop contributed. The loan now concluded will certainly not mean for Bulgaria the beginning of a prosperous period, but it will mean that the country will now be better situated to face the task of the continuance of reconstruction in which by sheer determination it has already achieved substantial progress. Apart from the actual financial help, the loan is further a distinct moral asset to Bulgaria, as it marks the definite establishment of relations with other countries and cannot fail to give Bulgaria the feeling that she is no longer ploughing a "lonely furrow."

Limitation of Exhibitions.

There has been an enormous increase in the number of trade fairs and exhibitions in Europe since the War, and while many of them fulfil a useful function, it is probable that at least half could be dispensed with without any adverse effect on trade development and to the general benefit of manufacturers whose representation at the various fairs and exhibitions has now become a very expensive business. The International Exhibitions Conference, which has been meeting in Paris, has been considering the question of the limitation of these events, but it is to be feared that the convention drawn up by that body will not greatly contribute to that end, for the Conference decided to deal only with events of three weeks' duration or more and to leave the question of smaller international exhibitions and trade shows (which form the bulk of these events) for consideration at a later date. It would surely have been better, one would think, to have taken advantage of the Conference to come to a clearly-

carry your
message to the
markets of the Near
and Middle East. You
will find it a paying
proposition

defined decision on the whole question. It goes to show the weakness of these international meetings that it should be necessary to approach a matter, which hardly holds out much promise of controversy, in such a delicate spirit.

Near East Tariffs.

It is in the Balkans that trade restrictions have been most in evidence since the War, and while some of the countries in that region have shown signs of mending their ways, it cannot be said that the general tendency in the Near East at the present time is towards freer trade. In some cases, indeed, the trend is definitely in the opposite direction, and that fact makes one despair of the possibility that the resolutions passed at Geneva will be carried into effect in the near future. The new Turkish tariff is a case in point. In view of the enthusiasm that the Angora authorities have shown in the creation of a new Turkey it was only to be expected that the tariff would be a thorough and very comprehensive instrument of policy. Details of the tariff, which after approval by the Government has to undergo the formality of consideration by the Grand National Assembly at Angora, are not yet available, but the object for which it has been framed is the adequate protection of existing Turkish industries and of industries which are capable of being established. The tariff which it will presently supersede is declared to be inefficient as a protection for Turkish trade, which affords an indication as to the nature of the new dispensation. It is not my intention specially to criticise Turkey for her protectionist policy (that, I think, is by far the best phrase to describe the development of trade restrictions), but merely to illustrate the fact that the passage of pious resolutions at conferences at Geneva is not likely in the circumstances to get us much farther. The tendency to increase tariffs and to maintain and extend trade restrictions of various kinds is clearly solely due to the conditions brought about by the War—conditions which have imposed, and are imposing, on various countries the need to utilise to the full economic weapons to enable them to obtain the necessary markets to afford employment for their citizens. In the case of Turkey the real ground for criticism is that those in authority lack the requisite experience, and the new tariff is therefore quite likely to have some unexpected consequences.

Bengal-Nagpur Railway.

At the meeting of the Bengal-Nagpur Railway Mr. Robert Miller, the Chairman, was able to give a very satisfactory account of the working of the line for the past year. Twelve months ago a decrease was recorded in the gross earnings following a series of increases, but this time the upward movement has been resumed, and at Rs.9,16,23,492 the gross earnings constitute a record. Coal is the principal commodity carried by the railway, and it is interesting to note that five-eighths of the increase in the goods traffic was in respect of general merchandise. Naturally this wide movement of traffic is very significant as to the economic development of the region served by this railway. An interesting point made by Mr. Miller is that China has become a consumer, and bids fair to become a large consumer, of Indian coal. Hitherto China has been a large purchaser of Japanese

coal, and Mr. Miller is of the opinion that if the coal owners of Bengal utilise their opportunity the demand for this coal will not only be permanent but will increase.

COMMENTATOR.

MOTORS IN THE RED SEA DISTRICT.

The total of 1,928 automobiles were registered on January 1, 1928, in the 11 small countries comprising the Aden consular district (says the American Vice Consul at Aden, Mr. James L. Park, in a recent report); of this number 65.34 per cent. are American.

The colony of Eritrea, being almost entirely Government-supported, shows an automotive activity which is interesting, for of the total of 134 motor vehicles, only 12 are government-owned. This is due to the very good road between the port of Massawah and the capital, Asmara, over which there is constant passenger and freight traffic, and to the high railway freight rates. Passengers, too, avoid the railway whenever possible.

In addition to the usual number of used cars shipped from Aden to Mokalla, in the past year there have been imported a surprising number of new cars, transhipped at Aden and handled by Aden merchants. The Sultan of Mokalla has given the trade every encouragement. The country lends itself well to the use of cars, even without roads, and its agricultural commerce, under the Sultan's progressive policy, would indicate a rapid increase in imports. It is a country well worth watching from the automobile standpoint, mainly because the people themselves are interested in motor transport, and their purchasing power is probably at present higher than that in any other part of Arabia.

Passenger cars and buses are imported into Hijaz almost entirely for the pilgrim traffic between Jidda and Mecca.

Asir, like Yemen, is not of any particular interest, and its 20 cars are old. These cars are for individual use by the governing officials and the wealthier merchants. Arabs of this section of the world are inclined to look upon cars more as temporary playthings than real economic necessities.

There are no motor vehicles of any description in the Sultanate of Oman; there are no roads to accommodate them, but in many parts of the peninsula built roads are hardly necessary for other than heavy traffic. A car can follow a camel caravan route with comparative ease, but encounters considerable difficulty in any irregular portion of the terrain. Oman is not rich or important.

The Palestine Official Gazette of October 16 contains the draft of an Ordinance to amend the Tobacco Ordinances, 1925-27, containing, *inter alia*, the following provisions with regard to the importation, etc., of cigarette paper:—No person shall import into Palestine cigarette paper unless he shall previously have obtained a licence from the Director of Customs for such importation in the manner prescribed. No person shall convert tissue or other paper into cigarette paper or use tissue or other paper for the purpose of smoking tobacco. Every person who at the date of this Ordinance is in possession, for the purpose of sale, of cigarette paper, whether manufactured in Palestine or imported, shall forthwith notify the Excise Authority of the amount of such cigarette paper in his possession. The Government shall have the option of purchasing the paper at cost price or of marking it with the Government stamp.

GLASGOW

Irrigation in Egypt

Under its present Government Egypt is on the threshold of important developments in irrigation. An international Commission of three members is at present engaged in examining the various plans for the heightening of the Aswan Dam; a decision regarding the project for a dam at Gebel Aulia, south of Khartoum, is also not likely to be long delayed, and, in addition, to the completion of the Nag Hamadi Barrage, begun in November, 1927, various improvements in existing drainage and irrigation systems are being undertaken. All these works have an important bearing on the prosperity of Egypt, and it may not be without interest to describe in detail the system of irrigation as practised in the country.

Below we publish the first part of an article devoted to the subject, which will be continued in subsequent issues:—

IRRIGATION IN EGYPT.

The term Irrigation covers the conservation, distribution, and application of water for the growing of crops. Egypt is entirely dependent on the Nile; without that great river it would be merely a part of the surrounding desert. Thirteen millions of people live on five and half million acres of irrigated land. This concentration is the more remarkable in that there are practically no industries, and all imports are paid for in agricultural produce.

The ultimate sources of the Nile are in the Southern Hemisphere, nearer to Cape Town than to Cairo, and it is already a mighty river at the point where it issues from Lake Victoria, 5,500 kilometres, or about 3,500 miles, from its mouth. If all the water which comes out of the great Equatorial Lakes arrived in Egypt, irrigation problems would be greatly simplified; but in its long journey, first through tropical swamps, then through the thirsty desert of the Sudan, the Nile loses a large proportion of its flow. When the monsoon rains fall on the mountains of Abyssinia the tributary rivers, Sobat, Blue Nile and Atbara, discharge into the main Nile during August and September a volume of water many times greater than that of the parent stream. These Abyssinian rivers, great in flood, dwindle to very small dimensions in the dry season, and they contribute little to the summer supply of Egypt. Their water is heavily charged with earth washed down from the mountain-sides, and any reservoir used to store it would soon be filled up with a deposit of mud, and so rendered useless. All the annual flood, therefore, which cannot be directly applied to the land has to be allowed to escape into the Mediterranean Sea. This is a wasteful process but quite unavoidable. Conservation schemes are thus limited to the storage of clear water, and to the reduction of loss from the river by the improvement of its channel through the swamp region. The only great work of this nature so far completed is the Aswan Dam, which stores about 2,500 million tons of water in winter after the flood has passed, and releases it for use when required. During summer about one-third of the water used in Egypt comes out of the Aswan Reservoir.

Egypt is naturally divided into two distinct sections, viz., the narrow Nile Valley from the southern limits of Egypt to near Cairo, and the fan-shaped and widespread lands of the Delta. Two systems of irrigation are at the present time practised in Egypt, the old simple system of basin irrigation and the modern system of perennial irrigation. Both systems are practised side by side in Upper Egypt, while Lower Egypt makes use only of perennial irrigation.

IRRIGATION IN UPPER EGYPT.

Basin Irrigation.

In prehistoric times the great River Nile used to sweep the entire width of its valley from the desert edge on the east to the opposite edge on the west. It was King Menes, founder of the 1st Dynasty, who took the first

step to control the waters of the river. He constructed a great bank or dyke parallel to a part of the western shores of the channel and tied it up with cross banks to the Libyan desert side, thus dividing the cultivable land into a series of compartments or basins. When the flood arrived, these banks were cut at their higher ends to allow of the entrance of the turbid silt-laden waters into these basins. The water was allowed to remain in them for a period of 40 days, until the soil gets thoroughly saturated and the rich Nile alluvium deposited. The lower reaches of the bank were then cut and the water escaped back into the river. As the waters receded, seed was sown, and the cultivator had merely to wait for his harvest. King Menes' plans have since been extended to the eastern side of the river, the big basins being divided and again subdivided to facilitate their filling.

At the present time the basins are grouped into systems, each system having its own feeder canal and one or more escapes into the Nile. Some basins are still further divided by one or more banks parallel to the direction of the river, to separate the high lands near the Nile from the lower lands close to the desert. The dividing banks are pierced with masonry regulators to govern the amount of water necessary for each basin. The heads of the feeders and the escapes into the Nile, or in between two systems of basins, are provided with masonry regulating works to facilitate the control of the water into and out of the basins. The depth of water in the basins varies between .50 m. and 1.50 m., the mean depth being about 1.00 m. If the flood has been a low one and the basins have not been quite filled directly from the river, then, wherever possible, the waters of the higher system of basins, instead of being emptied back into the Nile, are emptied into the lower basins to complete their irrigation.

The area of basins in Upper Egypt amounts to 1,195,000 acres, and that of Nile berms and islands inundated by the high floods 92,000 acres, or a total of nearly 1,287,000 acres. In years of very low floods a certain proportion of this area remains dry, especially in the high basins of Aswan and Kena provinces. In such low years the areas deprived of irrigation lose their year's crop, and the State Treasury loses the annual Land Tax. To remedy this state of things, the Esna Barrage was built on the Nile in 1923, with the object of raising the water levels of the Nile so as to ensure the filling of the basins north of it. The Assiut Barrage, built on the Nile in the year 1902, serves a similar purpose, and so will the Nag Hamadi Barrage, now under construction, each remedying the effects of low floods on the basins downstream of their sites.

The crops grown in basins and known as *Nili* or winter crops are wheat, barley, beans, lentils, flax, helba, etc., one crop only being harvested in the year.

Perennial Irrigation.

Basin irrigation has stood in Upper Egypt without a rival since the dawn of civilisation until the year 1873, when Khedive Ismail Pasha introduced perennial irrigation to replace the old basin system. For this purpose he dug the Ibrahimia Canal, the biggest artificial irrigation channel in the world. It has its intake near Assiut, and runs northwards for a distance of 268 kilometres along the top of the elevated land near the Nile; it is the only perennial canal directly fed from the river in Upper Egypt. The bed width of the Ibrahimia Canal is about 60 metres from the head to Deirout at Kilometre 22. Its discharge in flood may reach 70 cubic million metres *per diem*. In flood, the Ibrahimia serves the system of basins lying to the north of Assiut, in Middle Egypt. Originally the summer or perennially irrigated area for which the canal was dug amounted to 559,000 acres. The perennial irrigated area commanded by it was protected by a longitudinal bank, known as the "Moheet," to the west of which lie all the basins.

Originally the canal had no head work to regulate its discharge, and its water levels were dependent on the natural levels of the Nile. In the year 1901, when the construction of the Assiut Barrage was in progress, a head regulator with a navigation lock was built.

The following year the Aswan Dam, the Assiut Barrage and the Ibrahimia head regulator were all complete, and it was possible then to raise the water levels in summer and to supplement Ibrahimia with a part of the water stored in the Aswan Reservoir.

In the meantime the problem of the conversion of basins in Upper Egypt to be commanded by the Ibrahimia Canal had been taken in hand. Remodelling works on the Yusufy and Fayoum were carried out from 1899 to 1901, and in the latter year a beginning was made in converting basins into perennial irrigation in Assiut province. The work was extended northwards to Minia, Beni-Suef and Giza provinces, the whole of the conversion being completed in all these provinces by 1910.

Besides the area of perennially irrigated land on the east of the Nile commanded by the Ibrahimia Canal, the basins to the east of the river in Giza Province were converted into perennial irrigation, and two pumping stations were installed for this purpose at Leisi and Qurimat in the year 1908, the area served by both being 46,000 acres. In addition to these stations there are some privately-owned pumps on the Nile for perennial irrigation, the largest of which is the Kom Ombo Estate pump, serving an area of 35,000 acres.

Perennially irrigated land in Upper Egypt grows cotton, sugar cane, and dura as the principal crops. The total cultivable area in Upper Egypt provinces as regards irrigation can be classified now as follows:—

Perennial area	...	...	...	...	1,005,000 acres.
Basins	...	...	...	...	1,195,000 acres.
Berms and islands	...	...	...	...	92,000 acres.
Reclaimable lands	...	...	...	...	300,000 acres.
Total	...	...	...	...	2,592,000 acres.

FAYOUM PROVINCE.

General Description.

The Fayoum is a large depression in the Libyan desert, about 12,000 square kilometres in extent, consisting of cultivated land, lake and desert. The cultivated land occupies the lowest part of the depression, and is formed of alluvium similar to that in the Nile Valley. The ancient Egyptians are said to have used the Fayoum as a regulator of the Nile Valley, by diverting the waters of the river into it in time of flood, and allowing the quantity not lost by evaporation to run back into the valley, when the river was low.

The Fayoum of to-day is unique in Egypt. It is a fertile province, situated in the desert and entirely separated from the Nile Valley, except for a very narrow connecting strip of low land. It owes its existence, nevertheless, to the Nile, and while all the irrigation water used in the province flows into it, none flows out.

The Bahr Yousef, which receives its supply from the Ibrahimia Canal at Deirout, runs for a distance of 316 kilometres and finally leaves the Nile Valley and enters the Fayoum Province at Lahoun. After a further distance of 22 kilometres it flows through the town of Medinet El Fayoum, the ancient Arrince.

Irrigation System.

The land level at Lahoun is about 26.60 metres above sea level, at Medinet El Fayoum, 20 kilometres from Lahoun, 22.50, and at Lake Qaroun, which is 21 kilometres from Fayoum, it is 44.50 below the mean sea-level. The average land slope in the Fayoum is about 3.00 metres per kilometre, varying from a minimum of 10 centimetres per kilometre to a maximum of 10.00 metres per kilometre, whereas the mean land slope in the Nile Valley is about 10 centimetres per kilometre.

Certain areas of Fayoum were in the past under the

basin system of irrigation, but these were gradually converted to the perennial system, the last basin (Hod El Tuyur) being converted in 1886.

Owing to the excessive slope of the land, the old canals were run at steep gradients, causing erosion in the bed and sides; to check this action and to raise water for irrigation, weirs, made of wood, brush and mud, were put across the channels.

Progress went on gradually, until the end of the 19th century, masonry weirs of different types replaced the old stick wires at the sites of the falls, and direct irrigation was effected through openings, or pipes, taking off from the canals, on the upstream side of these weirs.

As the Fayoum Province is surrounded on all sides by high ridges of desert, and has no connexion with the Nile Valley except at Lahoun, where the land levels allow water to flow into the province and do not permit any to flow out, drainage water from the cultivated land has naturally to find its way to the lowest land, now occupied by Lake Qaroun.

Of the drains flowing into the lake there are two main ones, Wadi El Nazla and Butts Tamia Drains, which together serve 195 feddans. They are ravines cut down in many places to the Eocene limestones below the alluvium.

As Lake Qaroun is the only place into which all the drainage water of the province goes, the drainage problem is a constant pre-occupation for Irrigation officers in charge of water distribution in the province. The lake level rises and falls seasonally, the variation being due to the amount of water entering the lake and the evaporation. As a rule, the lake falls in summer and rises in flood time, when most of the land is under cultivation and the drainage is excessive. Yet drainage can be minimised by restricting the irrigation supply to actual requirements.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

The surface area of the lake varies with its water levels, and at the present average level of 45 metres it is 51,200 acres. The quantity of water entering the lake has been estimated for the last six years at an average of 565,000,000 cubic metres per year, the approximate evaporation factor is 7 millimetres per day.

In addition to the invaluable function of Lake Qaroun to the Fayoum Province from the drainage point of view, it is also a means of living for some 2,500 men engaged in the fishing industry.

Utilisation of Water Falls.

As a result of the excessive slope of the land in the Fayoum numerous water falls are formed along many of the canals and drains, offering free power for the turning of corn mills and water wheels by wooden turbines.

The mills are worked either by turbines of a pattern introduced from India about the year 1870, or by undershot wheels. The former work in falls of not less than 1.50 metres, while the latter work under smaller falls of not less than 0.60 metres. There are about 226 water corn mills in the Fayoum Province and 70 undershot water-wheels for raising water to irrigate high lands. The latter serve an area of about 2,000 acres and pay no Government taxes. Some of these wheels working under falls lift water up to a maximum height of 6 metres. The capacity of the wheel depends on the discharge of the canal and the fall.

The existence of high falls in the large canals and drains has encouraged big land owners and municipalities in the neighbourhood to make use of the power produced by them. In 1904, a turbine was erected on the Butts Tamia Drain, where there exists a fall of about 6.5 metres, with a mean discharge of 5.00 cubic metres per second. This turbine generates 360 h.p. utilized in working: (a) Two centrifugal pumps, one ten inch and the other sixteen inch, for irrigating high lands in the vicinity; (b) A ginning factory producing about 200 bales of cotton a day; (c) A corn mill; (d) For lighting purposes.

The municipality of Fayoum Town have utilised the power of the water fall on one of the neighbouring canals in generating electricity for the lighting of the town and its water supply.

A station was constructed in 1926, with two turbines and a space for a third to be erected in the future to cope with the expected increase of demand. These turbines work under a fall of 4.60 metres to 5.70 metres, with a discharge varying from 5 to 20 cubic metres per second and work generators producing 540 kilo-watts.

The Fayoum soil is suitable for the cultivation of any of the crops grown in Egypt. The present area under cultivation is about 350,000 feddans. There is also a possibility of an extension of cultivation on a further area of 50,000 feddans, when the Nile major projects are executed and a sufficient summer water supply is available.

(To be continued.)

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Asphalt.—The Director-General, Tanzim. Department, Cairo, invites tenders for the supply of 6,800 tons of asphalt required for the year 1929-1930. January 22.

Steam Lorries.—The A/Director-General, Tanzim Department, Cairo, invites tenders for the supply of three steam lorries required for the Department. December 15.

Police Uniforms, Etc.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of police uniforms, etc. December 15.

Steam Lorries.—The Ministry of Public Works, Cairo, invites tenders for the supply of three steam lorries. December 15. (D.O.T.)

Steel Book Cases.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of 115 steel book cases for the Royal Library in Cairo. December 31. (D.O.T.)

INDIA.

Steam Pumping Plant.—The Indian Stores Department, New Delhi, invites tenders for the supply, delivery, and erection of steam engines and pumps. December 6. (D.O.T.)

TURKEY.

Field Telephone Wire.—The Direction-General of Posts, Telegraphs, and Telephones, Angora, invites tenders for the supply and delivery of 50,000 metres of rubber-covered field telephone wire. December 18. (D.O.T.)

Crushing Machines.—A Turkish firm is desirous of purchasing machines for crushing and drying valonea acorns. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, December 11).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 12).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, December 1); s.s. Morvada for Colombo, Madras, and Calcutta (London, December 15).

Cunard Line.—S.s. Bantria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow and Swansea December 7, Liverpool December 8); s.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 22, Swansea December 27).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 15).

P. and O. Line.—S.s. Rajputana for Bombay (London, December 7); s.s. Behar for Calcutta (London, December 8).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 13).

Ellerman and Papayanni Lines.—S.s. Algerian for Algiers*, Smyrna, and Constantinople (Liverpool December 1, Swansea December 1); s.s. Castilian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 1); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 8); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool December 8, Swansea December 13); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); s.s. Oporto for Patras, Piræus, Volo*, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 28); s.s. Kyno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA	Dec. 11	*ASSYRIA	Jan. 11
*BRITANNIA	Dec. 31	*EGLYSIA	Jan. 29

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

The directors of the Prudential Assurance Company have elected Mr. Edgar Horne to the Chairmanship of the company, vacant through the death of Mr. A. C. Thompson. Mr. Horne, who is the son of a former Chairman of the Prudential Assurance Company, is a director of the International Sleeping Car Share Trust and is on the Advisory Board of the British Overseas Bank.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 27.

The fortnightly settlement which had to be arranged during the past week disclosed some difficulties for those who had shown undue speculative confidence, but the arrangements passed off satisfactorily and after the account was disposed of the Stock Markets took on a brighter tone. An outstanding feature of the week has again been the steadiness of gilt-edged stocks, and this can be explained partly by the absence of large-scale sellers from the market and partly by the expectation of an early conversion announcement by the Treasury. The Bulgarian Stabilisation Loan was an outstanding success, the lists being closed early in the morning of the day of issue. Home rails were dull on disappointing traffic returns. An American buying movement was responsible for strength in Marconis and in some of the leading gramophone issues, but the smaller fry amongst the latter have been inclined to droop. The oil market, after a quiet opening, was more active, though profit taking was frequently in evidence. While it is not possible to gauge from the movements of the past week whether the downward trend in Stock Market activity is likely to continue there are those who point to the amazing confidence which New York continues to show as an indication that the present slight setback may be regarded as only temporary. But it should be borne in mind that the closing weeks of the year are not the best time in which a movement which has been somewhat abruptly checked can be restarted.

London Catering Fusion.

A short while ago negotiations were proceeding between Slaters Ltd., the London caterers, and another catering concern believed to be the A.B.C., but it was found impossible to reach an agreement. Interest has now been aroused by the announcement that Slaters have absorbed the Bodega Company which is in the same line of business. Substantially the undertaking will be acquired in exchange for shares in Slaters, whose capital will be increased by the issue of 500,000 Ordinary shares and 100,000 6½ per cent. Preference shares for the purpose.

Slaters has had a somewhat chequered career since it was registered in 1894 to take over the business of an

older company registered only five years earlier. In the years preceding the War dividends were declining and for the four years preceding 1918-20 no dividend was paid on either preference or ordinary shares. Since that year there has been a steady increase in prosperity. The profits for the year ending September 30 last were £52,040 as against £48,121 for the preceding year. Although the Ordinary dividend which had been 9 per cent. for the last three years, has been raised to 10 per cent., only £28,000 of the profits has been distributed, the remainder being carried to various reserves. The directors report that additional plant is being laid down, both in the bakery and in the ice-cream factory. With regard to the acquiring of the Bodega business they remark that "the businesses are well adapted for joint management." With these additional possibilities for development it is reasonable to suppose that the recent progress of Slaters Limited will be maintained. The Ordinary shares yield £7 2s. per cent.

Tax Free Investments.

Investors, like other people, are sometimes perplexed by the difficulties of income tax returns, and are led to wonder if they would not benefit by investing in "tax free" investments. Actually, of course, since taxes are levied by the Government, it is only the Government which could relieve any investment of the obligation to pay income tax. There is, in fact, only one security quoted on the London Stock Exchange of which the income bears no tax, and that is the 4 per cent. War Loan. On the 5 per cent. War Loan, however, the Bank of England does not deduct income tax when paying the interest, as is the general rule, but the holder must declare the interest received in his income tax return, and therefore pays the tax in the end. It is an advantage of investment in building societies that their interest is not subject to tax.

Many registered companies declare dividends at certain rates "free of tax." The income tax is not avoided in these cases, however; it is paid by the company in the first place, and since the shareholders constitute the company, the burden of payment therefore falls on them just the same. In comparing such dividends with those of other companies, allowance is made for income tax at the standard rate of 4s. in the £—i.e., a dividend of 5 per cent. free of tax is equivalent to one of 6¼ per cent. tax payable. Tax free payments were more popular at the time when income tax was rising rapidly. Now that the rate of tax is less likely to change, less attention is paid to the question of whether the investment is free of tax or not. The non-deduction of tax at the source in the case of the 5 per cent. War Loan makes it attractive to some investors, because where the tax is deducted it is deducted at the rate of 4s. in the £, and those who pay 2s. have the bother of making a claim for the difference.

Reconstruction Loans.

The closing of the lists of the Bulgarian Stabilisation Loan, indicating that the issue was fully subscribed, within a few minutes of their being opened, demonstrates the popularity of this class of security with the discriminating investor. In its efforts in the direction of restoring stable conditions in Europe, the League of Nations has allowed several loans to be issued under its auspices by the newer States, and others which were particularly in need of foreign financial assistance after the War. While the League is in no sense a guarantor of these issues, it allows its name to be used only if the borrowing country grants officers of the League a certain amount of supervision over its finances, with a view to ensuring the prompt meeting of obligations under the Loan. In fact, the security for these loans is excellent, specific sources of revenue being often allocated to the debt service, and the securities now stand at prices much above those at which they were issued. As regards Recon-

ROAD CONSTRUCTION IN ABYSSINIA.

Abyssinia appears to have every link in the chain leading to prosperous economic development excepting communications (says the United States Minister Resident and Consul General at Addis Ababa, Mr. Addison E. Southard, in a recent report). The one railway in the entire country runs from the port of Jibuti, French Somaliland, inland for 500 miles to Addis Ababa. No highways have yet been completed.

Addis Ababa, a city of 150,000 population, has during the past six years developed a fair number of streets and suburban dirt roads suitable for motor vehicles, but the streets merely extend beyond the city limits, and perhaps three-quarters of the total street mileage is gullied and boulder-strewn. Harrar has very little street mileage suitable for motor vehicles.

The inherent conservatism of the Ethiopians partly explains the lack of highways in the country. The only place where motor vehicles can be used to any extent is Addis Ababa, with its comparatively few miles of macadamized streets. For centuries pack animals have carried merchandise and people to and from the Provinces. To the Ethiopian who has always lived within the country there seems no particular reason for spending money or labour on highway construction, but now that his fancy has been firmly grasped by the motor car he is feeling considerably the urge to extend the area over which he may ride on rubber-tyred wheels. As a result, there is rapidly growing interest in and pressure for the construction of highways.

Financing is the most important obstacle to the development of a highway system. The country is rich in products but not in actual money. There is also plenty of labour, but the use of bare hands alone in building the hundreds of miles of highways contemplated is rather a discouraging prospect. Machinery must be purchased and engineers brought in from outside. This requires ready cash. The Government's financial system does not appear equal in its present organization to the problem involved. It collects taxes, but to an important extent in kind, because of the lack of ready money. Ethiopia in many parts still carries on its trade by barter. The Government has no public debts and has never borrowed money; bond issues are alien procedures which the Government will not quickly or readily approach as a means of raising cash; and it appears obvious that foreign capital and perhaps enterprise must be depended upon for at least the initial highway construction which is imminent in Ethiopia.

As a result of combined Ethiopian and foreign interests, there already exists a tentative highway construction programme. The first highway, upon which it is understood construction will shortly begin, runs from the railway town of Dire Daoua to Harrar, which is the centre of a rich agricultural and stock-raising area. The road will be about 30 miles in length and will support a heavy traffic when completed.

Two roads are planned to extend each about 200 miles from Addis Ababa into the areas of Sidamo and Jimma, to the south and south-west, respectively, of Addis Ababa. From these two areas comes much of the produce exported from Addis Ababa to the outside world. It now requires weeks to come in by pack animal at excessive costs. The routes offer no important engineering difficulties.

Another route, more difficult because of the terrain, is the one running west from Addis Ababa to Gore and Gambela on the Sobat River. This is also a rich area, although a great deal of produce goes out by river during the high water in summer to Khartoum via the Sobat and

White Nile, and there is also much travel and traffic by the present caravan trail to and from Addis Ababa.

A fourth road considered is one from Addis Ababa to Lake Tsana, a distance of approximately 200 miles. This, however, is likely to depend upon the result of present negotiations for construction of the Lake Tsana Dam.

These four routes, not including the Dire Daoua to Harrar road, which seems assured, are tentative and depend for immediate construction upon foreign capital. The Ethiopian Government is understood to be disposed to consider granting concessions if and when applied for.

New highways will give outlets to the insistent pressure of the people and country for expansion of their agricultural production. They will, on the other hand, facilitate the distribution of imported manufactured goods to a people whose demand and purchasing power will have thus automatically been many times increased. In this latter respect automotive vehicles and equipment will feel the first effect.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board's correspondents at Jaffa report that as the result of considerable investigations they are led to the opinion that shipments to the United Kingdom will not be very much larger than last year. Everything, it is stated, will depend on the quantity of green fruit which is shipped immediately and on the weather in the latter months of the season. A provisional estimate for the present season gave two million boxes as the probable quantity available for shipment to the United Kingdom, as against 1½ million boxes last season.

NEWS FROM ALL SOURCES.

The production of the Anglo-Egyptian Oilfields for the week ended November 9, amounted to 5,074 tons.

A commercial, shipping and consular treaty was concluded between Czechoslovakia and Yugoslavia on November 14.

Sir Thomas Strangman has joined the Board of Java Investment Loan and Agency and has been elected Chairman. Sir Thomas was Advocate-General and Member of the Legislative Council, Bombay, 1916-1922.

An international conference dealing with direct goods traffic on the Central European railways opened at Cracow on November 26. The delegates included representatives of Yugoslavia and Roumania.

It is reported that the Swedish Match Trust has made an offer of a loan to the Roumanian Government on similar lines to that concluded with Yugoslavia.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended October 31 amounted to £E15,831, making the total from April 1 £E173,074.

Scrip certificates of the Greek Six per Cent. Stabilisation and Refugee Loan of 1928 should now be surrendered for exchange for Definitive Bonds with interest coupons attached.

The number of motor cycles registered in certain districts in India at June 30 last was as follows:—Madras City, 2,207; Nilgiris, 349; Trichinopoly, 63; Madura, 78; Coimbatore, 149. Registrations in districts of the Madras Presidency, other than those mentioned, totalled 608.

Bulgaria's tobacco harvest is estimated to amount to about 20,000,000 kilos. Excluding the quantity required for local consumption, about 6,000 kilos, and after making allowance for bad fermentation, waste, etc., there will remain approximately 12,000,000 to 13,000,000 kilos for export. The area under tobacco has been reduced in old Bulgaria this year, while that in the new territories (Macedonia) has increased.

Roumania's exports of petroleum products in September, amounted to 207,443 tons as against 199,033 tons in August. The principal countries of destination were:—Italy, 43,169 tons; England, 32,532 tons; Egypt, 20,056 tons; Austria, 16,367 tons; Germany, 14,756 tons.

Motors and Motoring.

By G. B. B.

Night Driving.

The last few weeks has seen a revival of the old controversy regarding the rear lighting of cycles, and a number of letters have appeared in the Press on the subject which cannot have done a great deal of good to the cause championed by the respective writers. For instance, we have had a letter from a cyclist who defended the action of certain of his friends in not carrying a rear reflector and so breaking the law, on the amazing ground that the motorist, also, was breaking the law in travelling at any speed in excess of 20 m.p.h. Granted that is so, the fact that one man breaks one law is no justification for another man breaking any other enactment. Then we had a letter from a motorist complaining that during a certain night drive he had overtaken 24 cyclists without rear reflectors. Well, if he could see them well enough to count them as he passed, when they had no reflectors, obviously reflectors were not necessary to enable him to see them! The truth of the whole matter is simply this: motorists driving at night with due regard to other road users, actual or possible, have no difficulty in seeing pedestrians, cyclists, dogs, or other animals. Rear lights or reflectors are quite unnecessary. Everything, in this matter, depends on the driver, and the driver who cannot see a cyclist unless he carried a reflector, equally could not see a pedestrian in the dark, and consequently the sooner he gives up night driving the better.

On this subject, it may be said that motorists should pay attention to Clause 5 of the Bill introduced into the House of Commons by Viscount Cecil. This requires that, until the Minister of Transport makes regulations, drivers shall comply with the regulations set out in the schedule of the Bill for securing the safety and convenience of persons who use the highways and of persons driving vehicles. The underlying idea of the schedule is that speed should be regulated according to circumstances and the condition of the roadway, such as the gradient, width and surface, height of hedges, number and character of cross roads, time of night, and whether moonlight or moonless, vision and visibility, presence or possible presence of pedestrians, cyclists, cattle, other vehicles or general traffic and so on that might reasonably be expected. Other points are that a driver must obey all directions given by a highway authority and must pass on the right of every other vehicle proceeding in the same direction, with the exception of trams. No vehicle shall pass or attempt to pass any tramcar which any person is entering or leaving, and overtaking or passing another vehicle proceeding in the same direction, on a curve or bend in the highway, shall also be forbidden. It is also proposed that the driver of any horse-drawn vehicle or of any mechanically-propelled vehicle exceeding five tons weight, unladen, shall at all times keep the vehicles as close to the near side of the road as is possible.

Motor Omnibuses.

It is interesting to note that the London and North-Eastern Railway are, like the Great Western, augmenting considerably their road transport services. The latter railway have long been active in that direction and the L.N.E.R., who operate on a large number of routes in North Durham and South Northumberland, have just purchased a further dozen omnibuses, which are a great improvement on those at present in use. The new coaches are made by Thorneycrofts and are 32-seaters on pneumatic tyres, with semi-bucket type seats. This company has purchased the business, including the roll-

ing-stock and goodwill, of Messrs. Emmerson Bros., of Hexham, who have been running for some time past a passenger service between Newcastle and Carlisle. At one time it was thought that the Newcastle Corporation would purchase this business as a going concern, but the Ministry of Transport had other ideas. The sleeper road-coach is also likely to be developed considerably in the near future and already we hear of proposals for double-deck coaches to sleep 12 persons in the lower deck, with seating accommodation for 20 more in the upper saloon. To ensure due steadiness of running, I believe these would have to be on six-wheel chassis, otherwise there would be a good deal of rolling at curves and swaying at high speeds. The chief trouble seems to be the height of these vehicles. Sleeper coaches imply night driving, and high vehicles are prone at night time to meet with low bridges and overhanging branches of trees. Drivers, unless running on well-known routes, would need cast-iron nerves to handle vehicles of that size.

Self Starters.

Now that the colder weather is with us, many motorists are experiencing trouble with starting where self-starters are fitted. But the trouble is seldom or never with the starter itself, but is generally due to the quality of the oil used. If it is too thick for winter use, or if it is of the cheap and nasty kind, the engine gets gummed-up whilst standing, and in that case, short of freeing the pistons by an injection of petrol, hand starting must be resorted to. Another possible cause of trouble is that the batteries may be in bad condition or run down, so that they do not supply enough energy to the starting motor.

The Imperial Bank of Persia has declared an interim dividend for the half-year ended September 20, 1928, at 4s. per share, free of income tax, payable on and after December 17. The transfer books will be closed from December 3 to December 15, both days inclusive.

The directors of the Prudential Assurance Company have appointed Sir George Lewis Barstow a director to fill the vacancy caused by the death of Mr. A. C. Thompson. Sir George Barstow is Government Director of the Anglo-Persian Oil Company.

A Belgrade message states that according to official statistics the figures for exports from Yugoslavia for the first ten months of the current year were five per cent. higher than those of the corresponding period of last year. These exports weighed 3,780,000 tons and had a value of five milliard, two hundred and thirty four million dinars.

British Consular Reports

IX.—BULGARIA.

In view of the issue last week of the Stabilisation Loan special interest naturally attaches to the report on economic conditions in Bulgaria dated July last by Mr. Christopher Bramwell, Secretary in Charge of Commercial Affairs at H.M. Legation, Sofia, which has just been issued. We give the following extracts:—

The year 1927 was marked by a certain improvement in the economic situation of Bulgaria, due to a stricter control over public expenditure, which enabled a surplus on the Budget to be realised, and to a satisfactory harvest of all crops except maize and rice, with the result that exports showed a substantial surplus over imports. To a certain extent home production of manufactured goods, principally cotton and woollen textiles, has been influential in producing a surplus trade balance, and it is observed that the import of manufactured goods is decreasing *pro rata* with the development of home industry, which receives great impetus from the liberal provisions of the Law for the Encouragement of Local Industry. The improvement was reflected in a general increase in bank deposits, an easing of the money market in the form of somewhat cheaper credits and a decrease in the number of protested bills; also in the appearance of several new items on the list of exports, such as sugar, wine and certain forms of fresh fruit.

That the Bulgarian economy, in order to reach an even satisfactory state does not still require to make enormous progress, would nevertheless be an unduly optimistic conclusion. Though the country's chief revenue is from agriculture, little progress has been made in educating the peasants in the use of improved and up-to-date methods of cultivation. Bulgaria's mineral resources are admitted to be a great source of potential wealth, yet the entry of foreign capital destined for, and, as it would appear, alone able to achieve their exploitation, continues to be, to a certain extent, hampered.

Imports and Exports.

Balance of Trade.—According to the computation of the Bulgarian National Bank, on December 13, 1927, this country possessed a favourable trade balance of 511 million leva, as compared with a favourable balance of 19 million leva at the end of 1926. The corresponding figures published by the Statistical Bureau, based in all probability on Customs House returns, are as follows:—

	Exports. (Million leva).	Imports. (Million leva).	Balance. (Million leva).
1926 ...	5,618 ...	6,247 ...	—629
1927 ...	6,628 ...	6,133 ...	+495

The following is a table showing the shrinkage or expansion in the shares of foreign countries in Bulgaria's import trade during 1927:—

(In million leva.)					
Lost.			Gained.		
Austria ...	39	Great Britain ...	28		
Belgium ...	28	Holland ...	22		
Czechoslovakia ...	147	Italy ...	29		
France ...	34	Sweden ...	29		
Germany ...	75	Switzerland ...	31		
Hungary ...	3	U.S.A. ...	11		

Great Britain participated in Bulgarian imports during 1927 to the extent of 737 million leva, a figure which repre-

sents some 12 per cent. of the total imports from all sources. This represents a slight improvement in comparison with the percentage of 1926, but a falling off from that of the whole period 1921-26 inclusive, when Great Britain's average percentage of imports was 14, and over the period 1910-13 inclusive, when it was 13. It should, furthermore, not be lost to view that whereas the volume of British exports to Bulgaria has remained roughly constant, this country's annual requirements have increased during the post-War period by almost a million pounds.

Though the tobacco exports for 1927 were lower than those for 1926, their declared value increased by some 200 million leva. The value of cereal exports for 1927 increased also by some 500 million leva. The falling off in the value of flour exports owing to the loss of the Greek market amounted to over 300 million leva for 1927, as compared with 1926. Several new items appeared on the list of exports for 1927. These are sugar (3,667 tons), wine (6,087 tons), fresh grapes, apples, prunes, and nuts (3,273 tons).

State of Internal Trade.

The number of bills presented during 1927 totalled 199,000, or a value of 1,585 million leva, compared with 205,000 bills, or a value of 1,820 million leva, in 1926.

In this connexion it is well to repeat what has been said in former years regarding the need of care in the selection of local agents and caution in the matter of credits. Too many United Kingdom firms have allowed credits to accumulate beyond the safety point, with consequent embarrassment or bad debts or partial and long postponed settlements. British manufacturers need not be deterred from forming or extending business connexions, subject to the usual safeguards, with the many Bulgarian firms of sound repute.

On April 14 and 18, 1928, two severe earthquake shocks caused considerable damage in the part of southern Bulgaria between South Zagora and Philippopolis, the latter town being the scene of important destruction to house property.

For the purposes of this report it will suffice to state that apart from a natural contraction in business due to temporary disorganisation of trade, uncertainty as to losses incurred and future spending power, the economic situation from the point of view of large wholesale and retail merchants and banks has not been materially affected. It is still difficult to estimate the losses sustained with any degree of accuracy. Some place them as high as £10,000,000, other as low as £3,500,000. They include principally damage to house property in Philippopolis and to tobacco stocks and warehouses, the latter being estimated at 80 million leva.

Against these losses must be set the prospects of an exceptionally good harvest, as a result of which the shrinkage of trade due to the earthquakes is not expected to reach 25 per cent.

Agriculture.

The Kingdom of Bulgaria has an area of 10,314,620 hectares. Of this area 3,184,942 hectares (excluding fallow land) were under cultivation during 1927, as compared with 2,924,752 hectares for the years 1917 to 1926 inclusive.

The 1927 harvest was satisfactory for all cereal crops excepting rice and maize. The rice crop amounted to 6,000 tons, as against 7,000 tons in 1926. The maize crop amounted to 523,600 tons, as against 737,000 tons in 1926. The 1927 harvest of all cereals amounted to 2,568,000 tons, as against 2,542,000 tons in 1926. Other crops fared well during 1927. The tobacco crop, owing to drought and a decrease in area under cultivation, was small but of exceptionally fine quality. This fact, combined with the smallness of the Greek and Turkish tobacco crops, enabled good prices to be

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool

obtained. Stocks of old-crop tobacco have been entirely liquidated.

Fisheries.

Fishing has not yet been adopted as a profession by Bulgarians. The Greek fishing population has entirely disappeared from the Bulgarian coast, and its place has been taken by refugees, chiefly Macedonians, who cannot be induced to take to the sea.

The State fishing school at Varna has now been supplied with a fishing trawler, *The Peroun*, built to Bulgarian specifications by a Viennese shipbuilding firm for the sum of 5 million leva. Tenders for the construction of this trawler were received from British firms, but the latter's prices were too high to be acceptable. It is hoped to make the ship pay its own way, or at least to cover the expense of instruction in deep sea fishing.

Mining.

Deposits of coal are met with in Bulgaria in all their formations from the Silurian onwards. To judge from coalfields which have undergone hitherto only a superficial survey, the country's coal reserves are enormous. The quantities of coal raised from Bulgarian mines during the past three years are shown in the following table:—

(In tons).			
Year.		State mines.	Privately owned mines.
1925		1,095,174	124,396
1926		1,050,998	154,758
1927		1,152,651	158,579
			(10 months only)

Bulgaria finds no outlet for her coal in foreign markets, and what coal is raised is for home consumption. The coal mining industry is seriously handicapped by lack of capital, but it must be added that there exists no serious export marketing organisation which would facilitate successful competition in foreign markets.

The following quantities of ores of various kinds were extracted during 1927 (in tons):—Copper, 10,934; copper-lead, 16,789; Lead, 1,230; lead-zinc, 6,720; zinc, 1,459; silver-lead, 70; manganese, 7; kaolin, 2,841.

Boring operations at Provadia, undertaken by the Bulgarian Department of Mines, have resulted in the discovery of vast rock-salt deposits, which should have the effect of making Bulgaria independent of foreign supplies. Since 1923, and up to 1926, the production of salt (extracted chiefly from the salt lakes in the Bourgas district) has fluctuated between 25,000 and 38,000 tons per annum. This fell short of home requirements by from 30,000 to 36,000 tons, which were imported. The production of salt in Bulgaria during the first ten months of 1927 attained to 53,000 tons.

During 1927 an unusually keen interest was evinced by mining engineers and geologists (chiefly of German nationality) in Bulgarian mineral deposits. There are prospects of a considerable development in the scale of the latter's exploitation. Liquid petroleum was discovered in the course of 1927 in a well in the Tondja valley, and the Department of Mines is effecting trial boring operations in that region.

A syndicate who hold a concession at Bresnik for the distillation and refinement of shale oil, are still working there with a 4-ton experimental plant. The definite launching of a scheme, involving the finding of £500,000 capital and the erection of permanent plant, awaits the completion of much preliminary arrangement. The Bulgarian Government have agreed to place before the National Sobranje a Bill prolonging by two years the term of the Concession's realisation on condition that such realisation shall be expressed in the construction of not less than 30 retorts capable of distilling up to 100 tons of shale daily, and possibly of 64 retorts of 200 tons throughout, and that for the realisation of this enterprise a company will be formed, having an initial fully

paid up capital of from £250,000 to £500,000. Any eventual participation of the Bulgarian Government in the company would probably take the form of free deliveries to the latter of coal for a period of from 10 to 15 years.

Industry.

Every encouragement is being given by the Bulgarian Government to the development of local industry. It cannot, however, be said that the latter fared uniformly well during 1927.

Owing to the imposition by the Greek Government of a standard on imported flour with which they have been unable to comply, the Bulgarian flour mills have been deprived of the chief market for their produce, and are now said to be suffering from the results of over-production.

The Varna Textile Factory "*Textile*" has increased the number of its looms to 650, and has installed as many as 100,000 spindles, the latter so that it may no longer be entirely dependent upon imported thread. British trade will not be prejudiced since the factory has hitherto purchased all its yarns in Italy. The annual production of this factory now stands at 9 million metres of cabots and oxfords. This factory and the factories at Gabrovo now produce sufficient cabots to supply the local demand, and imports of cabots from the United Kingdom, the United States and Japan have ceased in consequence. A corresponding decrease is reported in the imports of oxfords from the United Kingdom in consequence of the development in this branch of Bulgarian industry.

The "*Czar Boris*" cotton spinning mill at Varna (the only one in Bulgaria) has also increased its output. It now manufactures daily 1,000 ten pound packets of cotton yarn of counts up to 14, but its machinery is not of a type which can deal adequately with the manufacture of the finer qualities. Competition with British yarns is already severe in the lower counts, and is likely to be met in the higher counts as well, as and when the Varna mill improves its installation.

The sunflower seed-crushing industry is suffering from lack of credits. Much to the benefit of the industry in general a large number of the smaller factories have been forced to close down, and profits have resumed a more favourable level in consequence.

Tanneries fared well during 1927.

Roads.

There are probably few countries where the existence of good roads would benefit the national economy as much as in Bulgaria. The condition of Bulgarian roads remains, however, far from good. This is chiefly due to lack of credits, but is stated in great measure to be also due to the use of unscientific primitive methods of upkeep and repair.

In consequence motor transport is in its infancy in this country, which of all others should stand to benefit considerably by its increased use for connecting up remote country districts with the few existing railway lines. The number of motor vehicles in use in Bulgaria at the time of writing may be estimated at 3,000. No precise returns for the whole country are yet available. The greater proportion of the vehicles are passenger cars, either for private use or for use as taxis in the larger towns. The makes of cars represented here are, in order of popularity,

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "*The Near East and India*" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

American (U.S.), Italian, French. There are a few British cars in Bulgaria, but their numbers are negligible. Though the market for passenger vehicles is small there should be a possibility of selling commercial vehicles of the six-wheeled type, and British manufacturers would do well to study this matter in view of their superior experience in this type of construction, the high reputation enjoyed in this country by British materials and workmanship, and the likelihood of a considerably increased road-making activity as a result of increased credits arising out of the proposed reconstruction loan.

DEVELOPMENT OF ELECTRICITY IN BULGARIA.

There has been a gradual advance in electric power developments in Bulgaria in the past several years as shown in a report of the Ministry of Agriculture. The number of wire systems distributing electric power have increased considerably as compared with pre-War years (says an American Consular report). At the end of 1900 there was only one system in operation, and in 1914 the number had been increased to four. The greatest progress was made between 1923 and 1927; 10 systems were in operation at the end of 1923, and 74 at the end of 1927. The ownership of these transmission systems is divided as follows:—Twenty-six are the property of different communes, 27 are owned by co-operative associations and banks, 7 by joint-stock companies, and 14 are privately owned.

There are 30 hydroelectric stations actually in operation in Bulgaria. Of these stations, 11 have a capacity up to 100 h.p., 11 from 100 to 500 h.p., 4 from 500 to 1,000 h.p., 2 from 1,000 to 2,000 h.p., and 2 above 2,000 h.p. The Electric Society of Sofia and Bulgaria owns one of these latter two stations, which has a capacity of 3,720 h.p. The other one is owned by a concern known as "Granitoid" and has a capacity of 7,800 h.p.

The total energy produced by these hydroelectric stations during 1927 was 25,634,994 kilowatt-hours, of which 15,192,040 kilowatt-hours was supplied by "Granitoid" and 9,500,000 kilowatt-hours from the Electric Society of Sofia.

There were 109 steam stations in Bulgaria at the close of 1927, of which the principal are situated in the districts of Plovdiv and Bourgas. Of these stations, 60 have a capacity up to 100 h.p., 29 from 100 to 500 h.p., 5 from 500 to 1,000 h.p., 4 from 1,000 to 2,000 h.p., and 2 above 2,000 h.p. One of these largest stations, with a capacity of 7,200 h.p., is owned by the Electric Society of Sofia, and the other, with a capacity of 3,200 h.p., is the property of the syndicate "Watcha."

The total electric production of the steam stations during the year 1927 is estimated at 11,097,540 kilowatt-hours, of which 5,800,000 kilowatt-hours was produced by the Electric Society of Sofia and Bulgaria.

Company Meeting.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

The seventeenth ordinary general meeting of the Bengal-Nagpur Railway Company, Ltd., was held on November 22 at 132, Gresham House, E.C. Mr. Robert Miller, Chairman of the company, presided.

The Secretary (Mr. R. C. Volkers) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—Last year I had to record a fall in the gross earnings as compared with the previous year, the respective figures for the two years being Rs.832 lakhs for 1926-27 and Rs.842 lakhs for 1925-26. The fall was slight in itself; but as for several years previously I had had the pleasure of recording a progressive increase in gross earnings,

year by year, I felt it necessary, in order to counter any pessimistic feeling that might possibly have been awakened in your minds as to the earning capacity of the railway on the one hand and as to the development of trade on the other, to assure you that though the two vital elements were for the moment not at their best, the circumstances which hindered their progress were of a transitory nature.

It is, therefore, with great satisfaction that I am now able to record the very substantial increase of Rs.84,87,212 in the year 1927-28, making the gross earnings of that year Rs.9,16,23,492, which I need hardly add, constitutes a record. My satisfaction, and yours, too, I expect, is the greater because the analysis of the increase in goods traffic, which is to be found in paragraph 10 of the directors' report, shows that no less than five-eighths of that increase was received from the carriage of general merchandise, exclusive of fuel which falls under the classification of fuel. The working expenses for the year amounted to Rs.5,61,49,584, being in excess of the figure for the previous year by Rs.80,86,847. An analysis of this excess and a statement of the causes out of which it arises will be found in paragraph 11 of the directors' report, to which I invite your attention. I need augment the explanation there given only in the case of the first two items of the analysis, namely, maintenance of structural works and maintenance and supply of locomotive power. Both of these heads are now beginning to record expenditure on the extensive and intensive programme of raising the standard of the line and locomotives to deal effectively and economically with the large expansion of traffic which must occur within the next five years.

The financial results of the years are an increase of Rs.4,10,361 in net earnings, and a decrease of Rs.8,86,645 in surplus profits, due to a sharp rise in the amount of interest payable on capital consequent on the inclusion in open line capital of the construction expenditure on new lines opened during the year. The company's share of the surplus profits amounts to Rs.7,47,583, which gives a return of 1.66 per cent. on the company's ordinary capital stock, as compared with the return of 1.94 per cent. obtained in the previous year. This sum, after payment of Indian income and super tax, enables a dividend of 1½ per cent. to be paid to stockholders in addition to the guaranteed interest of 3½ per cent., and also allows of an addition to be made to the reserve, which will then stand at approximately £120,000 on January 1, 1929, as compared with the figure of £106,800 at which it stood on January 1, 1928.

The year 1927-28, on the results of which I have been speaking, has, with the wonderful stride it made in the race for gross earnings, set a very hot pace for its successor of 1928-29; nevertheless, the indications available up to date justify the conclusion that 1928-29 will certainly maintain the gains made by its predecessor, and may even do a little better. We have been fortunate so far this year, in that we have had no extensive flood damages, with their consequent interruption of communications and loss of traffic; but at the same time we have suffered indirectly from labour unrest, of which in past years railways seem to have been the principal centre, and which is now extending to large industrial areas.

The construction of the railway from Raipur to Vizianagram and its natural complement the Vizagapatam Harbour is progressing. When these important works are completed, which I hope will be in about three or four years, we may expect a heavy increase to arise in the demands on the railway for transportation of general merchandise. That increase will not only embrace exports of produce from the Central Provinces, but also exports from areas beyond the present influence of the railway, which are now carried to port by other railways. It will not materialise in all its fulness immediately the railway and the harbour are completed; but its beginning will then become apparent and the volume of its expansion will depend largely on the ability of the railway to carry the additional traffic and on the capacity of the harbour to ship it. This anticipated increase in the demand on the railway for transportation is one of the many factors calling for the strengthening of the track and the introduction of more powerful locomotives.

When I tell you that the estimated cost of carrying out this important work is the rupee equivalent of approximately four million pounds sterling, the greater part of which will fall upon revenue, you will naturally ask how this additional burden is to be met without serious detriment to the return received at present by the stockholders. Ladies and gentlemen, the reply, put in a nutshell, is that the revenue funds required will have to be made available largely out of what would otherwise have been the surplus profits of the railway. In other words, Government and the company will be contributing the cost in the proportion of their respective open line capitals. The intensive programme on which the work is being carried out covers a period of about three years, during which the company will be in a position to maintain the dividend at the present rate, inclusive of guaranteed interest, of 5 per cent., less English income tax, by drawing upon the reserve fund.

The report and accounts were unanimously adopted.

According to the *Morning Post* Constantinople correspondent, by an agreement with a Turkish Government organisation the Ford Company has secured a depot in Constantinople for the storing and distribution of motor cars and other products of the company in the Near East. The American company will acquire the lease of seven warehouses and two offices adjoining the sea at Tophane, Galata (about a mile north of the Galata bridge over the Golden Horn), with the quay, cranes, and other installations. The lease is for ten years, and the rent for the first year is 21,000 dollars (£4,200), with an increase of 500 dollars (£100) each succeeding year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 21 :—

Egyptian Futures.

Sakel Contract.—Steady markets with a gradually hardening tendency have been generally experienced during the past week; whilst it is true that there has been rather more trade support in evidence, this has hardly been responsible for the firmer undertone displayed. Near positions continue to be depressed by further tenders of the white Egyptian varieties; the proportionate effect of these on the local position is out of all reason to the quantities involved, as apart from the contract losing ground as a trade and speculative medium thereby, importing business is at a standstill. Without the customary supply of contracts from the latter source the market is bound to be narrow, and unless conditions change rapidly we may witness what in ordinary circumstances would be quite moderate operations causing wide fluctuations.

As mentioned previously, trade interests have shown more activity during the week, but the offtake still runs a long way behind the normal experienced at this period of the season; perhaps on the whole spinners are not as much against the market as they were a short time ago, but they are not finding the necessary encouragement in the yarn demand to cause them to cover beyond their near requirements. Prices in Alexandria have been maintained at a steady level; receipts continue on a heavy scale with sufficient buying by importers in evidence to prevent any sustained pressure. For the immediate future we do not look for much change in prices; we rather doubt, however, whether any advances from the present level will hold unless accompanied by more trade support than accorded recently.

Upper Contract.—Business in this market has been on a broad scale, further selling against importations being met by speculative and straddle buying. Spinners' demand throughout the week has failed to attain figures recorded during October, and while this is due in certain cases to mills being well bought forward, the low basis of American staples has caused many concerns recently to adopt a more conservative attitude and to await further developments before entering into heavier commitments. We notice in certain reports from Alexandria that attention is drawn to the very large orders in importers' hands and to the heavy exports; we would like to point out that much of this cotton has been bought to be stocked at this side, and has not ceased to operate as a market factor. Whilst probably values will be held by the action of the American markets, any advances from the present level will meet with opposition, as we believe that owing to the heavy crop Alexandria will continue to be a ready seller for some little time yet.

Egyptian Spot.

Business has again been rather on the quiet side, in so far as the native Egyptian growths have been concerned, and at the moment signs of any immediate improvement are wanting. However, a substantial increase in the forwarding figures was recorded last Friday, and, although the demand for spot and forward cotton could hardly be called brisk, prices have again hardened some 15 to 25 points, in sympathy with futures.

The inquiry for Sakel cotton has been on a very moderate scale, and by far the greater part of it has been for "off," or "inferior" qualities; in fact, the demand for low cotton (any growth) has been quite a feature this week. A limited amount of business has taken place in Sakel at from 50 to 75 on, but an inquiry for anything above this range has been a rarity.

Uppers have been in fairly good request within the limits of 50 off to 25 on, January contracts. Quite an active demand has recently sprung up for low quality Uppers at from 9½d. to 10½d., but we doubt if our market has produced what was expected by the would-be buyers. The higher grades have once again been neglected. About 1,300 bales of Sakels, 400 bales of Uppers, have so far been tendered this month. Pilon and Nahda cotton have been in moderate request, but other specialities have been ignored this week. Some improvement has been noted in the offtake for Sudan Sakel.

Forwardings to spinners last week were returned as 10,483 bales Egyptian and 1,225 bales Sudan. Estimated spot sales for this week were returned at 1,700 bales Egyptian and 1,000 bales Sudan. Quotations of Sakel have been advanced 15 points on balance. Uppers are 25 points higher, and Pilon 20 to 25 points higher on the week. F.G.F. Sakel 10-day, 18.40d. F.G.F. Upper 10-day, 12.25d. F.G.F. Pilon 10-day, 13.00d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Company, in their report for the week ended November 15, state :—

Since our last report, the futures market has been only fairly active, but the tone has been decidedly firm. The week's summary of price movements is as follows :—Sakellaridis : November, 35.06 dollars, 0.44 dollars up; January, 35.55 dollars, 0.50 dollars up; March, 35.99 dollars, 0.48 dollars up; May, 36.40 dollars, 0.45 dollars up; November, 1929, 36.80 dollars, 0.60 dollars up. Ashmouni :

December, 22.15 dollars, 0.97 dollars up; February, 22.65 dollars, 0.98 dollars up; April, 23.10 dollars, 0.90 dollars up; October, 1929, 24.14 dollars, 1.11 dollars up.

Sakel.—Following the publication of the fourth American Bureau Report on the 8th inst., the week under review opened with very firm markets. The report gave as the probable figures of production 14,133,000 bales against an estimate of 13,993,000 bales the previous month. At the end of October last year the estimate was 12,842,000 bales, and the final outturn of the crop at the end of the season amounted to 12,783,000 bales. The figure of 14,133,000 bales was lower than that anticipated by the majority of operators, and its announcement and the fact that New York closed the same day with over 50 points advance, brought out a fair amount of bear covering here. The resulting advance was, however, not altogether maintained, as spinners did not seem inclined to follow the rise, and the demand fell away slightly, while the reversing of straddles by sales of Sakel against purchases of Uppers also told against the market.

Hedging against spot cotton has only been effected on a limited scale this week, in spite of the large arrivals which are now coming in from the Delta, and as an explanation of this we are of the opinion that business up-country this season has been conducted on a reasonable and commercial basis, so that when cotton arrives in Alexandria it is not thrown on the market for sale at any price, as has been too often the case the last few seasons. We continue to hold to our opinion that the market, for some time yet, will fluctuate round about present levels, as any tendency to higher prices will be curbed by the heavy movement of the crop, which must of necessity continue for some weeks more.

Against the second November tender, 8,250 kantars dockets were issued, making the total tender from the beginning of the month 15,250 kantars. The Sakel/Upper straddle (January/February) shows a difference of 1,290 points, against 1,338 points last week and 873 points at this time last year.

Uppers.—The sharp advance in New York met with a full response from the Upper market, the upward movement being reinforced by the undoing of straddles previously referred to. Demand from spinners this week has been better than last, and as indications seem to be in favour of a continuation of the improvement, we have

Notes of the Week.

Serbs and Croats.

The breach between Croats and Serbs will have been still further widened by a fatal collision between police and the townsfolk of Zagreb on December 1, the tenth anniversary of the creation of Yugoslavia. The immediate cause of the trouble was the action of some students in flying three black flags from the spire of the Cathedral; but it was a provocative and characteristically unstatesmanlike act on the part of the Belgrade Government to force official celebrations on Zagreb when the Croats had declared that they would have none of them. In view of the strained relations between the two peoples, it would have been thought that Dr. Koroshetz's Ministry would have made a virtue of necessity and postponed celebrations in honour of Yugoslav unity until such time as there was some degree of unity and harmony in the ten-year-old State to celebrate. Belgrade, however, was of a different mind. Troops and police, acting on orders from the capital, were mobilised for their part in the official ceremony. The sight of the black flags in the place of the national emblem set the crowd jeering at the henchmen of Belgrade, and when the flags were pulled down and the three perpetrators of the prank arrested, jeers gave place to stones. The inevitable shots were fired, and were returned from the crowd. There were a certain number of casualties, and "the day of rejoicing for the liberation of Croatia" became a day of mourning for some and of intenser indignation against the Serbs for all. The shooting of Croats in the Skupshtina has been capped by the shooting of Croats in Zagreb. It is easy to realise how the incidents of December 1 will add fuel to the fire of Croatian wrath, just at a time when every effort ought to have been made by Belgrade to avoid further exasperation of the Croats.

An Albanian Vendetta.

The little store that Albanians set on their own lives and on those of others, and the mental development of the nation as a whole, are well exemplified by the latest public crime in which an Albanian is implicated. A year

ago, Tsena Beg, Albanian Minister to Yugoslavia, was murdered openly in a Prague hotel by an Albanian student, who held the Minister guilty of subordinating his country's interests to those of Yugoslavia. In view of the feeling at that time between Albanians and Yugoslavs, the student's attitude provided some basis for a political crime. As the murderer was standing his trial in a Prague court last Friday, he was suddenly shot dead by a member of the public, who proved to be an Albanian, and a former valet of Tsena Beg. On the Minister's death he had entered the service of his brother, Gani Beg, and had accompanied his new master to Prague, as the latter wished to attend the trial of his brother's murderer. The valet does not appear to have been able to follow the short proceedings in court, as they were conducted partly in Italian, but he took exception to the prisoner's demeanour, and, according to his own statement, allowed his feelings to overcome him and fired at his late master's murderer. There is nothing in this admission incompatible with Albanian mentality, and it obtains some confirmation from the fact that Gani Beg was also present in court, where he would hardly have chosen to be, if he had been party to the murder. The deed indicates the long way that Albania has to go before she will have shaken herself free from the trammels of an oriental mediævalism. She was celebrating last week the sixteenth anniversary of her independence, or, more strictly speaking, of her establishment as a separate State.

The New Alphabet in Turkey.

December 1, 1928, will presumably be recognised henceforth in Turkey as the official date for the passing of the Arab script and the introduction of Latin characters. On that day Turkish newspapers were obliged to appear in the new guise. Already all signs of the Arabic characters have disappeared from public places; but the fierce wind of reform is being tempered to certain sections of the public. Government servants are being given until January 1, 1929, as the date from which all official correspondence must be written in Latin characters.

From that date, too all new books must be printed in the same characters, but certain official documents in Arabic script may circulate until June 1, and others, such as Bank notes, Treasury Bonds, share certificates and money orders are to retain their Arabic characters until further notice. The rapidity with which the adoption of the new alphabet has been carried through is a striking testimony to the driving power behind the Turkish reform movement, and it is certainly a reform which will add to the amenities of many foreigners in Turkey, for whom the learning of Turkish words will have been materially simplified.

The Wailing Wall.

The publication last week of a White Paper dealing with the recent incident at the Wailing Wall may serve, as is profoundly to be hoped, as the final word on a wretched controversy. The Paper emphasises what had already been made clear in these columns, that the problem has unfortunately been removed from the religious to the political or racial sphere, and is, therefore, the less susceptible of easy solution. It is because of this fact that items of "news" concerning the Wailing Wall have to be received with unusual caution. For instance, we were informed a short while ago that the Muslims, in order to assert their "rights" over the Western Wall, were adding new courses to it. This "information" not unnaturally provoked considerable indignation; one great journal in this country likened the process to "the construction of a cinema theatre on the top of Westminster Abbey." But in the House of Commons last week the Secretary for Dominion Affairs, Mr. Amery, who will not, we imagine, be accused of want of sympathy with the Zionists, stated, in answer to Lieut.-Commander Kenworthy, that he was not satisfied that this stone construction by the Muslims on the top of the Wailing Wall was a violation of the *status quo*. He added that it would appear that the construction above the building that surmounts a portion of the Wailing Wall was "an integral part of a structure begun many months ago," and that "it was never suggested, at the time when the work was started, that it would involve any infringement of the *status quo*." It will be seen, therefore, how cautiously all reports concerning this unhappy dispute should be received. The absolute impartiality of the Palestine Administration is thus proved anew; and in the gradual realisation of this official determination to respect justice, all echoes, let us hope, of this unhappy controversy will die away.

Syria and Turkey.

If the report from Angora be correct that an absolute deadlock has been reached in the negotiations, to which reference has recently been made in these columns, between the French Ambassador, Comte de Chambrun, and the Turkish Foreign Minister, Tewfik Rushdi Bey, the people of Syria, at any rate, already in suspense over the prorogation of the Constituent Assembly, will have fresh cause for anxiety. It is said that neither the French nor Turkish representative will recede from his previous position; and, indeed, it would be in the highest degree surprising if the French representative of Syria's claims were to withdraw from his internationally sanctified position in regard to the Turco-Syrian frontier. One fails to feel surprise at Turkey's action only because she has previously, in defiance of international arbitration, shown a flaunting face. In the meantime, however, Syrians and Turks are reported to be leaving their homes in the disturbed "No Man's Land" in the neighbourhood of the frontier; and the Turks of Alexandretta and Antioch, who were, of course, guaranteed special privileges by the Franklin-Bouillon Agreement with Angora, are said to be showing signs of restlessness. The Turks profess to be anxious over the problem of the Kurds living near the railway line; and in this anxiety, probably, is to be found the explanation of their refusal to accept the arbitration of the International Commission to which they had pledged their temporary word.

Kurds and Syria.

The fact appears to be that Turkey is still unsatisfied with the position of the Kurds outside her boundaries. One remembers the constant endeavours which had to be made to convince her that the Iraq Government, in retaining Southern Kurdistan within the Iraq State, would not allow this region to become a breeding-ground of discontent for Kurds in Turkey, who, as the Nationalists of Angora thought, might so be reinoculated with the virus of aspirations for independence. Now in Syria a similar problem seems to exist. Certain Kurds—13,000 tents is the number given—under Osman Agha Hajo have taken refuge within the confines of Syria. These Kurds are convinced that the policy of the Turkish Government towards their brothers in Turkey is hostile: they do not believe in the amnesty proclaimed by Angora towards Kurdish fugitives, for, according to them, such of the tribesmen as have been misled by Angora's promises and have returned to Turkey have been shot. Under the protection of Syria, therefore, these Kurds are said to be attempting to preserve some form of independence, an independence which the French authorities are by no means ill-disposed to accord to them, seeing that they could serve in some sense as a buffer-state between Syria and Turkey. With such talk of a "national home" for Kurds, the Turks are naturally very far from pleased; and hence, in all probability, their stubbornness in the negotiations over the Syrian frontier. The Kurdish problem, it would seem, is destined yet to have very considerable influence upon the politics of the Middle East.

Great Britain and the Yaman.

The official replies in Parliament are almost uniformly optimistic whenever questions are asked concerning British relations with the Imam Yahia of the Yaman, the progress of negotiations for a Treaty, and so on. Exactly why seekers after knowledge should receive such continual reassurance it is a little difficult to explain: the opinion of foreign observers, at any rate, does not appear to square with the belief that the Imam will take the British to his bosom without the cession of the small principalities between himself and Aden. However, when Lord Lamington in the House of Lords last week asked for information upon the relations between the Aden Protectorate and the Yaman, the Earl of Onslow, Under-Secretary for the War Office, affirmed that a statement had been received at Aden in September last that the Imam was willing to resume negotiations, that the British Government were prepared to recognise the complete independence of the Yaman provided that the old Anglo-Turkish frontier between the Yaman and the Protectorate were recognised by the Imam, and that a successful conclusion to negotiations now in progress was hoped for "within a reasonable time." From this reply it would appear that the Imam is prepared to recede from the position which he has formerly adopted in regard to his frontier—otherwise how could hopes be entertained of a successful issue? But there is in this reply little concrete ground for satisfaction. On few problems of Imperial importance have the shades of obscurity so densely settled as on this question of Anglo-Yamani relations. If the new Resident at Aden does succeed where others have failed, he will indeed deserve congratulations in full measure.

INDIAN NOTES.

The Country League.

The Memorandum for the Statutory Commission, which we print in another column, is the first publication of the newly-established Country League. When the question of forming the League was mooted in London last year it was felt that such an organisation was needed, in order that adequate and effective expression might be given to the opinions of the more stable elements in the life of India. It was, of course, recognized that, so far

as these elements are Indian, their various Associations, Societies, Leagues, etc., would voice their views; and, similarly, that the attitude of the Europeans would be defined by the European Association and the Chambers of Commerce. But it was, as we think rightly, maintained that, not only the Commission, but India and the British Parliament, would attach greater weight to a representation expressing the joint views of those, whether European or Indian, who have large material interests in India, and who are apprehensive of the results of the revolutionary changes contemplated by extremist politicians. It was to be, as we understood, the primary function of the League, on its establishment, to frame such a representation and to follow it up in due course with oral evidence before the Commission. The League has now been organised, and the memorandum has been framed and submitted to the Commission. We have read it with great interest, but we confess to a feeling of disappointment. That the task was difficult may be readily conceded; but we cannot help thinking that the League has not made the most of its opportunity. In fact the memorandum does not appear to be much more than a re-iteration of the recommendations which have been already put forward by the European Association and the Associated Chambers of Commerce. It is not, of course, to be adversely criticised simply for this reason. On the contrary both the European Association and the Chambers approached the problem in a statesmanlike spirit, recognising, as they clearly do, that large concessions to Indian aspirations must be made. But we had hoped that the League would have issued a reasoned statement defining the general attitude, towards further constitutional change, of the classes for which it stands, and making also an exhaustive examination of these various proposed changes as affecting their interests. The memorandum does not, however, say much of importance or interest beyond what has been said by other associations. As will be seen from it the League agrees that the final goal of Indian political development is the realisation of self-government as an integral part of the British commonwealth of nations. And it supports provincial autonomy, subject to the reservation that the Central Government should assume responsibility for the maintenance of law and order and the control of the Police. It is in respect, for example, of far-reaching recommendations of this character that we should have liked to see an attempt made to develop and to discuss the views of the members of the League. For any such recommendations are certain to be bitterly opposed by the political classes; and it follows that a well-considered and temperate statement by a representative body of the reasons upon which they are based would have been in the highest degree helpful.

A Supreme Court for India.

Sir Amberson Marten, the Chief Justice of the Bombay High Court, was a witness before the Simon Commission at Poona recently. His evidence was given *in camera*, and no complete report of it has, therefore, been issued. But according to some of the Indian newspapers one of the subjects with which he dealt was the proposed establishment of a Supreme Court in India. To this scheme the Bombay High Court is, Sir Amberson is reported to have said, in opposition. As we stated in these columns about twelve months ago, the scheme is one which has been under discussion for many years. It was originally put forward by those Indian lawyers who take the view that all Indian litigation should be disposed of in India. In other words, that the right of appeal to the Judicial Committee of the Privy Council, which Indian litigants now have, should be withdrawn; and that the final appeal from the provincial High Courts should be to a new appellate tribunal to be set up in India. Later on it was suggested that India, following the example of Canada and Australia, should have a Supreme Court, but that Indian litigants should be allowed to retain their right of appeal to the Judicial Committee. The argu-

ments in favour of the proposal, whether in the original or in the modified form, were never very strong. For it was unlikely that the cost of litigation would be less in the new Court than in the Privy Council; it was equally improbable that the delays would be lessened; and it was practically certain that the Indian Court would not command the confidence of litigants to the extent that the Judicial Committee commands that confidence. The proposal has now been brought forward in a new connexion; and some of its former opponents, for example the European Chambers of Commerce, are supporting it. They argue with some force that, if India is to be federalised, a Supreme Court will be necessarily a part of the federal machinery, as it has been found to be in other federal States. It will be required to interpret the Constitution, and to adjudicate upon the reciprocal rights and obligations of the Central and the Provincial Governments, and of the latter as between themselves. The Associated Chambers take this line in their memorandum to the Commission. Indian opinion is in accord with it, and the European Association is also, we believe, supporting it. But the Chambers stipulate that the right of the Indian litigant to appeal to the Judicial Committee must be preserved. The right is maintained in Canada and Australia; and in South Africa, although there is no actual right of appeal, the Royal Prerogative may be exercised on the advice of the Judicial Committee. Another argument which has been advanced in favour of a Supreme Court is that, if the Indian States come into the Constitution, a Court to the jurisdiction of which they will be amenable will be a necessity.

Difficulties in the Way.

As we have said, there is considerable force in these contentions. At the same time they do not overcome the practical difficulties to which we have referred. And we gather from the reports in the Indian newspapers that it was with these practical difficulties that the Chief Justice of the Bombay High Court was mainly concerned in his evidence. The question of the location of the Court is one of them to which he is said to have referred. If the location is to be Delhi—the capital of India—Counsel will have to be brought in each suit at enormous expense from Calcutta, or Bombay, or one of the other large centres, where there is a qualified Bar. If, on the other hand, it is proposed to locate the Court at one of the three Presidency towns local jealousies would be at once aroused. The alternative is a travelling Court which would be obviously a costly and unworkable proposition.

MACEDONIA: A NEW PHASE?

From the tenour of the Bulgarian Prime Minister's speech in the Sobranie last Friday it is evident that he was conscious of being able to approach the Macedonian question with far more general support than has been possible for any of his predecessors. The change in the public attitude has been summed up by one Bulgarian writer in the words: "Macedonia or Bulgaria." So long as the activities of the Macedonian Revolutionary Organization were directed against Yugoslavia it could count on the natural sympathy of the Bulgarian people with the Macedonian cause. In recent years, however, much of the energy of the Organization has been taken up with internal feuds, and with disciplinary action involving the lives of prominent Bulgarians. The sequence of murders in Sofia and elsewhere has been recognized as a reproach to Bulgaria. At the same time the outlook of the people has been undergoing a change. The policy of successive Governments of exemplary loyalty to the terms of peace imposed upon Bulgaria has been endorsed by the nation as a whole, and there exists in the country a genuine desire for friendly relations with Balkan neighbours, even though it may have behind it the conviction that only by such means can Bulgarian aspirations, as firmly held to-day as ever, be fulfilled. The excesses of the Macedonian Organization have not only kept alive the hatred of the Serbs, who have not been slow to remind Bulgaria of the fact, but have also been a source of embarrassment to any Powers that may have been anxious to befriend the Bulgarians. A new spirit is abroad in Europe since the War, however much the old Adam may be asserted here and there; but the Macedonian Organization has been unable to divest itself of the mentality of thirty or forty years ago. It was formed to fight constituted authority, and it has not had the intelligence to discover that methods which were successful against the Turks may not be so well adapted to the altered circumstances of to-day. The Macedonian question is a more subtle problem now than it was when the Turks ruled in the country, and it cannot be solved by a mere terrorist campaign.

M. Liapcheff spoke in strong condemnation of the violent methods of the Macedonian Organization, and called upon the Bulgarian people to react against them. At the same time he was equally candid in declaring that the real causes of revolutionary feeling are to be found in the régime in force beyond Bulgaria's frontiers, and he looked to the Governments of the Great Powers to play their part in solving a difficult problem, on the ground that such action would be the best method of working for the effective pacification of the Balkans. Although the Macedonian problem is not likely to be solved until action

on the part of Bulgaria and of Yugoslavia is co-ordinated, there can be no doubt that the first practical step must come from Bulgaria. The activities of the Macedonian Revolutionary Organization have long since brought its leaders within the arm of the law, and it is for the Bulgarian Government to deal with them. When it has done this effectually, it will be in a strong position in requiring of the Great Powers that the Yugoslav Government should cease to manufacture revolutionaries on its own soil and to compel their kinsmen on the Bulgarian side of the frontier to come to their assistance. The contention so long favoured by Belgrade that there is no Macedonian question will not hold water to-day. Successive Serbian Governments are responsible for a Montenegrin question, a Macedonian question and a Croat question, all within ten years of the founding of what was to have been the United Kingdom of the Southern Slavs. There has been a tendency among the friends of Yugoslavia abroad to make every allowance for the difficulties entailed in the handling of the Macedonian problem, and there has been no disposition to accept all the statements that have been circulated regarding Serbian administration of that province. The object lesson of Serbo-Croat relations, however, has disillusioned those who are in the best position to know of what the Serbian character under proper guidance is capable. It is realized that, if ten years of centralised power in Serbian hands have goaded into hopeless antagonism the Croats, who were prepared on the formation of the Kingdom to play second fiddle to their Serb brothers, the plight of Macedonians forced against their will under the Serbian yoke may well have been unenviable. In these circumstances it would be idle to suppose that a complete solution of the Macedonian problem can be found in the suppression of the Revolutionary Organization on Bulgarian territory. This step is essential, but, unless it is accompanied by a radical change in the treatment of Macedonians in South Serbia, the present leaders of the Organization will find others, driven by Serbian action, to take their place.

As soon as definite military action has been launched by the Bulgarian Government against the Revolutionary Organization in the Petritch district, or wherever it is to be located, the French and British Governments, who urged the step recently upon the Bulgarian Cabinet, should call upon the Belgrade Government to proclaim an amnesty in South Serbia and to change all officials who have become marked men for their ruthless application of the former methods of oppression. There may be no precedent for such a step on the part of the two Great Powers, otherwise than their recent representations to the Bulgarian Government. On the latter occasion they ran the risk of driving from office a sound and capable Government and exposing Bulgaria to a period of political chaos. In the case of Yugoslavia no such danger offers; the existing Government under Dr. Koroshetz makes no claim even to be a united body within its own ranks; not satisfied with the alienation of the Croats, it has now provoked fatal riots in Zagreb by the attempt to force upon the inhabitants a Serb celebration with which they had refused to identify themselves. The continued domination of a clique within the Radical Party must arouse misgivings among the Serbs as a whole. Inexperience and excessive nationalism may prevent them from devising a remedy of their own accord, but their sound sense and self-interest will prompt them to welcome any means of escape—from whatever quarter it comes—from a demoralising and humiliating position.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, November 21.

The Population of Constantinople.

M. Jacquart, the specialist who was entrusted by Angora early this year with the Census of the population of Turkey, has just published a "Statistical Year-book of the Turkish Republic," portions of which make interesting reading.

The population residing within the administrative limits of the Prefecture of the City of Constantinople is indicated as totalling 690,635 souls, of whom 625,400 are classified as Turkish citizens and 65,235 foreigners. Of the latter, those of European origin, numbering 52,234 are given as: Hellenes 25,419; Italians 7,190; Russians 5,647; Bulgarians 3,470; Serbians 3,046; British 2,475; French 2,245; Germans 1,387 and Albanians 1,355.

In regard to the balance of 13,101 foreign subjects, Asia and Africa together account for 6,840, the United States and Australia for 386, the rest figuring under "miscellaneous" and "unassigned."

The number of Hellenic subjects at 25,419 is well below the figure currently assumed, up to the issue of this publication, to be residing in this city—to the undisguised satisfaction of the Turkish Press—whereas the Russian quota of the foreign population, numbering nearly 6,000 souls and embracing, presumably, both white and red Russians, is very considerably in excess of the total supposed to have been left in Constantinople after close upon five years of unintermittent emigration of these people to Europe and America. Of the 2,475 British subjects, the bulk are known to be Maltese.

An interesting aspect of these figures—one peculiar to this city of many tongues—is the following classification of the Constantinople population into sub-divisions according to the language (mother tongue) spoken:—

Turkish 477,449; Greek 89,748; Armenian 44,529; Jewish 38,890; French 5,751; Albanian 5,546; Italian 4,765; Bulgarian 3,475; Arabic 2,913; Kurdish 1,673; English 1,287; Persian 1,060; Tartar 445; Circassian 127; and Miscellaneous 12,977; total 690,635.

The Turkish language is, therefore, the mother tongue of, roughly, 75 per cent. only of a Turkish population of 625,400, the balance being accounted for by Turkish citizens speaking the following languages: Greek 61,602; Armenian 43,505; Jewish 35,893; Albanian 4,293; Arabic 2,585; Kurdish 1,642; French 1,480; Bulgarian, 1,005; Persian 341; Tartar 333; Italian 273; English 84; Circassian 60; and various languages 2,753. Total 155,851.

It is interesting to observe that, although the Spanish language is the mother-tongue of many thousands of Constantinopolitans, no allusion whatever is made to this fact in M. Jacquart's statistics, the bulk of the Spanish-speaking element being classified under "Jews" speaking "Jewish." The Italian, "Lech" or Polish, Yiddish and Turkish languages, spoken almost exclusively by certain classes of Jews, are apparently also classified under both

"Jews" and "Turkish citizens speaking Jewish."

In regard to religious beliefs, the population of Constantinople is given as being composed of: Muslims 447,740; and Non-Muslims 242,895; total 690,635.

The non-Muslims are classified as: Greek-Orthodox 97,077; Armenians 52,576; Jews 46,698; Catholics 22,578; Christians (?) 15,945; Protestants 4,289; and Miscellaneous, unknown and atheists 3,723; total 242,895.

It is not clear what the 15,954 "Christians" are meant to represent in this last schedule, the figures of which, save for 46,698 inhabitants of the Jewish rite, represent denominations of the Christian faith only. It may be that some slip has occurred in the classification of the 52,576 Armenians, who may belong to either the Gregorian, Catholic or Protestant Church, or that Latins, Tiniotes, Chaldeans, Uniates, Copts and others may have been lumped together simply as "Christians."

Commission of Inquiry in Western Thrace.

At the request of the Turkish Delegation sitting on the Mixed Commission for the Exchange of Populations, a specially constituted Sub-Commission was instructed some weeks ago by the latter to proceed to Western Thrace with a view to inquiring *in situ* into the alleged ill-treatment by the Greek Authorities and population of the Muslim inhabitants of that region.

Jemal Husni Bey, President of the Turkish Delegation, having claimed the right to a seat on the Sub-Commission, the main Commission agreed to the Turkish demand, simultaneously appointing to that body, however, M. Diamandopulo, President of the Greek Delegation. Various difficulties and "contretemps" having been overcome by the tact and *savoir faire* of the President of the main Commission, its off-shoot duly set off *in corpore* for the theatre of the alleged misdeeds.

What exactly happened in that relatively unfrequented hinterland it is not easy to say, but, at all events, the Sub-Commission is back in Constantinople again without apparently having achieved any useful purpose—if one may judge by the somewhat acrimonious articles which are appearing in both the Turkish and local Greek papers. The Greeks accuse the Turkish members of the Sub-Commission with having endeavoured to steal a march on them by cross-questioning Muslims in the absence of any Greek Delegate, while the Turks complain that the Greeks did all they could to prevent the Turks from putting any questions at all.

Although it is highly improbable that the *impasse* thus created will lead to anything more than one of the usual little storms which occasionally ruffle the otherwise comparatively smooth waters of the Exchange of Populations Commission, it cannot be denied that for some considerable time past feelings have been running high in certain official Turkish circles over these alleged grievances in respect of the Muslim population of Western Thrace.

A Sub-Commission composed entirely of neutrals—of whom there are many attached to the Commission of Exchange—with one Turkish and one Greek Delegate, would probably have been in a position to get at the truth within a relatively short space of time, to the satisfaction of both parties concerned.

Cairo, November 24.

The Prime Minister's Tour.

The Prime Minister has continued his triumphal progress through the provinces, and last week made an exceedingly successful tour of Sharkia and Menufia. The object of these visits has been partly to counteract the wholly unjustifiable campaign against the irrigation schemes made by the Wafd, which, in order to bolster up its position and make that of the present Cabinet difficult, has not hesitated to appeal to the passions of the fellahin; and partly in order, in laying foundation-stones of the provincial hospitals, to give everyone clearly to understand that the Government intends to put into full execution its programme of economic and social reform. Both these objects appear to have been attained. On the one hand there is plainly visible in the country a wave in favour of Gebel Aulia, the work on which will be started as soon as agreement has been come to in regard to the questions of compensation to the people whose land will be inundated when the reservoir has been created, and of the control over the water which will thus be made available. On the other hand, it has been possible during these tours for the people to see that the authorities have not waited for the foundation-stones to be laid actually to start the work. Indeed, so much has already been done, that most of the thirty hospitals projected for the current year, certainly those allotted to Lower Egypt, will be ready for inauguration by next May.

The Season.

Shepherd's Hotel has re-opened its doors, a sign that the winter season has started. Great preparations have indeed been made—most of the hotels have increased their accommodation—in anticipation of the annual tourist invasion which this year is stated by responsible authorities as likely to be even greater than the previous year. As yet no definite programme for the entertainment of our visitors has been drawn up, but, to judge by the amount of fare provided at the present moment, ample opportunity should be afforded them to while away such time as may be left to them after they have finished with sight-seeing and the normal round of social engagements. At the present moment it is somewhat interesting to note there are no fewer than four English shows on in Cairo, *viz.*, the Atkins Shakespearean season at the Royal Opera House; the Loie Fuller Dancers at the Kursaal; the Great Carter at the Ezbekia Theatre; and the Handley circus at Abbassia. In addition, Pavlova and her troupe are at present in Alexandria and will be here at the beginning of next month, when the place of the Shakespearean troupe at the Opera House will be taken by a short season of French comedy heralding the Grand Opera season, which always holds the boards there.

Chrysanthemum Show.

The Egyptian Horticultural Society held its annual chrysanthemum show at the Semiramis Hotel this week. It was opened by Lady Lloyd, and proved more than the usual success. The spectacle in the hotel hall presented by the collection was really most beautiful, and the

organisers as well as the exhibitors are warmly to be congratulated on the result of their efforts.

Lectures.

Two highly interesting lectures were given this week at the Royal Geographical Society's hall. The first was by Professor Garstang, visiting lecturer at the Egyptian University, who spoke on the influence which ancient Egyptian culture had had on all the countries adjacent to her, even into the heart of Africa. The second was given by Professor Bonamy Dobree on Thomas Hardy and his critics. Both lectures, which are part of a series, that the lecturers in question are giving, were attended by the High Commissioner, and attracted a very large audience who followed them with deep interest.

A Banking Innovation.

This week, for the first time in the annals of banking in Egypt, the banks ceased to have direct relations with one another in the matter of cheque transactions and passed all their operations through a clearing house which by agreement between them has been installed in the premises of the National Bank of Egypt in Cairo, under the control of an independent committee composed of representatives of subscribing banks, with the Governor of the National Bank of Egypt, or in his absence the Sub-Governor, as its president. The need for this innovation has long been felt, for the cheque business has gradually assumed very great proportions. Incidentally, the use of cheques, not so very long ago disliked by Egyptians, has become quite popular among them, and this has added to the volume which the banks have been called upon to handle daily. As far back as 1907 an attempt was made to introduce a clearing house, but it met with little response from the foreign banks, *i.e.*, non-English banks, and it is only now as a result of the increase in business that the efforts in this direction have been successful. The innovation is for the present being restricted to Cairo, but if, as is expected, it proves satisfactory, a similar clearing house will be established in Alexandria, where, although the number of cheques passing daily is not so large, the amount involved is infinitely greater owing to the cotton and grain transactions.

The Late Major Thompson.

It has been with the greatest regret that not only the British but also the Egyptian and foreign communities have heard of the sudden death of the President of the International Quarantine Board of Alexandria, Major C. P. Thompson, which occurred this last week. Major Thompson had seen long service in the Egyptian Government before he succeeded Dr. Alexander Granville as head of the important institution which looks after the health of the pilgrims, and whose main duty is to prevent epidemics spreading to Europe. He had gained universal esteem by his ability, and his character and temperament eminently fitted him for the difficult and at times delicate work falling to his post. His death is all the more deplorable in that the number of Britons who combine a wide knowledge of the country with the peculiar qualities needed for handling its difficult problems has become very small. Indeed, his death is as much a loss to Egypt as it is to the British community.

THE HIJAZ.

Jidda, November 20.

The End of Summer.

The last hours of October drowned the long summer with a deluge of rain, accompanied by a veritable tornado, which between them did considerable damage to a number of houses in Jidda, including the office of the British Agency. Last winter, was, as I have duly recorded in my letters, practically rainless, and the recent fall breaks a spell of drought which has lasted since November 25, 1926. The actual amount which came down on this town within a space of three hours was 2.57 inches, and since then further showers have brought the total rainfall up to date to 3.57 inches. Yanbu appears to have done equally well, if not better, and there is great rejoicing in the land. The desert is already clothed in green velvet and will soon be blossoming like the rose. The year's water supply is well assured, and the only unhappy man is the Director of the Condenser, who wonders where he will find a market for water.

The Coming Pilgrimage.

All thoughts are naturally concentrated on the prospects of the pilgrim season, which opens within the next few days with the arrival of the first batch of pilgrims from Java to the number of about 250. Under the new regulations no company can deal with the motor-transport of pilgrims to the Holy Cities unless it has a minimum of 30 cars. Accordingly the petty concerns of last year have amalgamated into larger groups, and a number of new associations have come into existence. The general impression is undoubtedly that the present season will eclipse all its predecessors in respect of numbers, which it may well do in the absence of scares that kept some pilgrims away last year.

General News.

Advices from Riyadh indicate that all is proceeding

in the deserts of Arabia according to programme—the King's programme, needless to say. South of Taif the tribe which ventured to question the Government's right to collect taxes in its highland fastness no longer exists to repent its folly, and the force which went to deal with it is back at Taif, where the Amir Faisal has gone to superintend the division of the spoils. Vague rumours of unrest among the tribes of Trans-Jordan reach us here, but too indefinitely to discuss.

The foreign element in Jidda society is slowly creeping back to the scene of its varied labours. The British, Italian, and Dutch Consuls are still away, but Sani Bey, the Turkish representative, is back from leave, restored in health and contemplating a visit in the near future to the Yaman. M. Hakimoff, the Soviet representative, is gone, and his successor is duly installed. And Bairam Bey now represents Egypt *vice* Said Bey transferred to Constantinople.

H.M.S. Dahlia visited Jidda on the 16th for a few hours *en route* to Malta. And in October two Dutch war vessels on their way to the East Indies paid a formal visit to this port, where they were welcomed and their officers and crews entertained by the Amir Faisal himself, who came down from Mecca for the purpose.

Sofia, November 20.

Bulgaria and her Neighbours.

There is a progressive improvement in the general situation of the Balkans, an improvement which can best be seen in the evolution of Bulgaria's relations with her neighbours.

First should be noted the negotiations now taking place between Bulgaria and Turkey for the conclusion of a Treaty of Arbitration. Recently, it is true, difficulties have been encountered in these negotiations, arising out of the precise formula to be adopted; but this dispute will soon be settled, and we shall shortly have an understanding which will begin an era of complete and definitive peace on this side of the Balkans, the Bulgarian kingdom and the Turkish Republic having already concluded Treaties of Friendship and of Commerce.

Bulgaro-Roumanian Relations.

The constitution of the Maniu Cabinet in Roumania has been welcomed in Bulgaria, where it is hoped that the new Government's promises in respect of ethnic and religious minorities must result in the alleviation of the lot of Bulgarians in the Dobruja. Especially are the Bulgarians pleased at the political amnesty and the promise of agrarian reform indulged by the Maniu Administration.

Hopes are high now of a close understanding between Roumania and Bulgaria, for M. Maniu has resolved to rule out the past and think only of the future.

Bulgaria and Yugoslavia.

To judge by appearances, the situation as between Bulgaria and Yugoslavia is much less satisfactory. But in reality, despite the maintenance of the order to keep the Yugoslav-Bulgarian frontier closed (the closing was decreed in October 1927 after the murder of General Kovatchevitch at Ishtip) Yugoslavia has never been better disposed towards Bulgaria, and quite recently, the Yugoslav Minister at Sofia, M. Liuba Nechitch, told M. Bouré

openly that the pourparlers between M. Venizelos and Belgrade would not have any ill effect on the interests of Bulgaria—on the contrary, Yugoslavia's conclusion of an agreement with Greece would depend largely on the attitude of the Bulgarian Government. This was evidently an invitation to Bulgaria to abandon her reserve and to explain her position to her neighbours, in the interests of Balkan peace and prosperity.

Greco-Bulgarian Cordiality.

An even more direct appeal for friendship was made by Greece on the occasion of the handing of Letters of Credence by the new Greek Minister, M. Dendramis, to King Boris. In presenting his credentials he told the King that he had been charged by his Government to seek an entente with the Bulgarian Government; and King Boris significantly welcomed this prospect of an alliance between the two peoples, actually mentioning the words "Balkan concord." These words were thus used for the first time since the War, and signify a new element in the Balkan situation.

Naturally, it will take time to establish this sentiment of Balkan solidarity. But undoubtedly there is considerable diplomatic activity which promises well for the Balkan peoples. Even the thorny Macedonian question is not insoluble, as it is commonly supposed, provided that the Yugoslav Government exert the necessary good will.

GREECE.

Athens, November 24.

Brigandage at a Discount.

Loaded with chains, the famous Rentzairo brothers arrived in Athens a few days ago. The Bulgarians were evidently not taking any risks, since from the day of their capture the prisoners had not been allowed to change their shirts. With these ruffians under lock and key in Athens, and the Koumbaio brothers under lock and key in Corfu, Koutsovélis wounded and Bambanis on the run, brigandage is at the moment at a discount. M. Venizelos' speech at Yánina in July has proved no idle promise. However, brigands have a way of escaping from Greek prisons, and satisfaction at their capture is tempered by the reflection that they have not yet been brought to justice. It is well known that sinister elements in the towns are at the back of the brigandage, who are usually agents rather than principals. The trial should produce some interesting revelations. One pictures respectable citizens of Yánina and Preveza feeling distinctly uncomfortable now that their protégés are in custody. The brigands deserve no sympathy (some of them have 40 murders and more to their credit), but it is earnestly to be hoped that when the day comes for them to face the firing squad, some of their black-coated confederates will be ranged along with them, and pay the penalty of their squalid and cowardly crimes.

A Newspaper Battle.

During the last few days a battle between two leading newspapers has contributed to the gaiety of life. The protagonists were the *Eleftheron Vema* and the *Patris*; the latter owned by a certain M. Simos, who began life as a baker in Roumania, where he laid the foundation of a fortune by the ingenious device of concealing pieces of money in his loaves. In Athens he has been prominent as a strong Venizelist, the owner of a newspaper, and a champion of "purity in public life." However, the *Eleftheron Vema* acquired some of his private correspondence, and proceeded to publish it in facsimile, with suitable comments. When the mutual recriminations were at their height, M. Venizelos, it seems, must have sent for the combatants and told them this sort of thing must stop, the washing of so much dirty linen in public not being in the interests of the Party. So the incident closed, but not before M. Simos had unwittingly contri-

buted both to contemporary literature and contemporary art—to literature, because his published letters were gems of self-expression and to art, because his rather remarkable appearance inspired the cartoonist of the *Eleftheron Vema* to some of his most amusing, if malicious, effrontery.

Dr. Mackenzie and Dengue.

A few belated cases of dengue are reported, but the epidemic is definitely over—for this year. It is perhaps not remarkable that Dr. Mackenzie's report has not been made public—only extracts have appeared in *Hygieia*, a small paper that nobody sees—as his comments on the sanitary conditions in Athens were not flattering. The report should, however, be published in leaflet form and the widest possible circulation given to it. The most hopeful sign is that the authorities have recognized their inability to cope with the problem unaided and have decided to obtain the assistance of the League of Nations. Left to themselves, the Greeks would prefer having the epidemic over again, to making the collective effort required to prevent it. The attitude of the sanitary authorities is well illustrated by the condition of the road which skirts the principal hospital—the Evangelismós—of the city. Not being regarded as a thoroughfare, this road is left in a state of nature—i.e., in summer it is inches deep in dust, and after rain turns into a series of stagnant pools, from which the mosquitoes sally forth to do their deadly work. In addition, it is used as a rubbish-heap and for other purposes. On the other side of the road is Greece's most up-to-date school, where experiments in mixed education on most modern lines are made.

Repeated complaints produce no effect; nor in this case can the blame be laid on the Power and Traction Company, who are generally held responsible for most evils, preventible or not.

Poppies on Armistice Day.

The sale of poppies on Armistice Day realised over £50—considerably more than last year. While the Greeks are adopting the idea of "The Unknown Soldier," and plans for a monument to be erected at the foot of the Acropolis already exist, the idea of the two-minutes' "Silence" does not appeal to them.

Belgrade, November 29.

Tenth Anniversary of Yugoslav Union.

On December 1 the tenth anniversary of the Union of the Serb, Croat and Slovene peoples is to be celebrated in Belgrade. Preparations are being made by the Sokols and the national organisations to hold great processions and entertainments and to make this great national festival a day of rejoicing. A shadow, however, will be cast over the proceedings by the declaration of M. Pribitchevitch and the Croat leaders that their followers, representing a very considerable part of the Yugoslav people, will take no part in these celebrations. Owing to the difficulties of the present internal political situation it is almost impossible accurately to estimate what progress has been made in these ten years. Yet a glance at the

towns of Belgrade, Zagreb, Liubliana and especially Skoplye cannot but convince anyone who knows what these towns were like ten years ago that from the materialistic point of view at least great advances have already been made, despite all the difficulties of post-War years, war exhaustion, all the more severe since the Serbs were at war continuously for almost eight years, and failure to obtain financial help from abroad. Ten years are so short a period in the history of a nation which has been divided for so many centuries that it is impossible to judge whether the present difficulties are likely to have a permanent effect on the destiny of this people or are merely of a transitory nature. There exists a firm belief among foreigners well acquainted with the country that its great vitality will enable it to muddle through in the long run.

The Political Situation.

The changes expected on the return of King Alexander from Paris have not yet materialised. The King consulted all the party and group leaders in Belgrade, but, just when it seemed that a crisis was about to begin, he left Belgrade for Topola, where it was reported he intended to stay until after his Slava day, December 13. His sudden return this evening may mean that changes are about to begin, although this is doubted owing to the nearness of December 1.

The differences between the various factions of the Four-Party Coalition tend to become more and more acute. It is reported that M. Davidovitch has declared that, unless certain urgent measures, including a Bill on Agrarian Reform in Dalmatia and one against corruption, are passed before the Budget is voted, his party will leave the Government. But the question of agrarian reform in Dalmatia is one on which the Radicals and Democrats fail to agree, and it is very possible that this may lead to a breach between them. This possibility is increased by the illness of M. Marinkovitch, Minister of Foreign Affairs, who represents those elements in the Democratic party most closely associated with the Radicals. The Muslims too, insist that, unless their demand for the changing of the *Veliki Jupani* (Governors) of Sarajevo and Tuzla is granted, they will go into opposition.

While no official reply has been given by the Zagreb leaders to the proposals made by Father Koroshetz on behalf of the Belgrade Government to M. Savchitch, on the grounds that they will not even consider the opening of negotiations until their conditions precedent, the dissolution of the "rump" Parliament and the holding of new and free elections, have been fulfilled, it is to be judged from recent statements that they do not approve of these proposals. The Zagreb attitude is that the necessary changes in the Constitution can be decided upon only by a freely elected Parliament and, therefore, no agreement can be reached on this matter before free elections have been held. They state that the initiative for the renewal of relations can come only from King Alexander himself.

Stephen the Martyr.

It is reported that the Zagreb Municipality has decided to re-christen the famous Markov Trg and call it Stepan Raditch Trg, in memory of their late leader. Streets in the vicinity will also be renamed in memory of Pavle Raditch and Jura Basaritchek. Stepan Raditch, who was always held in high respect and affection by the Croat peasant masses, is now considered to be a martyr in the cause of Croatian liberty. Recently one of the two new bells of the Catholic Church at Gradetz, near Krizyevatz in Croatia, was christened St. Stephen the Martyr in memory of Stepan Raditch.

Pigs and International Relations.

Fear of Serbian pigs was, according to an article in *Trgovinski Glasnik*, the cause of the breakdown of negotiations between Yugoslavia and Czechoslovakia for the

conclusion of a commercial treaty. The Czech agriculturists were so insistent on the need for protection against this menace that they made it impossible for an agreement to be reached, despite the political friendship between the two countries and the great value of the Yugoslav market from the point of view of Czech industrialists.

The writer of the article recalls that this is not the first intervention of the Serbian pig into the world of diplomacy with disastrous results. The menace of Serbian pigs to the prosperity of the Hungarian landowners led to the "Pig War" between little Serbia and the Austro-Hungarian Empire, and it is even suggested that the Hungarians' desire for effective and lasting protection against them was not unconnected with the outbreak of the world War itself.

Italy on the Offensive.

Despite the formal ratifications of the Nettuno Conventions relations between Italy and Yugoslavia do not seem to improve. While the Yugoslav Government forced the Conventions through Parliament even at the cost of bloodshed and grave internal disorders and has since then constantly suppressed even the most mild anti-Italian demonstrations with a rigour and fury which have caused considerable popular indignation, anti-Yugoslav manifestations in Italy are allowed to pass unchecked and are even given a considerable measure of official support. Thus there has been a revival throughout the whole of Italy of the movement for the "freeing" of "Italian" Dalmatia and this has strong Fascist, i.e., official, support and the Government organ, *Giornale d'Italia*, has published a series of long special articles in favour of the policy of forcible denationalisation of the Slavs of North-East Italy. The methods proposed are the intensification of the persecution of the Slav priests, teachers and journalists and the colonisation of the districts inhabited by Slavs by groups of Italian ex-service men. Great indignation has been expressed in the Yugoslav Press, especially in the Zagreb and Liubliana papers, at the arrest of Leopold Kemperl, Editor of the *Gorichka Straza*, and his colleagues, Stanitch and Polyantchek. The Italians claim that these journalists were stirring up the otherwise satisfied people of Istria to hatred against Italy and were paid and controlled by Yugoslav nationalist organisations. The Yugoslavs maintain that this is merely an excuse for the crushing out of yet another of the few remaining Slav papers published in Italy and for preventing the half million Slovenes and Croats in Italy from using their own language.

English Art in Yugoslavia.

On Sunday last Mr. Kennard, British Minister in Belgrade, opened an exhibition of English Art in Liubliana. Exhibitions will later be held in Zagreb and in Belgrade. The pictures and sculpture shown are pieces which formed part of the great international exhibition of modern art recently held in Venice, and the exhibitions have been arranged by the Yugoslav Association of Great Britain under the high patronage of King Alexander.

Greece is one of the latest signatories to the Kellogg Treaty against War.

The Albanian Constituent Assembly last week finished its labours, and, in conformity with the new Article that has been added to the Constitution, has now been transformed into a Parliament.

The first submarine of the Yugoslav Navy was launched at the end of last week at Nantes. This vessel, of 630 tons, named the *Smeli* (Audacious), is 227 ft. long, with a beam of 19 ft., and is driven by two motors of 740 h.p. each.

General Gouraud, Military Governor of Paris, will leave on December 13 for India. General Gouraud, who has served extensively in the French colonies, has long been desirous of examining at close quarters the problems of British administration in India. He is expected to go as far as the North-West frontier. It is understood that he will be the guest of the Viceroy at Delhi.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 15.

The Political Tangle.

Mr. Bepin Chandra Pal, who writes his political article the day before I write mine, and therefore reviews the same ground, begins his article of this week with:—

"Nationalist Indian politics stand divided to-day, as they have stood for the last nine or ten years, or ever since Mahatma Gandhi captured the Indian National Congress, into two divisions; one representing the real political thought, and the other the frenzied political passions of the people."

After a review of the circumstances that favoured, or made possible, the Mahatma's emergence into political life, Mr. Pal has this:—

"From that time forward there has grown up a large school of Indian politicians who have made it their business to exploit popular passions and ride on the wave of popular sentiments, to advance themselves into positions of leadership for which few of them have laboured to qualify themselves. The result is that for the last nine or ten years Indian nationalist politics have been divided into two groups, one a small number who think politically and not mediocally, and who, with a clear grasp of actualities, try to follow the lead of practical statesmanship, and the crowd who neither understand nor care to understand the actualities about them, or who have any regard for consequences except the promotion of their private or personal interests in the case of those who are struggling for leadership either in the Press or on the platform, and, in the case of the thoughtless crowd who shout after these leaders, the satisfaction of their sentiment."

There are, then, three schools of Indian politicians; for the two groups that Mr. Pal writes of are both against co-operation with the Statutory Commission. An important group of Indian politicians, as you well know, is co-operating with the Commission, and never had any intention of not doing so. That group is at work, but at the moment it is working out of sight. It might perhaps be seen, if the other two groups were not raising such a dust. It is those two groups, which Mr. Pal has, perhaps, less right than he thinks to call nationalist, with the implication that the third is not nationalist, that must engage our attention. Those two groups and the dust of them.

A Game of Bluff.

To the group of which Pandit Motilal Nehru is the leader to-day, the group that Mr. Pal gives his benediction to, Lala Lajpat Rai belongs. We have had a rather involved pronouncement from him this week:—

"I am sorry I cannot be enthusiastic over the proceedings of the All-India Congress Committee. To me it seems that they were mostly farcical. Of the younger men, the only two whose sincerity, high character, and scholarship I value, are Pandit Jawaharlal Nehru and Mr. Subhas Chandra Bose. I have no doubt that everything they say they mean. Yet with all this I am afraid I cannot regard them as safe guides at the present juncture."

I doubt myself if Mr. Subhas Chandra Bose does always, or often, mean all that he says, and that Lala Lajpat Rai thinks he does is difficult to believe; for, after declaring that (to give the *Statesman's* report), "he was certain that those who advocated Dominion Status could not successfully oppose the movement for complete independence," he went on to say that "he could not himself support it, first, because the majority of those who talked of complete political independence were indulging in this talk as a bluff. They had no programme and did not mean business."

If the majority is only bluffing, has no programme and does not mean business, it is difficult to see how Pandit

Jawaharlal Nehru and Mr. Bose can have a programme, and mean business; for they are the most intelligent of the lot of them.

We have also had a Press statement from Mr. Fazal Ibrahim Rahimtulla, Secretary, All-India Muslim Conference, who attended the United Provinces All-Parties' Muslim Conference as a visitor. (They follow each other like sheep—in the things they do, and in the names they call them by.) "The impressions created," Mr. Rahimtulla says, "by the Cawnpore Conference should serve as an eye-opener to all those who are still supporting the Nehru Report. Although it was wrong to say that Muslims wanted to condemn the Report, they could not help feeling that it had overlooked their claims. Until the Report was amended to provide adequate safeguards, Muslims could not accept it."

If there has been an All-Parties' Muslim Conference at Cawnpore, Lucknow has witnessed a special session of the All-India Muslim League Council, one attended by the Maharaja of Mahmudabad, Sir Syed Ali Imam, Dr. Kitchlew, Maulana Shaukat Ali, and some forty others. Here the Nehru Report was commended to the League itself, while the Maharaja of Mahmudabad was elected to preside over the next session of the League, which will be held in Calcutta next month.

The whole story is one of big Sixes and Sevens and little sixes and sevens; of pots calling kettles black, and kettles calling pots black. What Sir John Simon must be thinking of it one can easily guess. There is nothing in India but has some resemblance to a Gilbert and Sullivan opera. It has been so all the time I have known the country.

The Depressed Classes.

If Sir John Simon had to hold the balance only between (1) those Hindus and Muslims who think the time not ripe for full Dominion Status, (2) those Hindus who think the time is ripe, (3) those Muslims who think the time is ripe, but are ready to quarrel over safeguards, (4) those Hindus and Muslims who will have none of Dominion Status, because they think the time is ripe for complete political independence, and are for cutting out the paltry Dominion Status stage—if Sir John Simon had only to hold the balance between all those, it would be bad enough; but he has others to listen to—the Europeans, the Anglo-Indians, the Country League, and, lastly, the Depressed Classes. A memorial presented this week to the Statutory Commission on behalf of those classes, makes interesting reading.

"We belong to an ancient race which ruled India about 5,000 years ago, prior to the invasion of India by the Aryans. The Aryans, whose present descendants are called high-class Hindus, have all along been treating us with the most inhuman brutality, so that our unlucky community, numerically large as it is, is now little more than a mere name. In spite of the fact that there are some highly-educated and capable men in our community, we are not given any honourable status in society, nor the right of ownership of anything. We have not even the right to safeguard our individual lives. This deplorable condition of the mute millions of the Depressed community is due to the horrible treatment meted out to us by high-class Hindus in consequence of the pronouncements of the ancient Aryans, which were embodied in the *Manu Smriti* and a lot of other Hindu scriptures of that ilk."

The deputationists who presented the memorial stated that they did not wish to be called Hindus but *Addharmis*, and in the next census they would describe themselves as *Addharmis*. The word is so given in my newspaper. It should be *adharmis*, *dharmi* being what a man with a religion is called; a man without one being *adharmi*. It is very strange that the descendants of a once-ruling race should, first, want to be named in their conquerors' language; for *dharmi* is, of course, Sanskrit; secondly, that they should choose a word that is a term of abuse in that language.

THE STATUTORY COMMISSION IN INDIA.

Memorandum by the Country League.

The following is the text of the Memorandum submitted by the Country League to the Statutory Commission:—

India's Final Goal.—Our Members are in complete accord that the final goal of Indian Political Development is the realisation of Self-Government as an integral part of the British Commonwealth of Nations. We can visualise no future for India that does not maintain a close connexion with the British Empire and that does not make provision for a Federation of Indian States and British India. In so far as British India is concerned we do not, however, commit ourselves at this stage to the definite assertion that Self-Government in India must necessarily be of the responsible type of the British Constitution, and it is more than probable that the eventual Constitution evolved for India will vary considerably from the British model. There is, however, no denying the fact that the past close relations between Great Britain and India have implanted, in Indians, a desire for a Constitution based on British traditions, and that this should be of a responsible character. That being the case we agree that this form of Government should, in the first instance, be given the fullest possible trial.

Local Self-Government.—The training ground for the electorates as well as for the individual is primarily to be found in the work of Local Self-Governing Bodies. The liberal powers which have, under the Reforms, been granted to these bodies should be continued and extended, and the franchise for them should be enlarged. It will be necessary for some time to come that the activities and work of these Bodies should be watched over and controlled by higher Authorities, which might well take the form of Local Self-Government Boards. These Boards should have adequate powers to take over these Bodies, should mal-administration necessitate such action. There will always be necessity for the careful auditing of funds in their charge, and steps should be taken to bring home to the Members of such Bodies their financial responsibilities, by the introduction of a system of surcharge based on the British model.

Provincial Legislatures.—Subject to the views of our members in each Province, who have a particular knowledge of the conditions peculiar to their Province, and whose views will be put forward in oral evidence, we favour a grant of full responsible Government to the Provinces. We are, however, anxious that the undoubted risks accompanying such transfer of power should be minimised in so far as is, in our opinion, practical, and consider that, for the present, it would be wise to place the vital portion of Law and Order, that is the maintenance of Armed (or Military) Police, the Criminal Investigation Department, the Dacoity Department, under the Central Government. We also think it necessary to make such provisions as may be required to give contentment to the British element, which we believe must be maintained, under the changes in Government hereby

proposed. We therefore propose, should the transfer of power herein recommended be agreed to, that it should be made subject to the following safeguards: (1) The Establishment of Second Chambers; (2) All Bills passed by the Provincial Legislatures shall require the assent of the Governor-General-in-Council; (3) That existing instructions to the Governor-General and Governors regarding legislation discriminating against any particular section or interest should be continued, and supplemented by Statutory safeguards.

Ministry.—The Executive Council should be abolished, and replaced by a Ministry chosen from elected representatives. The power which a Governor now has to administer Transferred Subjects in the event of failure to form a Ministry, would need to be retained.

Franchise.—We do not at present recommend any widening of the franchise. The Education of the existing electorate in our opinion requires further time before any increase is justifiable. We, however, recommend a complete examination of the composition of Legislative Councils, and Council of State, with a view to ensuring adequate proportionate representation for the various interests in the Province. We are strongly of the opinion that Landed Interests and Commerce and Industry should be given increased representation.

[An analysis of the existing representations of these Interests is appended showing, for all India, a total of 38 seats for Landholders and 57 for Commerce and Industry out of a total number of 1,067 seats.]

We further strongly recommend a large proportionate representation for Agricultural, Ex-Military, and Labour interests, and the Depressed Classes.

Central Legislature.—We are generally of opinion that it is difficult to make any great advance in the Central Government until we are assured that the further transfer of power in the Provinces has justified itself. We are of opinion that the Legislative Assembly was wrongly constituted in the first instance, and that the existing system of direct election has not ensured that sense of responsibility between a Member and his constituents. This is in the main due to physical difficulties which could not be overcome without unduly enlarging the Membership of the Central Legislature, which we cannot recommend at the present stage of development. We, therefore, favour a system of indirect election by Provincial Legislatures, and duly formed and accredited Associations representing different sectional interests.

The Viceroy's Executive Council.—We are of opinion that no change in the Viceroy's Executive Council is desirable at the moment, but it appears to us that the system of selecting the Indian Members of the Council justifies examination. For instance, the existing Members of the Viceroy's Council to-day do not include any Member of the Indian Aristocracy, and we have known instances when of late certain individuals were quite unfit for such a responsible position. In all cases we contend that such appointments should be made from the best material available of any race or creed.

General Considerations.—If India's political development is to progress along sound lines, without undue risk of breakdown, we are strongly of the opinion that whatever changes are made in the Indian Constitution, it is essential to provide for the continuity of tradition and authority. The old order and the new must be reasonably blended, and we particularly direct the attention of your Commission to this point. It must be remembered that a large number of those individuals who have been in the past natural leaders have, for reasons which we need not enter into here, failed to adjust themselves to the changed system of Government, and they should be given every opportunity to take that share in Government which their contemporaries have in England.

Minorities.—All those who desire to see and encourage India's political development must regret communal and sectarian dissensions, which are such an obstacle to rapid progress. We are convinced that these dissensions are largely due to the fear of minorities that their interests will not be adequately safeguarded under a democratic form of government. It is the primary duty of all Governments to see that the legitimate interests of minorities are not trampled under foot, and we trust that a purely Indian Government would be no less careful of minority interests than any other national Government. As far as we are concerned, we strongly recommend the provision of statutory safeguards for all such interests, and we have no objection to these taking such form as minorities themselves may desire, provided always that the interests of the majority are not impinged upon, and that the national interests are not unduly subordinated.

Control of the British Parliament.—The Government of India Act already allows scope for the relaxation of the powers of the Secretary of State for India, and evidence of such relaxation is forthcoming in the convention which has been established regarding fiscal matters. Further conventions on similar lines might be built up, but otherwise we do not, for the moment, suggest any alterations to the existing Act, other than those necessitated by the grant of Responsible Government to the Provinces.

Education.—In our opinion the immediate need of the moment is a progressive policy in the training of Indians to fit them for the public service of India, and for training for the defence forces of India. We consider immediate steps should be taken to improve and increase educational facilities for this purpose.

Further, we are of opinion that much greater attention must be paid to Commercial and Technical Training. At the moment the very fact that a University Degree is required before entrance into the Government service has led to the University literary degree being considered as the goal of all education. This particular qualification for Government service should be done away with, and the Government Examination should be made a sufficiently high standard without this.

The obstacles which have to be surmounted in the introduction of a satisfactory system of primary education are considerable. The provision of teachers, even on the totally inadequate salary now paid, is beyond the resources of Provincial Revenues. Steps must, however, be taken to surmount this obstacle, even at the cost of increased taxation. Our experience leads us to believe that a more rapid growth of primary education can only be secured by compulsion, and this will have to be carried out area by area. We fully realise, however, that the conservative customs of the country will make the task of School Inspectors called upon to inquire about the absence of children one of extreme delicacy.

M. Raouf Fitza, the new Albanian Minister to Yugoslavia, arrived in Belgrade on November 27.

Every citizen of Constantinople must pay a poll-tax for the upkeep of highways or else give one day's labour by working on the roads. This year no fewer than 10,000 people have refused to pay the tax, and prefer to work in person.

INDIAN NOTES.

(Continued from page 667.)

Then there is the question of the personnel of the Court. The majority of the Judges would have to be Indians and Europeans with Indian experience at the Bar and on the Bench. In the matter of their selection consideration would have to be given to questions of politics, race, and creed. Any preponderance of one race or creed would be resented, more especially if the suggestion which is made by the Associated Chambers is accepted, namely, that it should be one of the functions of the Court to decide whether any legislation, or taxation, is or is not discriminatory. In this connexion it is important also to remember that the accumulated learning and experience of the Law Lords, which is the real source of strength of the Judicial Committee, would be lacking. Last year we came to the conclusion that a case for the establishment of a Supreme Court had not been made out. We now fully admit that under a federal Constitution the need would be greater. But, as we view the question, the difficulties in the way are still as formidable as they ever were, and this is also, we gather, the opinion of the Bombay High Court.

THE LONDON CYPRUS BROTHERHOOD.

A successful soirée was held at the Royal Hotel, London, on November 24, by the London Cyprus Brotherhood, which was formed at the beginning of the year, under the patronage of the Governor of Cyprus, Sir Ronald Storrs. The decorations of the ballroom included illuminated maps of Cyprus, interesting views of the Island, and a small display of Cyprus products. A feature of the evening that was much enjoyed was the exhibition of Cyprus dances which was given with special Cyprus music.

In the course of a speech during the evening, Dr. A. Zemenides, who founded the Brotherhood, gave a brief account of its activities; he said:—

... Although our Brotherhood's origin was very humble, our achievements have been considerable. We include among our members 600 Cypriots of all classes, doctors, professors, teachers, students, merchants, etc., but mostly workers in various trades; and our main object is to do all we can to assist them in improving their positions. We have already started a Day and Evening School for the teaching of English, where about 200 of them are receiving free instruction. We try to help our fellow-countrymen who have just arrived from Cyprus, as far as we can, in getting work. Of course, we look after them, should they sometimes happen to be in hospitals. In this way we offer help in a threefold form, and the benefits received by our members are evident and tangible. Generally speaking, we proceed on the principle of self-help, and, above all, there are no politics, no distinction of religion, or social and political beliefs in our Cyprus Brotherhood. There are still some difficulties in the working of our Society, but we are full of hope and confidence that with patience, persistence, wisdom and good will they will be overcome. We believe that our cause is a deserving one and our Institution of a benevolent character. Therefore we venture to advocate not only the maintenance of our Brotherhood but also its expansion. We are thinking of including honorary members as well, either for their interest, assistance or services rendered. I beg you to believe that the presence of so many distinguished guests to-night gives us great encouragement and it is also an incentive for the continuation of our endeavours.

It may be mentioned here that the entrance fee for the Brotherhood is 2s. 6d., and the weekly subscription 6d.

The Austrian branch of the Marconi Wireless Telegraph Company opened a direct service to Egypt on December 1.

Ejibili, chief of the Choka in Georgia, has been killed, together with another high Soviet official, in a motor-car accident.

Dr. Alij Ibrahim Bey, Professor of Surgery in the Egyptian University, has been made an Honorary Fellow of the Royal College of Surgeons, London.

THE WEEK AT HOME

London, Tuesday Morning.

The King's Health.

One topic remains on everybody's lips: How is the King? Recent days have scarcely lessened the anxiety which all classes feel for the health of their Sovereign, and the presumably inevitable ups and downs of the illness are followed with unconcealed hope or fear.

At the moment of writing the general feeling is one of immense relief that what was apparently a very critical period has been safely surmounted, but his loyal subjects will not feel happy again until they are assured that their King is well on the road to complete convalescence.

The Government and De-rating.

It seems to be quite generally agreed—even by gloomy opponents of the Government—that the Conservatives have added to their strength through the exposition in the House of Commons by Mr. Neville Chamberlain of the De-rating proposals. Quite obviously the Labour and Liberal parties were affected by his sincerity and by the comprehensive justice of his outlook.

The premature attempt to represent the measure as ill-conceived and implying inevitable injustices has, therefore, died down—at least for the time being. It is understood, however, that both Opposition Parties will bring fresh ammunition to bear on it—when they have manufactured it! But the least interested observers, having now had time to study the proposal, predict that De-rating will be an asset to the Conservatives.

The Liberals.

In a week or so, it seems, the Liberals will have 400 candidates in the field. Enthusiasm among those who follow the ringing lead of Sir Herbert Samuel is said to be enormous; nor is it true (so the official story goes) that the organiser of the Liberal Party did say about Mrs. Runciman's standing for Tavistock, despite her rebutting of Mr. Lloyd George at St. Ives, what he is stated to have said.

In other words, the Liberals are in fine fettle. De-rating and safeguarding are simply coining votes for them; the country will never have Socialism, and so on.

Indeed the only thing, apparently, that can stop a Liberal revival is the omission to cultivate the correct psychological attitude. It is, so the Liberal officials complain, the "will to win" that is lacking.

This is all very pathetic, for in the meantime the Conservative and Labour parties go on consolidating their position. The truth is—and it does not cease to become the truth be it repeated a thousand times—that while Mr. Lloyd George occupies his present position in the Liberal Party there is no future for that party. Pretence to the contrary is mere whistling to keep spirits up.

A Social Phenomenon.

The statistics relating to divorce last year are bound to create controversy upon the question whether Acts of Parliament make men and women moral or immoral, and whether the lack of them makes more for morality than for immorality. In any case, there appears to be in England a steady increase of divorce.

The figures which have just been published show that the number of matrimonial petitions filed in 1927 was 4,444, an increase of 662 over the preceding year.

The increase is apparently not due to the Judicial Proceedings (Regulation of Reports) Act of 1926, as is commonly imagined, but to the development of the Poor Person's procedure and the power to try at assizes.

Some heads will be shaken over this increase, while other people will welcome it as a sign of the enlightenment of our times. One cannot help thinking, however, that the type of mind which the latter people represent, however noisily and zealously, is a temporary phenomenon in our midst. More than one acute observer foretells a swing back in the direction of Puritanism when the present period of Paganism has outlived itself.

All-English Beer.

Few complaints are more general or more justified than the cry about the inferiority of the beer of to-day to that of former times. It almost seems, however, that England is once more to get beer that is beer.

For experiments have been made during the last few months of making English beer with nothing but English malting barley, hops, and sugar. For some years brewers have been asserting that foreign malt was the only possible malt, but even they, it appears, have had their prejudices broken by the astounding success of the "All-English beer."

Credit for this revolution must go to East Anglia, where the brewers have delighted the connoisseurs with the new product. I have not yet seen this peerless potation, but it appears to resemble old-fashioned English ale in flavour and general character. Not in potency, of course, for the relation of tax to gravity makes it necessary to keep it at a popular price. But if the campaign which is announced this week from Norwich, Ipswich, and other enlightened towns succeeds, it will not be long before London itself succumbs to this fascinating-sounding beverage. After three years it is that the Norfolk farmers have won their battle in favour of English barley for brewing beer.

The Test Match.

England's play in the first Test match against the Australians at Brisbane was told to us in lines that lightened the gloom of these end-o'-the-year days. Not the most fatuous optimist imagined anything half so good, so ingrained is the national habit of belittling Englishmen. As an off-set to things like rates and taxes and other pests that lurk in the neighbourhood of Christmas, nothing could have been better.

The intensity of the interest may be gauged by the fact that newspaper boys are allowed to invade the arrival platforms of our great railway termini to convey the cricket news. I do not remember this ever happening before.

PERSONAL AND GENERAL

TO-DAY

December 6, 1928 (New Style).

December 20, 1928 (Old Style).

Jumada II, 22, 1347 A.H. of the Muslim Calendar.

Kislev, 23, 5689, of the Jewish Calendar.

Sir Charles and Lady Nall-Cain will shortly leave Brocket Hall, Hatfield, for Egypt.

The Hon. Mrs. Adeane leaves London this week for Egypt, joining the s.s. Morea at Marseilles.

Ex-King George of Greece visited the Queen at Buckingham Palace on November 28.

Viscount Ikerrin left Marseilles on November 30 in the P. and O. liner Rawalpindi for Bombay.

Sir George and Lady Bettsworth Piggott left London last week for Cyprus and Egypt.

Sir John and Lady Chancellor left London on November 30 to join the P. and O. s.s. Rawalpindi at Marseilles on their way to Palestine.

Lord and Lady Manners left London on November 30 to join the s.s. Rawalpindi at Marseilles on their way to India.

Viscount Chetwynd and the Hon. Eve Chetwynd are expected to return to London at the end of February from India.

Major-General Sir Richard Bannatine-Allason left London on November 30 to join the Rawalpindi at Marseilles on his way to India.

The Maharaja of Nawanagar will leave London next week on his return to India, and the Maharo will remain in England until the beginning of January.

General the Right Hon. Sir John Maxwell and Lady Maxwell will leave London on December 21 for Egypt, where they will spend part of the winter.

Mr. T. S. Littler, of Ashton-in-Makerfield, near Warrington, has been appointed Lecturer in Physics at the Egyptian University, Cairo.

Major-General Sir John Davidson, M.P., Brigadier-General Sir Frederick Gascoigne, Sir Archibald and Lady Birkmyre, and Sir Trevredyn Wynne left London on November 30 by the P. and O. Bombay express, to join the s.s. Rawalpindi at Marseilles for Bombay. The Maharaja of Patiala and the Maharaja of Kashmir joined the s.s. Rawalpindi at Marseilles on November 30 on their return to India.

Captain D. McCallum will lecture to the Central Asian Society on December 12, at 5.15 p.m., on "Impressions of Indo-China." The lecture, which is to be illustrated, will be given in the Royal Society's Rooms, Burlington House, W. 1.

Lady Curzon has arranged to make an extensive tour in the East, leaving London probably on December 13. She is particularly anxious to see the old buildings restored in India and Afghanistan through the instrumentality of her late husband, Marquis Curzon of Kedleston.

The next two meetings of the Royal Asiatic Society are on December 11 and January 15, 1929, at 4.30 p.m., at 74, Grosvenor Street, W. 1. At the first, a paper will be read by Mr. Harold Bowen on "Notes on Early Muhammadan Titles"; and at the next a lecture, with lantern illustrations, will be delivered by Mr. D. Harcourt Kitchin on "The Baga Races of the Eastern Sudan."

The Maharaja of Burdwan, with the Senior Maharaj Kumari and his son Maharaj Kumar Abhay Chand Mahtab, is shortly returning to India, but the Maharaja expects to be back again in England in February.

NEWS IN BRIEF.

The Turkish newspapers appeared in Arabic characters for the last time on November 30. Latin type only is to be used in future.

The Turkish Minister of Finance has signed a contract for the establishment at Constantinople of a large workshop for the assembling of Ford motor-cars.

The Polish Government has invited the Roumanian Minister for Foreign Affairs, M. Mironescu, to pay an official visit to Warsaw in January, with a view to the establishment of personal contact with a leading member of the new Roumanian Cabinet.

Kechejizade Izzet Fuad Pasha, a former Senator of the Ottoman Empire, and at one time Ottoman Minister in Madrid and Under-Secretary for Foreign Affairs under the Grand Vizir Damad Ferid Pasha Bushati, died last week in Constantinople.

While standing his trial on a charge of having murdered Tsena Bey Kryeziu, Albanian Minister to Czechoslovakia, in Prague, on October 14, 1927, Algiviadh Bebi, an Albanian student, was shot dead in the Criminal Court there on November 30 by a servant of the murdered man's brother.

A deputation representing members of the Greek Orthodox Church resident in London have presented to Archbishop Davidson an address, accompanied by rare ecclesiastical needlework of the 17th century, made in Epirus. The address was read by the Greek Minister in London, M. Demetrius Caclamanos. Archbishop Davidson, in thanking the deputation for the gift and the address, expressed his sense of the importance of the friendship between the Church of England and the Orthodox Churches of the East.

An amended programme has been approved for the present cruise in the Persian Gulf, and subsequent movements, of H.M.S. Effingham, flagship of Vice-Admiral B. S. Thesiger. This shows that the cruiser will spend Christmas at Karachi instead of at Aden, as previously arranged. The Effingham arrived at Basrah on November 27 from Hanjam and Muscat. She is due to leave on December 13 to carry out the following programme:—Abadan, December 13-15; Sharja, December 17-18; Muscat, December 19-20; Karachi, December 22-January 5; Bombay, January 7-11; Ratnigri, January 12; Goa, January 13-14; Calicut, January 15; Androsth, January 16; Minicos, January 17; and Colombo, January 19.

The 16th anniversary of Albanian Independence was celebrated in Tirana on November 29 with unusual pomp and rejoicing, and the King received the good wishes not only of the Diplomatic Corps, but also from a large number of prominent Albanians. Signor Mussolini sent the following telegram to King Zogu:—"The festival of the independence of Albania has in the last year become in a solemn way also a festival and occasion of good wishes on the part of the Italian nation. Indeed, no nation can celebrate it better than ourselves, as we have proved the bitterness of servitude and the joy of redemption, and because we see in a free, strong, and allied Albania a sure promise of peace in the Balkans and of security in the Adriatic."

THE QURAN.

At a meeting of the Near and Middle East Association, held, by kind permission of Dowager Lady Boyle, at 64, Queen's Gate, on November 30, Professor D. S. Margoliouth delivered an address on "The Quran." Lord Meston of Agra, who presided, in remarking on the obligation incumbent upon Englishmen rightly to understand the Quran, quoted the famous passage in Gibbon (Chapter L.) concerning the teachings of the Prophet Muhammad. ("It is not the propagation, but the permanency of his religion, that deserves our wonder: the same pure and perfect impression which he engraved at Mecca and Medina is preserved, after the revolutions of twelve centuries, by the Indian, the African, and the Turkish proselytes of the Koran. . . .").

Professor Margoliouth began his brilliant address with an anecdote of the Bishop who set at rest the fears of one of his flock concerning the possible popularity of the Quran among English people. That the Quran was widely read, however, was proved by the translation of Sale, done in the eighteenth century, which was a national classic, and by the translations of Rodwell and of Palmer, both of which were standard works. Rodwell had already been reprinted, and Palmer was now in process of reprinting. The lecturer then gave (in order that he might not be thought unduly to underestimate the knowledge on the part of his audience of the Quran), three examples of ignorance of the Quran taken from the history of Muslims themselves. The first was at the time of Abu Bakr, the second at that of the second Abbasid Caliph, and the third example of ignorance was displayed by the Ottoman authorities in 1807. In all these instances reference was made to the Quran which had no justification in fact whatever.

Professor Margoliouth proceeded to make a striking examination of the Quran and of the Old Testament. Between these two Holy Books, he said, there were both resemblances and differences. Among the resemblances were a sublimity of language, a similar presentation (e.g., the introduction of a revealed passage with a phrase such as "Thus saith the Lord"), and a general classification of the respective contents into historical, legislative, devotional, and homiletic matter. Among the dissimilarities were the comparative lack of redundancy in the Old Testament (such repetitions as might be found in Isaiah and Kings II were rare), whereas if all redundancies were expurged from the Quran, it would be reduced possibly to one third of its present size; the fact that, whereas the Quran was accepted practically *in toto* as genuine, most of the Old Testament had at some time or other been disputed; and the unchronological basis of the Quran as compared with the more readily understandable order of the Old Testament.

The lecturer devoted some time to an explanation of how the Quran came into being, emphasising the fact that the Arabs made a habit of keeping the memory of sublime things "within their breasts," as well as, or in contradistinction to, committing such things to parchment. It was, incidentally, upon this examination of the drawing up and publishing of the Quran that Professor Margoliouth was, after his address, questioned by certain Muslims, who claimed that not only the whole of the Quran but also the order of the *Suras* were known to

Muslims before the death of the Prophet; to which questioning the lecturer gave the exceedingly adroit answer that the order in which the Angel Gabriel recited the Quran was undoubtedly the correct order! He also examined the problem of the "abrogation" of certain verses and the inconsistencies of the Quran, as exemplified in the twin injunction of both tolerance and intolerance towards unbelievers.

In concluding, Professor Margoliouth referred to the influence upon Islam of the Quran. On this, apart from mentioning his belief that a religion was to be judged by its interpretation at the hands of the choicest spirits of any particular age, he did not expatiate. He did, however, refer to the tremendous influence of the Quran upon the Arabic language. Alike in linguistic and philological matters the Quran held a unique place in Arabic literature, and to the loftiness of its language (he had previously described the fascinating rhythm of the Book) the lecturer paid a remarkable tribute.

After the lecture, Professor Margoliouth answered such questions as those relating to the status of women in the Quran (the male should have the portion of two females); to the number of wives allowed to Muslims (it might be four, or it might be the addition of the one, two, three, four mentioned, that is, ten); and to the state of Arabia before the advent of the Prophet, (reference was made by the lecturer to Bell's "Origin of Islam in its Christian Environment" and to the fact that little was certainly known—Mecca, even, was unknown before Muhammad, although various unsatisfactory attempts had been made to identify it).

This lecture was one replete with immense but lightly carried learning; and it was a happy reminiscence which Lord Meston, in moving a vote of thanks to Professor Margoliouth, indulged in of his undergraduate days at Oxford. Even then (nearly fifty years ago), he said, the lecturer had been credited with learning a new language each week, most of them bearing names unknown to irreverent undergraduates!

The following were among those who accepted invitations:—

The Bulgarian Minister and Mlle. Mischeff, the Persian Minister and the Counsellor and First Secretary of the Persian Legation, the Estonian Minister and Mme. Kallas, the Albanian Chargé d'Affaires and Mme. Vlora Bey, the Egyptian Chargé d'Affaires, the Hungarian Chargé d'Affaires, Général de Division and Mme. Després, Count Stanislas Los, Herr Karl Zeileissen, Orhan Halid Bey, Dr. Feine, Viscountess Dupplin, Lord Headley, the Hon. Lady White-Thomson, Sir Edward and Lady Boyle, Baroness de Knoop, the Baroness de Goldsmid, Lady Hewitt, Lady Tighe, the Hon. Lady Henniker-Heaton, Sir Henry and Lady Burt, Brigadier-General Charles de Winton, the Hon. Mrs. Spencer Graves, the Hon. Mrs. Edward Meade, the Hon. Katharine Thring, Major Arthur Bentinck, Captain and Mrs. E. N. Bennett, Mrs. L. Cobham, Colonel St. John Cooke, Mr. and Mrs. Philip Laszlo de Lombos, Dr. Ernest Griffin, Prebendary Gordon Ponsonby (Chancellor of Exeter Cathedral), Mr. Rhuvon Guest, Mrs. Charles Hancock, Mrs. Halahan, Mr. Bertram Thomas, Dr. Jal Pavry, Mrs. de Bunsen, and Mr. Roland Michell.

NEAR AND MIDDLE EAST ASSOCIATION.

Captain E. N. Bennett, J.P., will lecture to the Near and Middle East Association on December 13, at 8.45 p.m., upon "The Island of Crete: Its Past and Present." The meeting, over which Lady Newnes will preside, will be held, by kind permission of Miss Spalding and Mlle. Griboval, at 133, Queen's Gate, S.W.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Book Reviews

THE MACEDONIAN CONQUEST.

"**MACEDONIAN IMPERIALISM AND THE HELLENISATION OF THE EAST.**" Illustrated. By Professor Pierre Jouguet. (London: Kegan Paul, Trench, Trubner & Co. 21s. net)

Here we have another volume of much value in "The History of Civilisation" series. Like the recent volume on Egypt by Professor Moret which we discussed lately, it is of French origin and has the clarity of exposition which seems to be a special gift of our neighbours, while, like most of the books in this series, it is capably translated. If it has a fault, it lies in its somewhat narrow conception of "Hellenisation." We should have liked to have heard more of the effect of the spread of Greek influence on art, literature and philosophy. It may well be, however, that this aspect is being or has been dealt with by other writers in one or other of these volumes.

We have a sketch of Alexander's career and conquests which, though necessarily lacking in detail, contrives to bring out all the essential facts and their relation to one another. This is followed by a similar sketch of the times of his successors and finally of the rule of the Lagids, Seleucids, and the later supplanting of the latter in Asia Minor. This part is, of course, still more difficult to compress without loss of clarity, and it is greatly to the author's credit that he has succeeded in giving us a clear, accurate and consecutive narrative which can be read with real enjoyment.

The effect of this huge enlargement of the Greek horizon is studied with reference to the Greeks themselves and to the people who thus came under Greek influence. Both sides of the question are gone into in chapters of great interest. In these discussions the author has carefully guarded himself from speculations going beyond what little knowledge has actually come down to us and has taken pains to make clear how very inadequate such sources are with regard to Asia. In Egypt we have now been put into possession of much priceless information from such unexpected places as rubbish heaps and the layers of papyrus used to make up mummy-cases, and we may reasonably expect that further light will become available from such sources. As it is, we are constantly being confronted by vexing gaps. These Professor Jouguet makes no attempt to conceal after the manner of many popular writers, but he has studied what material is available to such good purpose that he is able, as regards Egypt at least, to give us a very vivid picture of the administration of the country by her Hellenic rulers.

A quotation giving part of his comparison of the Seleucid and Lagid Empires will, perhaps, best give a taste of the quality of the book. The Seleucid, he says,

was an immense, heterogeneous Empire. No Hellenistic monarchy presents such a variety of countries or such a motley patchwork of peoples. Next to Egypt, the Seleucid Empire embraced the most ancient and glorious centres of human civilisation—Babylon, Susa, Jerusalem. It contained the ruins of Troy and the ruins of Nineveh. It was the strange common home of the most diverse forms of poetical and religious inspiration; the Psalms of David, the preaching of Zoroaster, and the epic of Homer were born under that radiant sky. The glory of Chaldea belonged to it, and that of Ionia. In it a swarm of individual dominions lived again—merchant kingdoms, empires of warriors, and priestly States, the Lydia of Croesus, the Media of Cyaxares, and the Judea of Solomon—but also the first universal dominion which had absorbed all the others—that of the Achæmenids. That fell to it with the inheritance of Alexander. Through the victor of Arbela, it continued the tradition of Darius and Cyrus. In so complex a world, the task of government was never easy, and it was perhaps harder for the Seleucids than for their fore-runners. . . . The Seleucids were strangers in Asia. Alexander might hope to rule the East and the whole world by supporting himself on the Macedonian nation, whose country of origin was incorporated in his Empire. But Macedonia did not belong to the Seleucids. It was a reservoir of men and strength on which they could not draw for ever. All these Græco-Oriental monarchies lacked a national foundation. . . . The position of the Lagids was certainly much more favourable. Although strangers in Egypt—quite as much as the Seleucids in Asia—they had to deal with only one nation, whose soul was concentrated in the person of a god-king. With this god-king they were able to assimilate themselves by the second or

third generation, by means of a skilful policy seconded by a powerful bureaucracy and the traditions of a people accustomed to obedience."

We think that Professor Jouguet is inclined to overrate the difficulty of combining the Greeks, with their passion for free city-states, with the native subjects of these Empires. It has surely to be remembered that many of the Hellenic immigrants were, as a matter of fact, not citizens of Greek city-states, but Macedonians and other inhabitants of the north of the Hellenic country who had long been accustomed to the rule of monarchs. But the book well brings out how these great Empires, both by the exhaustion of the Hellenic centres and by their own loose hold on the inhabitants of their provinces, made the way easy for the advance of the Roman Empire, while, at the same time, providing it with foundations for the building of the new edifice. The period is one of great importance and the ordinary reader knows far too little of it. He cannot do better than remedy this defect by studying this interesting and capable work.

C. S-W.

ISLAM.

"**THE ISLAMIC FAITH.**" By Sir Thomas Arnold (London: Benn's Sixpenny Library)

This little work by Sir Thomas Arnold is perhaps the most wonderful compression which we have ever seen. It is indeed a miracle of proportion and judgment which this great Orientalist has wrought in presenting, within fewer than eighty small pages, a perfectly definite, comprehensive, and, of course, accurate survey of what the Islamic Faith signifies. Nor is the quite dispassionate tone in which the rival sects of Islam are dealt with the least of the charms and merits of the work, which should be read by everyone who professes interest in the British Empire and by many besides.

Sir Thomas examines first the Creed of Islam, the creed the two implications of which are that "God is One and Unique in His essence," and that the Prophet Muhammad was sent "to proclaim anew the primitive revelation." And he makes the familiar point, which, however, can never receive too much emphasis: that Islam, not Muhammadanism, is the religion of the Muslims—for Muhammad was not the founder of Islam. He then passes to the Quran itself, laying stress on its ethical contents. Next comes an invaluable chapter on Islamic theology, that very knotty subject in which politics and religion were closely mixed.

In the sections devoted to "Good Works," "Church and State," and "Islam as a Missionary Religion," even professed students of Islam will find much stimulating matter. It is, however, when Sir Thomas approaches the subject of Asceticism and Mysticism, that he is giving the greatest opportunity for displaying his amazing learning. The book closes with an admirable discussion of the Sects

THE CAMBRIDGE ANCIENT HISTORY

VOLUME VII. The Hellenistic Monarchies and
The Rise of Rome.

Edited by

S. A. COOK, Litt.D., F. E. ADCOCK,
M.A., and M. P. CHARLESWORTH, M.A.

With maps, tables and plans.

Royal 8vo. 37s 6d net.

This volume begins the Roman section of the History; it traces the rise of Rome from its foundation to about 215 B.C.

CAMBRIDGE UNIVERSITY PRESS
Fetter Lane, London, E.C.4

of Islam, and here again the broadmindedness of the author is prominent, particularly in connexion with the "modernist" movements in Turkey and in India.

If one were at all to criticise, it would be to suggest that where certain "revolutionary" acts are taking place in Islamic countries Sir Thomas appears to be inclined to ascribe their motive-force to Islamic thinkers, whose doctrines may happen more or less to coincide with the tenets and deeds of much more rough-and-ready advocates of modernism. In other words, the secularisation of Islam is given, so to speak, a philosophical basis the responsibility of which may appeal more to the literary student than to the practical observer of events. Because "revolutionary" events in Muslim countries can be explained by reference to the works of Islamic authors, it does not follow that they are so to be explained. This, however, is a mere suggestion, which concerns only one of the numerous points in a book which is deserving of the highest praise.

◆ ◆ ◆ "MASSIS."

We have received the first number of *Massis*, a monthly organ devoted, as its name implies, to Armenian interests. It is being edited by Mr. A. Safrastian and is published in London (84, Bernard Street, W.C.1). The annual subscription is twelve shillings.

The word *Massis*, as the Editor points out, is the national Armenian word for Mount Ararat; *Ararat* is never used "except in connexion with the Biblical tradition and ancient records of Assyria."

The object of the journal is to review the activities of the Armenian people both in their homeland and in the Diaspora: it should, therefore, obtain a considerable circulation outside London and Manchester. In this first number are contained articles upon the progress of the Armenian homeland under the Russian ægis (it is claimed that 90 per cent. of the Armenian people who are scattered would settle in Russian Armenia if it were feasible); upon the Armenian refugees in Syria (this points out clearly the difficulties arising from the French scheme in Syria in regard to the aspirations of the Syrian Nationalists); and on news and books and congresses connected with Armenia. A particularly useful summary is devoted to the treatment of Armenian subjects at the recent International Orientalist Congress at Oxford.

◆ ◆ ◆ MUSLIM RELIGIOUS ART.

Sir Thomas Arnold gave last week, before the British Academy, the concluding lecture of this year's Schweich Lectures on "The Old and New Testament in Muslim Religious Art." He put forward the evidence for deriving the beginning of Muslim religious art, which made its first appearance at the beginning of the 14th century, from the art of the Oriental Churches—particularly the Jacobite and Nestorian Churches. He laid emphasis on the destiny of the Christian population living under Muslim rule in Mesopotamia and Persia, and on the intimate relations of the Nestorians with their Muslim neighbours; and gave examples to show that similar artistic conventions are found in Christian and Muslim manuscripts of the 13th and 14th centuries. As the Muslim theologians were hostile to all forms of representational art, and consequently no school of religious painting could spring up spontaneously in an Islamic society, such Muslims as cared to disregard the teaching of their religious guides and wished to possess religious pictures had to employ Christians or other painters who carried on the tradition of Christian art. Examples were given of such transference of Christian forms of representation of sacred subjects, such as the Annunciation, and so forth, to Muslim religious pictures. In succeeding centuries Muslim artists became more independent and devised methods of their own for the representation of their religious history, and illustrations were given of Persian and Indian pictures of the Prophets of the Old Testament and of the life of Jesus and of the Virgin Mary.

THE PERSIAN COURT ARTIST.

An exhibition which will certainly interest all students of Oriental art is now being held at the Leicester Galleries, Leicester Square, where M. Paul Mak is showing some of his beautifully decorative work. These pictures are in effect the manifestation of a Western, or semi-Western mind at work through an Eastern medium.

The story of M. Mak is a romantic one. He was born near Moscow in 1890, of a noble Russian family. Like that of many Russians of the old régime, his youth was spent in both artistic and military training. He was wounded several times in the Great War, and was actually in hospital when the Bolsheviks came to power. As a matter of fact, it was only his artistic ability which saved him from death in the Boutirka prison. He happened to make a sketch of the Governor of the prison, who was so struck by it that he arranged the pardon of the bourgeois prisoner. But M. Mak was obliged to stay in Russia until 1921.

Then, however, he managed to escape into Persia. In Persia, having arrived quite penniless, he resolutely set himself to the study of Persian art. This he achieved with such success that certain Court officials of the Shah Riza Pahlavi came to know of his talents. He was commissioned to paint a huge portrait of the Shah (measuring fourteen metres), and afterwards was appointed official artist to the Court at Teheran.

As we have said, M. Mak, who has a marvellous facility in design and in detail, works primarily on the Oriental conventions, but Occidental observers will at once notice certain similarities to the works of men like Beardsley or Lindsay. If M. Mak has not seen the works of these men, it only shows how similar results may be achieved by the following of separate roads.

Some of these drawings are direct, other are allegorical representations. Possibly the allegorical, or purely decorative, are the finest. In these he takes some episode in the history of the Persians, real or legendary, and illustrates it with various pictures all contained within the highly decorative frame of the one picture. To this category "Invasion of Tamerlane," and "Leila and Majnun" belong. But there is much besides, in his studies of dervishes, death, dreams, hashish, Persian beggars, and so forth, that will delight the student of the legends and history of the East.

The appearance of M. Mak is a most stimulating phenomenon. For no one, probably, is so well situated as the Russians creatively to interpret to the West the art, whether Music or Painting, of the East. One remembers the Oriental background of such composers as Borodine, Balakireff, Rimsky-Korsakoff, and so on, as one remembers the largely Oriental background of such a painter as Roerich. But no one, perhaps, has adhered as closely to the Oriental medium as has M. Mak. We advise British students of Eastern art, therefore, to visit this exhibition. They may find a fault or two, such as a certain weakness in actual drawing—that is, if their standard be perfection. But that they will be highly stimulated we have no doubt. Pattern for pattern's sake, detail for detail's sake, colour for colour's sake, finesse for the sake of finesse—all these essentially Oriental indulgences are here in abundance. The originality of the Slav is most happily combined with the traditions of the art of the Shials.

The Bishop of the Church of England in Jerusalem (Dr. MacInnes) on November 18 installed, at the Collegiate Church of St. George the Martyr, Jerusalem, the Rev. Harold Jocelyn Buxton as Archdeacon of the Church of England in Cyprus and the Rev. Weston Henry Stewart as Archdeacon of the Church of England in Palestine and Syria.

The Turkish Grand National Assembly at Angora on November 30 ratified unanimously the Turco-Italian Treaty of Neutrality and Conciliation, together with a Convention dealing with judicial matters. The Assembly also ratified the Treaty of Friendship and Co-operation with Afghanistan and a supplementary Protocol to the Turco-Persian Treaty.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Mining Law.

That the new Roumanian Administration intends to waste no time in carrying into effect their policy as laid down at the meeting of the "Parliament" of the National-Peasant Party held last summer will be clear from the statement of the Minister of Industry and Commerce, M. Madgearu, to a delegation representative of the oil industry of Roumania that he has prepared a Bill for a reform of the Mining Law. This law, which may be said to have exemplified the policy of the Bratianu régime, had the effect in practice of preventing the further development of the oilfields, and naturally in the circumstances met with general opposition on the part of the oil industry. The Bill, which M. Madgearu proposes to introduce, will provide that henceforward foreign capital shall be on an equal footing with Roumanian capital, and is further to secure the free development of oil production. The delegation put forward various other points to the Minister who showed from his reply his keen desire to conciliate the industry. Thus he promised that a reduction of transport charges would be considered, that the royalties question would be settled within a fortnight, that communal taxation should be revised, and that the roads leading to the oil districts should be repaired. On one point only, and that an important one, was he unable to give the delegation satisfaction, and that was in respect of the export taxes on oil products, which he explained could not be lowered as they entered into the Budget. One assumes that in this case M. Madgearu was speaking for the Finance Minister, and in view of Roumania's financial position, it need occasion no surprise that the Maniu Administration should find it impossible in the first year of office to reduce these taxes. It may no doubt be taken for granted that as soon as finances admit the question of the reduction of these taxes will come up for consideration.

A Cotton Substitute.

In the days of artificial substitutes for common commodities it was only to be expected that sooner or later the monopoly enjoyed by cotton would be challenged. In recent years various attempts have been made, as a matter of fact, to launch a substitute for cotton without success, but the latest development promises to have a different fate. Next year "Artificial Cotton," to give it the name by which it is known, although it is neither artificial nor cotton, is to be placed on the market by the English Artificial Cotton Production and Marketing Company. The available facts regarding this product may be shortly summarised. A plant which was found to yield a material resembling cotton was discovered in British Guiana, and plants and seed were brought to England, and the artificial cotton is now being grown in certain areas in Essex and Sussex. The plant can be grown on ground suitable for little else, which is obviously a very strong point in its favour, and the resultant product is understood to be similar to coarse cotton with a staple of an inch. The yield is stated to be between 800 and 900 lb. per acre, and it is understood that a crop of between three and four

million pounds will be available next summer for spinners at sixpence per lb, a price which is rendered possible by the production of various by-products from the plant.

High Yielding Crop.

From the figures available, which I have quoted above, it is possible to make some interesting comparisons. A yield of 800 to 900 lb. per acre is roughly equivalent to one of 8 or 9 kantars per feddan which happens to be just double the present average yield of cotton in Egypt. Then a crop of three to four million pounds is approximately equal to 7,500 to 10,000 bales on the rough and ready calculation of four kantars to the bale. This number of bales is not very imposing, when viewed in relation to the world's cotton crop, but it must be remembered that next year's will be the first marketed crop in England, that the product has to prove itself to the industry, and that a rapid rate of expansion may be possible. This would seem to depend very largely indeed on an adequate supply of land being available. To produce even half a million bales, which represents less than one-fortieth of the cotton crop of some years, would require from 250,000 to 300,000 acres, which is a large amount in a country where the total arable acreage (to take the 1926 figures) is no more than 9,873,000 acres. That is not to say that sufficient land cannot be obtained, though England stands in a very different category from an undeveloped country, and the problem is clearly simplified by the fact that the plant will grow on ground unsuitable for other crops.

Orange Growing in Palestine.

The estimate for the export of oranges from Palestine for the current season is about 2,000,000 cases, which is very much the same as the total for the two previous seasons. The area under orange groves is being steadily extended, and it is anticipated that by the end of the present year it will amount to about 16,500 acres as compared with 10,000 acres at the end of 1926. It is estimated that an area of approximately 53,500 acres is still available for the growing of citrus fruits, so it will be realised that the limits of the expansion of Palestine's staple industry are far from being reached. It is obvious that in the present position of Palestine the soundest policy is to concentrate on an industry which has served the country so well in the past, and it is satisfactory to know that this is being done, for the growing popularity of the Jaffa in the world markets is a sure guarantee that further expansion can be safely undertaken.

Turkish Coal Competition.

The fact that Turkey has obtained a second contract for the supply of coal to the Athens Gas Works suggests very forcibly that Turkish competition in the Mediterranean coal market is not going to be the flash in the pan that it was thought likely would be the case. The contract is for 12,000 tons at a price of 17s. 6d. per ton c.i.f. Piræus, and it is understood that this is at least 7s. below the price at which Durham coal was tendered. It may help to bring home the impossibility of competing on these terms if I mention that in pre-War days Durham coal for delivery at the pithead was about 8s. per ton, and we have moved along since 1914 in respect of such important matters as freight charges, etc. That Turkish coal is vastly inferior to the Durham product apparently does not weigh with the Greeks.

The Greek Carpet Industry.

Before the arrival in Greece of the refugees from Asia Minor the Greek carpet industry was of trifling dimensions, but in the next few years it underwent a rapid development. Thus while in 1924 there were 30 carpet factories in Greece with 950 looms, in 1925 there were 70 with 2,500 looms and 6,500 workers. The production in 1926 amounted to 50,000 sq. metres as compared with 120,000 sq. metres for 1925, while for 1927 the production was 180,000 sq. metres valued at £500,000. Side by side with this growth in production there has been, until the present year, a steady expansion of the export trade. Thus while the export of carpets in 1924 totalled 60,000 sq. metres, it rose to 80,000 sq. metres in 1925 and to 90,000 sq. metres in 1927. For the present year, however, the total is expected to be only slightly above the figures for 1924, for which development various explanations are advanced such as the shortage of workers, numbers of whom have been attracted from the industry by the prospect of higher wages in France or elsewhere. Other important factors in the present depression in the industry are the competition of other countries and the fact that Greece has to import raw materials. It is not without significance that the figures for the export of Turkish carpets and rugs for 1925 to 1927 showed a steady upward progression. For 1925 the figures were 3,995,994 kilos (1 kilo equals 2,2046 lb.), for 1926 4,709,311 kilos, and for 1927 5,344,328 kilos. These figures suggest that the efforts to revive the industry, following the loss of Greek and Armenian workers are having a considerable measure of success, and it seems probably that here is to be found one of the chief causes of the decline in the Greek trade.

COMMENTATOR.

RAINS IN SYRIA.

A Mersina Correspondent writes under date November 24: "The rainy season has come at last after five months of drought. It rains at night, and keeps fine during the day so that people can go to their work. Unfortunately the streets are rivers of mud and water, especially those by the sea. The Mayor sent men yesterday afternoon to drain off the water and fill in the low lying ground. In Tarsus and Adana it is worse than it is here, and motor cars stick in the mud. Yesterday we were without electric light owing to a short circuit. Snow has already appeared at our mountain summer resort, Guzna, and there is a cold wind. I hear that it is possible that from January next Sunday is to be the closing day instead of Friday.

The Bank of Greece has reduced its re-discount rate from 10 to 9 per cent.

The Yugoslav Budget estimates show an expenditure of 11,954 million dinars, as compared with 11,580 millions for 1928-29.

During October 4,010 tons of locust beans were exported from Cyprus, reducing the present stock of locust beans in the Island to 31,846 tons, including 370 tons of the 1927 crop.

JAFFA ORANGE EXPORTS.

Cabled information from the Empire Marketing Board's correspondent at Jaffa reports stormy weather, with rain-fall, from November 21 to 24, and no sailings that week. Shipments recommenced on the 25th inst. with the Ingrid-sturm carrying 25,000 boxes to Hull and Newcastle. Total shipments up to November 25 amounted to 123,000 boxes, as compared with 162,000 boxes at the corresponding date last year.

Transhipments in the present season have amounted to approximately 30,000 boxes, and 35,250 boxes had been dispatched by rail via Kantara up to November 17. The majority of the rail transit fruit is destined for this country, but small quantities are consigned to other European countries, the Far East, etc.

THE SALONIKA FREE ZONE.

The trade in merchandise in the Free Zone of Salonika, which has always been fairly active, has developed considerably during this year. For the first ten months the imports amounted to 331,799, while the total for the exports was 335,955 tons. It is interesting to note that Great Britain is easily first among the countries from which goods were imported. The figures for the principal countries concerned in the trade are as follows:—

	Imports from.		Exports to.	
	Tons.		Tons.	
Great Britain	67,972	...	560	...
United States	47,727	...	341	...
Yugoslavia	24,311	...	14,016	...
Belgium	24,240	...	2,141	...
Russia	23,758	...	65	...
Roumania	23,663	...	21	...
Canada	19,048	...	—	...
Italy	15,277	...	426	...
Argentina	15,233	...	—	...
Turkey in Asia	12,455	...	43	...
France	10,929	...	3,841	...
Egypt	10,624	...	1,362	...

The Turkish Ministry of Education has issued an order that all schoolmistresses must wear hats when off duty. When on duty they must be bareheaded.

A Turkish Military Mission consisting of 10 senior officers under Kiazim Pasha, sub-Chief of the General Staff, left Turkey on December 2 for Afghanistan, where they will act as instructors to the Afghan army.

It is stated from Athens that Captain Hurley, the Australian airman, whose machine made a forced landing near Tatoi, has been admitted to hospital, suffering from a slight wound in the head. He is making satisfactory progress. The aeroplane, the Spirit of Australia, is so badly damaged that she will not be able to continue the flight.

Irrigation in Egypt

LOWER EGYPT.

Historical Note.

At the time of the conquest of Egypt by the Arabs the whole of Lower Egypt was irrigated on the basin system, that is by flooding large areas of land enclosed by earthen banks. The country was then populous and flourishing, as the numerous ruins of towns and villages spread throughout the marshes and waste lands in the far north of the Delta still testify. When the great Mohamed Aly became ruler of Egypt in the year 1811 the basin system was limited to the zone lying south of a line running roughly 40 miles south of the sea coast. North of this line, i.e., outside the basin zone, the water flowed into the seaboard lakes and on into the sea itself. This was the case during the flood season in August, September, and October, but during the months of low supply the water of the Nile entered only a few canals, and the cultivated area was insignificant, being limited to gardens, vegetables, a small quantity of cotton, rice and sesame.

Mohamed Aly, in his desire to develop the wealth of the country, rightly directed his attention to the Nile, and he ordered the deepening of the canals and the clearance of their inlets, so that they might draw water from the river during the low summer stage and thus enable the areas already cultivated to be extended. The clearance work was extremely difficult, and had to be repeated every year after flood. As at that time the population of Egypt did not exceed two millions, the recruitment of labour for the annual silt clearance from canals of about fifteen million cubic metres was a severe burden on the inhabitants, especially as they were compelled to work under the "Corvée" or forced labour system. It was clear, therefore, that the problem of an adequate water supply called for a more comprehensive solution, if the increase of cultivation and the general prosperity of the country were desired.

Mohamed Aly Pasha, resolving to subdue the Nile as he had subdued the whole country, ordered in 1833 the closing of the Rosetta Branch of the Nile with a stone bar, so as to divert all the water into the Damietta Branch and thence into the numerous canals fed from it, but which had not been completely cleared. Linant Pasha, the engineer who was then in the service of the ruler of Egypt, explained to the latter the great danger that must result from the execution of his order to close the Rosetta Branch, as it would deprive Alexandria and the Behera Province of water and expose Cairo to inundation in flood time.

From this incident arose the idea of constructing on the two branches of the Nile, barrages provided with sluices and gates, for the regulation of the supply of water to the three main irrigation canals, which had their off-takes upstream from the barrages.

Mohamed Aly Pasha did not wait for his engineer to prepare the designs and drawings for this project, but asked him to estimate the amount of material required for this great work so that it might be transported to the site, and a beginning was at once made with the digging of the foundations, the building of workshops and the transport of plant to the site.

Linant's scheme was to construct the Damietta Branch Barrage in the cultivated land near Darawa and that of the Rosetta Branch near the village of Kafr Mansour, then to divert the river to the two Barrages. For various reasons his project was first neglected and then abandoned; the materials and even workshops were pulled down and removed.

In the year 1848, Mogel Bey, a French engineer, came to Egypt and again pointed out to Mohamed Aly the advantages of building the barrages at their present site at the bifurcation of the Nile. He amalgamated the idea of building these barrages with that of transforming the

surroundings into fortifications and fortresses to command the Nile with its two branches; thus converting this region into one of strategical importance for Egypt.

The Viceroy was delighted with this idea, which coincided with his military aspirations. He approved the project, and ordered the work to be begun immediately. It was carried on with great energy until the time of his death, but in 1853 his successor Abbas Pasha, who considered that the work was not being executed with sufficient dispatch, dismissed Mogel Bey and entrusted the work of completing the barrages to Mazhar Bey, who actually finished them in 1861.

It will thus be seen that it was Mohamed Aly Pasha, the grandfather of King Fuad, who first suggested and secured summer irrigation for Lower Egypt, by building the Delta Barrages at the site where the river bifurcates just north of Cairo. By this means cultivators are able to obtain two, and even three, crops a year in the place of one under the basin irrigation.

It is true that the Barrages did not at first fulfil the purpose for which they had been constructed, owing to the difficulty experienced in those days in laying the foundations of such structures. Two pumping stations had subsequently to be erected on the Western Branch of the Nile at Khataba and Atf to supply water to Behera Province and Alexandria, and it was intended to extend this system of pumping stations so as to obviate the difficulty of clearing the beds of those canals which were too high to draw summer water.

In the year 1863, there was a shortage of water in the Damietta Branch. To improve matters the Rosetta Barrage was closed, with the result that the sand beneath the floor was forced out in places and ominous cracks appeared. Later in 1867, a section of this Barrage separated from the main portion of the work. The whole work was condemned and was not used again until 1884 after the arrival of Sir Colin (then Colonel) Scott Moncrieff from India. After various tests to prove that the Barrages were capable of being repaired, the work was put in hand and as a result it was possible to increase the height of the structure by one metre in that year. Permanent restoration and strengthening were decided upon, and work was begun in 1886.

Briefly, it consisted in lengthening the masonry floor on the upstream with a new line of sheet piling 16 feet deep across the whole river at the end of this new masonry, repairing and strengthening the old floor, and adding a masonry extension to the downstream side of the floor. As the result of this work the Barrages were capable of holding 4 metres head of water.

In 1891 springs spread in certain sections of the end of the floor. Various expedients were tried to remedy the defect, including stock ramming with clay, but to no purpose. Finally cement grout was employed with marked success. Bore holes were bored through the piers to the bottom of the foundations; liquid cement was poured in from the road level, being forced by pressure into all the interstices.

In 1898, two weirs, one downstream Rosetta Branch and the other downstream Damietta Branch, were built and provided with navigable openings for the purpose of decreasing the head on the barrages. The work on these two weirs was completed in 1901, and henceforth it was possible to raise the water upstream the Barrage during summer some six metres above its natural level, and to divert to the canals the whole flow of the river in summer. Even so the demands for irrigation of the large areas lying between the two branches of the Nile and the sea and those east of the Damietta Branch could not be satisfied by the canals serving them.

A second barrage was projected at Zifta lower down the Damietta (Eastern) branch of the river. This was built in 1903. Two subsidiary canals, the Mansouria and Abbasi, were constructed to irrigate the province of

Dakahlia and part of Gharbia when the main feeder canals from above the Delta Barrage are unable to carry the very large quantities of water required in the early stages of the flood season and at various times for winter crops.

Now, owing to the completion of these works, and at the same time to the construction of the Aswan Reservoir, which since its completion in 1902 has stored water during winter, so as to increase the natural river discharge in summer, the summer cultivation in Lower Egypt has risen to no less than 1,400,000 acres, and the canals served by the Barrage carry up to 70 million tons of water daily. During summer and until the arrival of the flood nearly three quarters of the water discharge of the Nile are used in the irrigation of the Delta, where most of it is devoted to the watering of long-staple cotton, on which the prosperity of Egypt depends.

In summer the Barrages are tightly closed, so that all the available water may be forced into the main canals of the Delta which radiate from this point. In autumn the Barrages are opened to allow the muddy water to pass down the river branches to the sea, the sluices being operated so as to retain only that fraction of the total flood which can be utilised for irrigation at this season.

The summer discharge of the Nile, augmented by the release of stored water from Aswan Reservoir, is divided carefully between the various canals according to the area of cultivation dependent on each. If we take, for example, the main canal which serves the Central Delta, the land between the two Nile branches, we shall find that its share of summer water is only about fifteen million tons per day, or roughly twenty tons for every acre of standing crop, mostly cotton, on the ground at that season. To water an acre needs about four hundred tons, so each field may be irrigated once in twenty days with this supply. At intervals of ten or fifteen miles the main

canal is spanned by a Regulator, that is by a weir with adjustable sluices like a barrage in miniature, and used in the same way to raise the water level and force the required discharge into the heads of branch canals, each serving from twenty to one hundred thousand acres of land. These branch canals in their turn feed smaller branches, called Distributaries, each serving from one to ten thousand acres.

The last stage of distribution controlled by Government is the passage of the water from the Distributary into the private irrigation ditches of the farmers, through Outlet Culverts designed to give to each his fair share according to the area of land which he cultivates. The smaller culverts consist of simple pipes laid under the canal bank, but no engineering work in the land is so important in the eyes of the peasant as his pipe outlet. The reason for restriction is that during part at least of every summer demand exceeds supply, and irrigation water has to be carefully rationed to its users. The method of distribution then adopted is irrigation by rotation. All the distributary canals are divided into three big groups, serving in the aggregate approximately equal areas. To each group water is given for a definite period, usually six or seven days, the canals of the other two groups being meanwhile closed, and the total supply is thus concentrated on one third of the total area. The arrangement of groups and periods is widely advertised beforehand, so that everyone concerned may know when to expect water to be available in that particular canal which serves his land. This system is thoroughly understood and generally appreciated.

In times of scarcity, when the low stage discharge of the Nile is below normal, there is not enough water to fill even one third of the canals up to their full supply level, and water has to be lifted on to the land. At such seasons hundreds of centrifugal pumps, steam or motor driven, thousands of Persian wheels turned by bullocks and of Archimedian screws worked by hand, are kept going all day and most of the summer night. Each farmer is anxious to finish watering his field before the ending of the rotation period stops further irrigation for twelve or fourteen days.

The amount of energy devoted to lifting irrigation water in Egypt is colossal; the practice is obviously wasteful, but there are compensations. One can be quite sure that lifted water is economically used. The peasant will guide it most carefully along the furrows between the rows of growing cotton, whereas he may be tempted to adopt more wholesale methods in the application of water which can be drawn by gravitation from a canal without expenditure of money or energy on his part. Cotton is the all important summer crop of the Delta, and many experts think that it is more liable to be damaged by too much than by too little irrigation water. In any case millions of pounds would have to be spent on conservation works up the river, and large sums on perfecting the distribution system, from the main canal to the pipe outlet, before lift irrigation in summer could be entirely dispensed with.

(To be continued.)

Mr. James McMurray, C.B.E., late chief manager in Persia, has joined the Board of the Imperial Bank of Persia.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 10 amounted to £E14,837, making the total from April 1 £E187,911.

The numbers are announced of 654 Four per Cent. Egyptian Government Irrigation Trust Certificates which have been drawn for redemption on January 1.

Mr. Leslie Cooper, the general manager of the Bank of British West Africa, has been elected chairman of the Committee of the British Overseas Banks' Association for the ensuing year.

The Standing Committee of the Board of Trade, appointed under the Merchandise Marks Act, in their report issued last week recommend that foreign-made carpets, carpeting, floor rugs, floor mats, and matting, made wholly or mainly of textile materials, including felt or paper, should bear a label indicating their country of origin.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent
on application to
the Secretary*

Engineering Topics

By G. B. B.

Boring.

The paper on the new borehole outfit which was read before the Society of Engineers by Mr. F. H. Mackintosh, was of more than usual interest, and it would seem that the invention should prove to be one of the most valuable advances made in connexion with civil and mining engineering for some time. Broadly speaking, it is a tool which enables anyone to make his own boreholes unaided and at a moment's notice. The engineers for preliminary investigation into a contract, the prospector miles away from civilised parts, where weight has to be reduced to a minimum, and even the geologist to whom only the academic side of this science appeals, will surely welcome this instrument which renders them independent of professional drillers and their plant. The principle of the new tool lies in the property inherent in clays and similar substances, of flowing laterally under pressure. The tool makes a hole about one inch in diameter, but as this is made solely by displacing the material, no debris is brought to the surface, consequently no disfiguring spoil heaps mark the sites of boreholes. The speed with which the tool can be used is surprising, as twenty or more boreholes, each of about 30 feet in depth, can be made in a day's work at no further cost than that of the operator's time. Contrasted with a bill for a similar number of holes made in the orthodox way with drilling rigs, the cost is ridiculously small. But by far the greatest advantage lies in the fact that the operator, by doing his own drilling, thereby gains a much better idea of the sequence and condition of the strata, than the perusal of the most carefully and accurately worded "log" could possibly allow. Moreover, the tool can be used in situations where a drilling rig would be out of the question, such as on the velvet turf of a carefully tended lawn.

In spite of the smallness of the hole, a core sample can be obtained which is amply sufficient to enable a stratum to be identified. It will be realised, of course, that the speed of penetration varies according to the nature of the soil. In marshy ground or wet clay, holes 49 feet deep can be made in just over twelve minutes, whilst in tough London clay a speed of one foot per minute can easily be made up to a depth of 30 or 40 feet. The tool, depending as it does on the tendency of certain materials as clays, coherent sands, brick earth and the like, to flow under blows or pressure, cannot penetrate ground which does not respond to these. For instance, the tool will not go through rock, and although shingle and coarse gravel can be penetrated it is hard on the tool but harder still on the operator, as with such sorts the pebbles fall in and by exercising a cam-like action on the rod, not only retard penetration but render it hard work to withdraw the outfit. The weight of the equipment, which includes all the tools and rods sufficient to reach a depth of 48 feet is about 90 lb.

Tramways and Buses.

Readers of THE NEAR EAST AND INDIA have always been interested in the traffic problem, and the report recently made by Mr. D. L. Clarke and Mr. G. Bryan at the Ministry of Home Affairs, Northern Ireland, who conducted the inquiry into the application of the county borough of Belfast for confirmation of the traffic by-laws with respect to omnibuses, made by the City Council, adds much to our knowledge. It says that no tramway undertaking of any real importance in Great Britain, has been abandoned in favour of omnibuses.

Tramway undertakings, it is said, have some very important advantages over omnibuses for city traffic. In the first place, they have a greater seating capacity and can deal rapidly with a very much larger volume of traffic.

Secondly, the evidence, which was not contradicted at the inquiry, shows that the cost of running a tram is one-third less per cent. than that of running an omnibus. In the third place, there is the very important factor of safety, and, fourthly, the fact that the carrying capacity of tramcars can be extended, at what are known as the peak hours of traffic, without danger in a way that cannot be done with motor buses without undue risk. It is made clear by the inspectors that they are not countenancing overcrowding on any type of public service vehicle, but they add that it is universal experience that at the rush hours a certain latitude must be allowed in so far as it is consistent with public safety. They have no hesitation in saying that it is quite legitimate and safe that a certain number of standing passengers should be allowed in tramcars, but they added, according to the *Belfast News Letter*, such expansion could only be allowed in motor omnibuses to so small an extent as would not materially affect the matter without incurring the risk of a serious accident.

On the other hand, said the inspectors, omnibuses have certain advantages from the point of view of convenience and, in certain circumstances, of efficiency over tramcars. Under favourable conditions they are capable of higher speeds without undue risk; for short distance traffic there is no great difference, but for the longer distances towards a city boundary, the speed of omnibus traffic is greater than that of trams. This is due to the fact that invariably, as the boundaries are approached, the area becomes more thinly populated and there is less frequent picking up and setting down. Instancing the evidence given that the omnibus allowed people to go home for lunch in outlying districts, the inspectors say that they are of opinion that supplemental express omnibus services at the rush hours are of great public convenience. In fact, it is difficult to conceive any other practical method of dealing with the lunch hour and rush hour problems than that of putting on extra omnibuses to assist the tramcars and the existing bus services.

OLD GREEK GOLD LOANS.

The Council of Foreign Bondholders announce that in view of the recent arbitral decision in the dispute between the Greek Government and the International Financial Commission the next coupons will be paid at the following rates per £100 bond.

	Fixed Minimum Interest.	Additional for arrears of 1925 and 1927.	Total.
	£ s. d.	£ s. d.	£ s. d.
4 per cent. Monopoly Loan	... 0 17 3	... 2 9 7	... 3 6 10
5 per cent. Funding Loan	... 0 8 0	... 3 2 0	... 3 10 0
5 per cent. 1881 Loan	... 0 16 0	... 3 0 0	... 3 16 0
5 per cent. 1884 Loan	... 0 16 0	... 3 0 0	... 3 16 0
5 per cent. Piræus Larissa Loan	0 16 0	3 0 0	3 16 0

The Council understand that the payment in respect of the Rentes cannot be fixed until the plus values of 1928 have been ascertained.

Turkey is an important market for foreign hosiery of average quality and medium price (says an American Consular report). While there are a number of small establishments in Constantinople specialising in the manufacture of medium grades of hosiery, especially socks, the domestic product still leaves much to be desired from the point of view of quality, style, and construction. Medium and average grade hosiery has been manufactured locally for the past several years, but inferior in quality to the foreign product. As a consequence, the majority of consumers express a decided preference for the foreign article even at higher prices.

BULGARIAN SHIPPING DEVELOPMENTS.

The following review of shipping developments in Bulgaria is given in the recent British Consular Report.

In the port of Varna there has been a slight increase in British tonnage. Tonnage of other nationalities remained substantially the same as in recent years.

The Bulgarian Trading and Steam Navigation Company ordered during the year from the Werft Nobiskrug of Rensburg a cargo and passenger steamer of 300 tons to cost £29,000 for delivery in March, 1928, also the cargo steamer "Carniola," from the Lloyd Triestino Company, of 2,941 tons for the sum of £28,000.

A new Bulgarian Shipping Company has been formed at Varna—the Bulgarian Co-operative Shipping Society. "Bulgaria." The Company has raised at the time of writing a capital of 2,000,000 leva, and it aims at the purchase of several small steamers for coastal trading.

The shipbuilding yard and dry dock begun in 1926 by the Bulgarian Society for the Construction of Ships, Locomotives and Trucks was last reported to be almost complete and to be starting work in March, 1928. The society has secured orders amounting in all to 15 million leva, and increased its capital to the sum of 32,000,000 leva.

The Bulgarian Government has abandoned its scheme for enlarging the port of Varna, which is considered large enough for existing requirements.

In the port of Bourgas there has been an increase in British tonnage. There has been a slight decrease in the total tonnage of all nationalities, due to the disappearance of Turkish and Greek coasting vessels.

The situation with regard to freights is far from satisfactory, and the disparity in rates from United Kingdom and Continental ports still continues, with the result that British lines are still obliged to accept the lower rates ruling from the Continent. In order, therefore, to compete with his Continental rival the British exporter has, in many cases, to adopt the highly inconvenient procedure of shipping goods to Antwerp, for example, for transshipment into bottoms bound for the Black Sea which in all probability also load at a British port.

The South India Railway Company has placed orders for two twin-screw passenger vessels with David and William Henderson and Co., Glasgow, and for 11 boilers for locomotives with the Hunslet Engineering Co., Leeds.

It is reported that the Ivo Rachitch Atlantic Navigation Co., of Split, and the Yugoslav-American Shipping Co., of the same port, have arranged an amalgamation. The united undertaking, which is to be known as the Yugoslav Lloyd Company, will have a capital of 275 million dinars (£1,000,000) and will possess 24 vessels.

The capital of the Banque de Credit Franco-Roumain is being increased from 10,000,000 francs to 11,000,000 francs. It has also been decided to change the bank's name into Banque Commerciale de France, and to establish a branch in Bucharest.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

TURKEY.

Motor Patrol Boats.—A report has been received from the Commercial Secretary at Constantinople (Colonel H. Woods, O.B.E.) as to the possible requirements of the Turkish Customs Administration with regard to motor patrol vessels. Further particulars can be obtained by interested British firms upon application to the Department of Overseas Trade. Reference No. A.X. 7207 should be quoted.

EGYPT.

Pumps, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply of pumps, electric motors, filters, air compressors, also the sinking of an artesian well. December 20. (D.O.T.)

Paper, Etc.—Tenders are invited by the Ministry of Finance for the supply of paper, stationery, chemicals, for Photocopying Office, other miscellaneous articles such as canvas sacks, required for the year 1929-1930. January 31.

Damp Proof Braided Cords, Etc.—The Egyptian State Railways, Telegraphs and Telephones invites tenders for damp proof braided cords and plugs; structural steel, rivets, bolts and nuts; turnover levers complete; chamois leather.

Iron Money Safes.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron money safes. January 2.

Machine Tools, Etc.—The Egyptian Ministry of Education invites tenders for the supply of machine tools, steam engine 12/15 B.H.P., boiler and workshop equipment, etc. December 20. (D.O.T.)

Bridge.—The Ministry of Communications, Administration of Bridges and Roads, Egyptian Government, invites tenders for the construction of a bridge over the Canal Ibrahimieh. January 3. (D.O.T.)

Electric System.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a proposed electric system for Beba. January 24. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, December 11).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 12).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, December 15); s.s. Hatimura for Bombay and Karachi (London, December 22).

Cunard Line.—S.s. Bantia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow and Swansea December 7, Liverpool December 8); s.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 22, Swansea-December 27).

Johnson Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 19); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 19).

P. and O. Line.—S.s. Rajputana for Bombay (London, December 7); s.s. Behar for Calcutta (London, December 8).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 13); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 22).

Ellerman and Papayanni Lines.—S.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 8); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool December 8, Swansea December 13); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); s.s. Algerian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool December 22, Swansea December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 28); s.s. Kyno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 29); s.s. Trentino for Algiers*, Malta, Piræus, Syria*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 5). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient ports.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ...	Dec. 11	†ASSYRIA ...	Jan. 11
*†BRITANNIA ...	Dec. 31	*†ELYSIA ...	Jan. 29

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 4.

The stock markets have again spent a fairly quiet week, the approach of the account having helped to slow things down in the latter part. The new issue of British Government $4\frac{1}{2}$ per cent. Treasury Bonds, into which holders of National War Bonds and Treasury Bonds maturing next February have rights of conversion, has been well received in the Consol market and the new bonds are expected to have a favourable influence upon the prices of other British Government securities. The option of exchange into 4 per cent. Consols in July next at a price very little above the present quotation gives them an attraction for investors who cannot at the moment decide whether they require a long or a short-dated investment. An interesting event of the week was the publication by the Bank of England of its weekly statement in a new form. The new statement shows the effect of the recent amalgamation of the Treasury and Bank of England note issues and also contains innovations in the way of more detailed information regarding deposits and securities which will be generally welcomed in that they render the statement considerably less cryptic than it has hitherto been.

Reading Balance-sheets.

The average investor cannot have an inside knowledge of the business in which he invests. His decisions must be based on his general knowledge of the industry in question and upon published statements of the company. Of these published statements the balance sheet is one of the most important, and before buying shares in any company an investor should carefully study the most recent of these documents. A balance-sheet shows the condition of the company at a certain date, what are its assets and what its liabilities: a comparison between two balance-sheets shows the changes that have occurred between those

two dates. An intending investor should first consider the amount of capital ranking before and after his own in case of winding up, and for a share in profits. Similarly, attention should be given to the size of the reserves the company has accumulated out of profits. These increase the funds available to earn profits and may be utilised in an emergency to tide over bad periods. The present solvency of the company can be gauged from a comparison of its floating assets—cash, marketable investments, stocks and debtors—with its current liabilities—creditors, accrued interest, etc. An equally important question, the company's earning power, is less easy to assess. The Companies Act of 1928 enforces the segregation of fixed assets distinguishing tangible items, such as plant; intangible, such as goodwill; and "fictitious," such as preliminary expenses and floating. But the investor cannot ascertain whether the amounts at which the assets are valued represent their realisable worth.

Patent Companies' Finance.

That many investors do not give the future prospects of companies in which they invest their money a sufficiently critical examination is demonstrated by the recent popularity of new issues in companies formed to exploit untried patents. During this year 51 companies exploiting patent rights have invited public subscriptions for £9,994,025 of capital. In only 15 of these companies has the invention been tried out on a commercial scale. In the case of an appreciable number of the inventions the patent rights had not actually been granted, a public issue being made on the strength of a mere patent application. Even where an invention has been patented the investor should remember that at best a patent, with its maximum term of 16 years, is a wasting asset. Moreover, a patent process is not necessarily a valuable asset; it has to prove its worth in competition with other processes, not only those of the same type but those which have other advantages. The investor should concern himself less with the merits of the invention as an invention than with the prospects of the company apart from its patent rights, depending on the outlook for the industry as a whole, and the capabilities of the men directing the company's activities.

Bank Shares.

The announcement of a bonus offer by the Standard Bank of South Africa will have directed the attention of many investors to the possibilities of bank shares as an investment. Bank shares are popular because they are of unimpeachable security. Banks depend for their success upon public confidence and therefore have all built up strong reserves. In addition to disclosed reserves which often equal the bank's capital, there are large hidden reserves. All these funds are earning profits for the shareholders and are also available for use in time of emergency, thus rendering the capital more secure. It is true that in most cases bank shares are not fully paid-up, so that there is a theoretical possibility of shareholders being called upon to make up a deficiency in assets. As there is practically no chance of this being needed in the case of any well-known bank, at least in Britain, the risk is more theoretical than real, but it does serve to give buyers rather better prices. Banks operating in the colonies or in other new and growing areas, such as Latin America, must take rather greater risks than is usual with banks in older countries. A fairly high yield for the class of security can therefore be obtained on some overseas bank shares, as, for example, the Anglo-South-American Bank (£6 3s. per cent.) or the Bank of British West Africa (£5 5s. per cent.). The ultra-cautious may prefer shares in banks operating in this country, such as Lloyds, which yield £5 1s. per cent., or Martins (£5 3s. per cent.).

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from
RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

British Consular Reports

IX.—BULGARIA.

(Continued from page 662.)

Aviation.

The opening of the first commercial air lines in Bulgaria, two in number, took place in 1927.

At the end of January an agreement was signed between the Bulgarian Government and the Bounavad Aviation Company, a Germano-Bulgarian concern created with the assistance of the German firm of Junker. The company have been granted sole exploitation rights during ten years of the lines Vidin-Rustchuk-Varna, Sofia-Rustchuk-Varna and Sofia-Bourgas. Of the three, only the line Sofia-Rustchuk-Varna is in operation as yet, having been inaugurated in October, 1927. It maintains weekly two passenger, postal and goods services in both directions, with all-metal Junker planes, the single passenger fare from Sofia to Varna working out at roughly £3 16s. The Company are to receive from the Bulgarian Government a subsidy of 10 million leva, which will be refunded at the end of the concessionary period. They are entitled to the free use of Government aerodromes.

In March the Bulgarian Government further concluded an agreement with the French "Compagnie Internationale de Navigation Aérienne," granting to the latter during three years the sole right to exploit the aerial line Dragan-Sofia-Plovdiv-Svilengrad, forming the Bulgarian portion of of the company's through line from Paris to Constantinople. The service, which is for passengers, mails and goods, was inaugurated on October 1, and aims at two flights a week in each direction. Under the company's agreement flights may be suspended during three months of the year in winter, a provision which has already been taken advantage of.

Eighty per cent. of the ground personnel must be Bulgarian and one-third of the flying personnel, one year from the opening of the line. The company have permission to build two aerodromes in Bulgaria.

On April 9 the Bulgarian Government conceded to the Czech firm "Aero-Praga" a concession for the erection on Bulgarian soil of an aeroplane factory capable at the end of the fifth year of its existence of an annual output of not less than 100 aeroplanes. The company may, if desired, extend its production to embrace lorries, automobiles, agricultural machinery, etc. It is not yet known what progress has been made towards realising this concession.

British Trade.

In comparison with competitors from other countries, British firms as a general rule quote higher prices and offer less credit. In cases where credit is offered it is too often without sufficient inquiry into the status of customers or without adequate security, and appreciable losses have ensued during recent years for no other reason.

British firms might still further increase their business in counts at present catered for by Italian and Czechoslovak firms. Cotton piece-goods of British manufacture are either too expensive, or are not offered on competitive credit terms, or do not cater for the demands of Bulgaria customers in quality and design.

Woollen piece-goods of British manufacture maintain a good reputation for quality, but manufacturers might aim at providing shorter lengths of any given pattern, and so cater for those of exclusive tastes.

In both light and heavy machinery British prices are too high and credit is insufficient. The majority of orders for machinery at present go to firms in Czechoslovakia. The majority of orders for copper and aluminium sheets go to German firms who offer better credit facilities than the British. For black and galvanised sheets British firms are unable to compete with

the lower prices quoted by Belgian firms, who secure the majority of available orders.

Rails.—British firms must lower their prices in order to compete with French and Belgian manufacturers.

Whatever difficulties British firms have experienced in the past in competition with Germany in the finer chemicals and aniline dyes, they should have no difficulty in increasing their orders for the heavier chemicals such as caustic soda and naphthalene.

Radio Sets and Parts.—A few British loud-speakers have been sold in Sofia. In general British prices are too high, and insufficient credit is forthcoming. German, Dutch, French and American sets and parts secure the majority of orders.

Toilet Articles, Soaps, Perfumery. — Imports of British manufacture total annually some 5 million leva. There is room for increase in the imports of soaps, tooth-brushes, razors, etc., if prices are reduced.

MOTORING FROM CAIRO TO THE CAPE.

Mr. G. S. Bouwer, the South African racing motorist, averaged just on 250 miles a day for 9,000 miles on his return journey across Africa from London, which he left in August to Cape Town, where he has just arrived. He undertook the adventure to demonstrate the practicability of a highway between Cairo and the Cape, and he travelled by a route which he had prepared for himself seven months ago. "Although I averaged 300 miles a day over the iron-stone Nubian deserts," Mr. Bouwer states in a message to the Dunlop Company in London, "and 500 miles a day on bush track in Central Africa, I had a bare 30 hours in which to complete the last and most difficult 1,000 miles, and the slightest delay would have ruined my chance. For the first time in my experience I drove this last lap without one puncture; I had never previously had fewer than four on that route. I had no mechanical trouble at all, and only one crash when I hit a tree stump at speed, smashed two front springs, and bent a front axle." At one time Mr. Bouwer was 90 miles from any water supply, and he carried a 40-gallon petrol tank in the back seat, with a five-gallon auxiliary oil tank.

The gross production of crude oil of the Phoenix Oil and Transport group of companies for November was 29,502 tons.

The output of the Anglo-Egyptian Oilfields for the week ended November 30 amounted to 5,215 tons.

The ordinary general meeting of the Associated Cotton Ginners of Egypt, Ltd., will be held at Alexandria on December 21.

The production of Hamilton's Oil Concessions (Roumania) for November amounted to 4,500 tons (31,500 barrels).

The Malta and Mediterranean Gas Company announces an interim dividend of 4 per cent., free of tax, on the ordinary shares, payable December 13.

An Alexandria message states that the second Government estimate for the cotton crop of 1928 is as follows:—Unginned: Sakellaridis, 2,390,015 kantars; other varieties, 4,494,102 kantars. The average yield of Sakellaridis is 2.99 kantars and other varieties 4.79 kantars. The total average yield is 3.96 kantars. Ginned: Sakellaridis, 2,342,215 kantars; other varieties, 4,863,630 kantars. The average yield of Sakellaridis is 2.93 kantars and other varieties 5.17 kantars. The total average yield is 4.14 kantars.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date November 30:—

Currants.

Trading continued of a disappointing character, and unfortunately no improvement in the demand can be reported. Throughout the month there has been an apathy and lack of confidence on the part of all branches, the distributing trade being undoubtedly nervous of falling prices and holders showing great anxiety to liquidate, consequently we have experienced an easing in values the whole time.

The Central Currant Office has reiterated its obligation in the following terms:—"The Central Currant Office undertakes to buy, at any time, any quantity offered of the 1928 crop at 3,500 drachmæ per 1,000 Venetian pounds, corresponding to about 46s. 6d. per cwt., duty paid. This constitutes, therefore, a minimum price, and remains in force until August 1 next, when the Central Currant Office undertakes to purchase any surplus at the following rates, viz.:—3,900 drachmæ for Provincial; 4,000 drachmæ for Pyrgos, Amalias, Zante, and Patras; 4,100 drachmæ for Gulf and Vostizza." This will have a beneficial effect throughout the country, as it must be realised that market risks at present prices are negligible.

Values show a decline on the month of 1s. to 2s. on lower and medium grades, and 2s. to 5s. on the first qualities of Vostizza. Sales were: Pyrgos, 47s. to 47s. 6d.; Amalias and Patras, 48s. to 49s. 6d.; Zante, 48s. 6d. to 49s. 6d.; Gulf, 52s. to 56s.; Vostizza, 53s. to 62s.; Finest, 68s. Closing quotations:—Pyrgos, 47s.; Amalias and Patras, 48s. to 50s.; Zante, 48s. to 49s. 6d.; Gulf, 52s. to 56s.; Vostizza, 53s. to 60s.

Sultanas.

Smyrna.—In the early days of the month the small arrivals per s.s. Roumelian and Polo were quickly disposed of, and the trade had recourse to London to fill its requirements, but later arrivals per s.s. Mardinian, Bosnia, Kantara, Algerian, and Oporto (although these steamers brought very small cargoes in comparison with what we are accustomed to at this season of the year, and a proportion also were against c.i.f. sales), were more than sufficient to meet requirements, and the article has lapsed into a state of extreme quietness, with values on the decline. Business was done in Medium qualities at 40s. to 42s. 6d., Good at 50s. to 52s., Fine 56s. to 62s.

Cretan.—Coloury parcels of this growth were disposed of at 61s. to 70s.

Greek.—Only small quantities are arriving. Sales are: Ordinary qualities, 40s. to 42s. 6d.; better grade, 60s. to 65s.; fine, 70s. to 80s.

Old Fruit.—In very small compass, trade being retail at 39s. to 40s.

Figs.

The demand has fallen off, and little progress has been made with the small stock remaining. Large Boxes, Layers, 50s. to 80s.; Small Boxes, 65s. to 74s.; Locoums, 85s. to 105s.; Pulled, 42s. 6d. Bags Genuines, 31s. to 33s. 6d.; Choice, 35s. to 36s.

Messrs. C. J. Giraud and Co., in a report dated November 24, review the Smyrna market position as follows:—

Sultanas.

The estimated sales to date total 34,100 tons, as against 35,000 tons for the same period of the previous twelve months.

Closing prices Smyrna, per cwt. c.i.f. London, for types 12 to 17 are:—27s.; 29s.; 31s.; 34s.; 38s.; 42s. 6d.

Market Conditions.—Since our last report, issued on November 3, the market has remained fairly steady. A slight improvement in the demand was noticeable during the earlier part of the month, but this semblance of activity has died out this week.

Prices in local currency have hardly fluctuated over this month, but an improvement in exchange rates results in a small reduction in foreign equivalents on parities of the beginning of the month.

It is difficult to assess accurately the extent of stocks remaining in the country. They are variously estimated at between 10,000 tons to 13,000 tons.

Types 13 and 14 constitute the bulk of supplies now available. Type 18 may be regarded as practically exhausted. The visible supply of type 17 on the market is exceedingly small.

Figs.

The estimated arrivals on the Smyrna market since the opening of the season total 23,600 tons, as against 21,547 tons for the same period of the previous twelve months; the estimated sales to date total 24,100 tons, against 21,547 tons.

Market Conditions.—The balance of stocks remaining is low grade fruit and will be consumed locally for distillery purposes. The export season is over.

For the first nine months of the current year Bulgaria had an adverse trade balance of 399 million leva, the exports amounting to 3,888 million leva and the imports to 4,287 millions. For the corresponding period of the previous year there was a favourable balance of 272 millions.

COMPANY NOTES AND REPORTS.

P. AND O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30 last states that after providing for depreciation and adding £92,050 to the reserve fund, bringing it up to £1,700,000, and setting aside the premium of £1,000,000 received on the issue of new deferred stock, to be used for new tonnage construction, there is a credit balance on the year's accounts, including £118,326 19s. 7d. brought forward from last year, of £923,029 os. 10d., against £918,001 os. 11d. in the previous year. The directors propose to deal with this amount as follows:—(1) 5 per cent. dividend on the preferred stock (of which 2½ per cent. was paid in May last), £152,000; (2) 12 per cent. dividend on the deferred stock, free of income tax (of which 5 per cent. was paid in May last), £514,435 9s. 10d.; (3) reserve for redemption of debenture stock, bringing it up to £1,360,000, £103,132 7s. 2d.; (4) write off charges on issue of new deferred stock, £11,531 7s. 9d.; (5) transfer to provident good service fund, £20,000; (6) carry forward to next year, £121,929 16s. 1d.—£923,029 os. 10d.

The China, Devanha, and Assaye have been sold at prices considerably above their value in the company's books. The difference between the value at which they stood in the books and the prices realised has helped to depreciate the book value of the rest of the fleet. The Ranchi again made a number of cruises to the Mediterranean and North Sea ports, and as the results obtained were satisfactory, she will be similarly employed next year. The new steamer, Viceroy of India, which will be delivered in the spring, will also make a cruise after a voyage to Bombay.

By re-arrangement of the programme the company is now able to provide as a rule a direct weekly service by mail steamers between this country, Marseilles and Bombay in both directions, avoiding transshipment at Aden, which permits of the withdrawal of Razmak from the Aden-Bombay ferry service and leaves her free for direct runs between Europe and Bombay.

A property has recently been acquired in Warwick House Street, immediately at the back of the company's passenger office in Cockspur Street, and a building of five floors where passengers' baggage can be received and stored is now being erected which should be ready for use by the end of the year.

The directors explained in last year's report that the insurance fund for outside insurance had been closed, but that the account remained open till all outstanding risks had been met. At the end of the financial year the amount at credit of this fund was £3,073,278 10s. 4d., which is treated as a liability. There are still some claims to pay, but it is anticipated when these have been liquidated in the course of the current or year following the fund will stand at about £3,000,000.

There are signs of improvement in trade, but the labour situation in Australia in September and October gave a set-back in that country, as has so often been the case before. With the accession to power again of Mr. Bruce, the Prime Minister, it is hoped that what has been tantamount to a negation of law will now cease.

Trade with China continues to suffer by the unsettled condition of affairs in that country. The company shares with the mercantile community, both British and Chinese, the hope which found expression in the King's speech at the opening of Parliament, that the efforts which China is making to establish a settled government will succeed, and with the cessation of civil war, better trade conditions may be expected to ensue.

The business with India is without special feature, but the export trade of the country shows a general increase in almost all the principal items, and the exports to Europe have doubled. The company's passenger traffic continues to be maintained.

MADRAS AND SOUTHERN MAHRATTA RAILWAY.

The report for the year ended March 31 last states that the net earnings of the State and company's lines, after excluding all earnings and working expenses of branch railways worked under separate contracts, were Rs.3,37,09,065. Adjustments in connexion with unrealised outstandings, and provident fund and gratuity transactions of employees of old Madras Railway, bring the total net earnings to Rs.3,38,14,173. The divisible surplus amounted to Rs.2,64,06,048, of which the company's share is Rs.71,55,868. Excluding the guaranteed interest of 3½ per cent. per annum, the surplus profits payable to the company, after deduction of Indian income tax and super-tax, amounted to Rs.40,59,010. The company's share of the surplus profits from the Mysore State Railways for the year amounted to Rs.60,540. The combined total of the company's surplus profits, remitted partly at 1s. 6d. and partly at 1s. 6 1-32d. per rupee, amounted to £311,307. The balance in stockholders' revenue account on April 1, 1927, was £522,518, of which £335,156 was hypothecated to dividends, in addition to 3½ per cent. guaranteed interest, paid in 1927-28, leaving £187,362 available for a carry forward. In addition to the surplus profits of £311,397 of 1927-28, a sum of £33,151 was realised as interest on the company's investments. On the other side, the income tax demand for the year was £46,620, of which £21,961 was received from India in the form of relief in respect of United Kingdom income tax, reducing the charge to stockholders' revenue account to £24,559. Incidental expenses amounted to £1,551, leaving available for dividends payable in 1928-29 a sum of £505,799. The directors recommend a final additional dividend, exclusive of £1 15s. per cent. guaranteed interest, of £4 5s. per cent., less English income tax, payable on January 1, 1929, leaving £170,643 to be carried forward. The proposed distribution will bring the total distribution for the year up to 11 per cent.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 28:—

Egyptian Futures.

Sakel Contract.—For the greater part of the week this contract has been dominated by the strength displayed in Alexandria, where, as mentioned by us last week, some influential interests are trying to manipulate prices to higher levels. So far their efforts might be termed to have been successful, inasmuch as a fairly substantial rise has been engineered; the movement, however, in our opinion, has started too early and lacks the essential backing of trade and general outside support. Nevertheless, it must be borne in mind that Sakel markets this season will be particularly vulnerable to manipulation and it appears probable that Sudan Sakels will again prove a most valuable asset to Lancashire both as a spinning proposition and a price restraining factor. By forcing Egyptian Sakels right over their real economic differences with other growths holders in Alexandria are working directly against their own ultimate interests, and the effect in this country in particular is to induce spinners by every effort to utilise other cottons. Mills this season are particularly well placed to cut down their consumption of fine qualities, as not only in certain counts are yarns being sold at a dead loss, but, generally speaking, the whole section hold very light engagements for this period of the year. Trading in our market continues to be cramped by the impossibility of importing owing to the local discount with Alexandria; we cannot anticipate the position improving until we get more into line with overseas values, as a contract which cannot attract shipments or hedges is bound to suffer from lack of interest. This position is beginning to be more widely recognised here and it is quite probable that in the near future steps will be taken to reconsider the position of certain varieties, white cotton in particular, with a view to broadening the market. Yesterday morning values showed about 100 points advance on the week, but since a limited amount of long liquidation and a set-back in the American market have caused a reactionary tendency. We have little confidence in the recent movement, and are quite prepared to witness the development of an easier undertone, especially should the recent "bullish" enthusiasm displayed in other markets receive a check.

Upper Contract.—This market continues to attract attention from speculative, straddle, and in lesser degree trade interests, and considerable activity has again been displayed in the trading throughout the past week. Values have moved pretty much in accordance with the fluctuations in the American markets; hence, for the greater part of the time since our last report a gradual upward movement has been in progress. At the time of writing, however, a moderate reactionary tendency is in operation, the more cautious portion of the "bull" element liquidating their holding, evidently considering that the recent appreciation in the level discounts possibilities of a further rise in the immediate future.

Straddle interests who are still very heavily long in both the January and March positions show no sign as yet of liquidating or transferring their cotton; in the meantime we notice continued selling here by spot houses, and have little doubt that this means further heavy additions to the already large imports which will augment the local stock during the next few weeks. The trade demand still shows signs of slackening, due probably in part to spinners having booked requirements freely during last month and also to the American staple position. For a long view present prices may be considered reasonable, but for the immediate future some further easing may be witnessed; a fairly large long account has been gradually accumulating latterly and a halt in the upward movement in American cotton would be quickly reflected in the action of this market.

Egyptian Spot.

In sympathy with futures, a further substantial advance has taken place in the quotations for spot Egypts, which now show an advance of 205 points for F.G.F. Sakel, 150 for F.G.F. Uppers, and 65 points for F.G.F. Pilon, since the low levels touched at the beginning of the season (September 19, 1928). This unlooked-for strength has rather taken the trade by surprise, and as the recent rise has been the result very largely of speculative manipulation, it can hardly be wondered at that in many quarters the rise is considered unjustified. This does not necessarily imply that the advance will not be maintained, however, and we advise consumers to review the situation very carefully before committing themselves to a definite policy at the moment.

Although the strongest advance has taken place in Sakel, there has been an entire absence of anything in the nature of panic buying on the part of spinners; in fact, trading in Sakels this week has been little more than normal, which, for these times, means very poor. Most of the buying has been in the "off" qualities, generally between 12d. and 16d., with a much smaller percentage within a range of 50 to 150 on contracts. Fine Sakel has again been neglected. In Uppers, as usual, a fairly steady business has resulted at from 50 off to 25 on January. Pilon has been in better request at from 13½d. to 14½d., and Nahda cotton also has, this week,

attracted some attention from buyers, who have found this particular market somewhat irregular. An improved business has taken place in Sudan Sakel, and it looks as if interest in this growth was slowly reviving.

C.i.f. business has been very quiet on the whole, but forwardings to spinners last week were returned at 11,854 bales Egyptian and 965 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 1,100 bales Sudan. Quotations of Sakel show a net advance of 80 points, and those of Upper and Pilon 45 points, on the week. F.G.F. Sakel to-day, 19.10d. F.G.F. Upper to-day, 12.70d. F.G.F. Pilon to-day, 13.30d. nominal.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 22, state:—

Since our last report the futures market has been relatively active and the undertone rather firm. The week's summary of price movements is as follows:—Sakellaridis: November, 35.65 dollars, 0.59 dollars up; January, 36.19 dollars, 0.64 dollars up; March, 36.77 dollars, 0.78 dollars up; May, 37.20 dollars, 0.80 dollars up; November, 1929, 37.72 dollars, 0.92 dollars up. Ashmouni: December, 22.48 dollars, 0.33 dollars up; February, 23.05 dollars, 0.40 dollars up; April, 23.55 dollars, 0.45 dollars up; October, 24.52 dollars, 0.38 dollars up.

Sakel.—During the week under review we have to record a succession of slightly, but continually, advancing markets, and this in spite of the fact that the amount of business done has not been of great volume. It is difficult to assign reasons for the continued firmness, but among the contributing factors which may be mentioned are the narrowness of the market, the marked lack of sellers, the not too abundant supply in prospect for the season, and finally, the disinclination of operators generally to take the bear side of the market in Sakel.

The demand from spinners, although moderate, continues to be fairly regular. It is generally accepted that spinners are not well

New York: Brentano's Fifth Avenue and 27th Street.

Boston (Mass): Smith and McCahee, Ashburton Place.

covered with supplies of Sakel, but, as they consider the ruling premium over the prices of other growths to be exaggerated, they are only covering immediate needs.

Even giving due consideration to the cautious attitude of spinners, any marked reaction from present prices does not seem probable, at any rate for the time being; it is only logical, however, sooner or later to look for some narrowing of the present premium of Sakel over Uppers.

The Sakel/Uppers straddle (January/February) this week stands at 1,314 points, against 1,290 points last week and 830 points at this time last year.

Against the third November tender, 3,250 kantars dockets were issued, making the total for the month 18,500 kantars.

Uppers.—At the beginning of the week the market for Uppers looked somewhat heavy; this, however, quickly cleared with the appreciable advance in New York of the last day or two, helped by a fair amount of new business from spinners, chiefly for prompt shipment. The effect was immediately apparent on the Minet el Bassal spot market, where quite exceptional activity has been the feature of the week. We maintain our opinion that Uppers at present levels are very reasonable, and we look for a material advance in prices in the not distant future. The Ashmouni-American straddle (December/January) this week stands at 250 points, against 261 points last week and 754 points at this time last year.

The week's receipts amount to 391,731 kantars, against exports 252,393 kantars; the stock in Alexandria stands at 3,111,637 kantars.

Spot.—We have had another busy week at Minet el Bassal and

sales amount to about 34,500 bales, of which we estimate about 10,300 bales Sakellaridis, 21,100 bales Ashmouni and Zagora, 2,100 bales Pilion, 600 bales Nahda, 250 bales White, and 100 bales other varieties.

Sakellaridis: A good business has been done covering all grades. Spot differences are without much change except that Fully Fair and below show some slight tendency to ease.

Ashmouni and Zagora: Continue in very good favour with buyers, and an excellent turnover has resulted covering all grades, but with medium qualities preponderating. Spot differences are generally without quotable change, but the grades round Fully Good Fair are inclined to stiffen.

Pilion: A good business has been done in all qualities. Spot differences are slightly dearer than last week.

Other Varieties: Nahda, as for some time past, is quickly absorbed as and when offered, and a good business has been done at about last week's differences. White has been in good demand and a good business has been done; spot differences are rather dearer. A small business has taken place in Maarad and Fouadi.

Up-country: There is nothing very special to report. The crop movement is generally lighter and the advance in the futures market has encouraged holders to be more exacting, particularly so in Upper Egypt. The Government has not yet issued any official announcement as to the law restricting the acreage. It is generally expected that no special announcement will be made, the law, strictly speaking, remaining in force until the end of the next cotton season.

Notes of the Week.

Critical Days in Yugoslavia.

The appointment of Colonel Bozho Maximovitch as Governor of Zagreb District must be regarded, unless all indications are at fault, as a definite attempt on the part of the Belgrade Government to introduce scorpions where hitherto it has been content with whips in its dealings with the Croats. After the incidents in Zagreb on December 1, when collisions between troops and police on the one hand and the townsfolk on the other had fatal results, the former Governor, who was a civilian, at once offered his resignation by telephone to the Government on the ground that he did not approve of the action of the military authorities. He was summoned to Belgrade, and the Prime Minister, after receiving his report, refused to accept his resignation. Dr. Koroshetz would now seem to have been overruled in this matter, and it is hardly a matter for surprise that the acceptance of the Governor's resignation and the nomination, to fill his post, of a military officer with the reputation of an uncompromising disciplinarian should be attributed to the military clique which for so many years has been all-powerful in the counsels of successive Radical Governments. Colonel Maximovitch might in normal circumstances be a model Governor; but the times for Yugoslavia are out of joint. Two ways of dealing with the internal problem of the country offer themselves to the Belgrade Government—stern repression of the Croats or to bring about harmony by discussion and compromise. The argument of the Serbs is, no doubt, that they have tried the latter, but without success; they consider themselves, therefore, obliged to have recourse to the former.

Serbo-Croat Incompatibility.

It has become impossible to disguise the fact that the situation in Yugoslavia is serious. The trouble, however, is essentially a domestic one, and should not have any reactions abroad. Briefly put, the Croat cup of bitterness has been filled to overflowing. Ten years of

association with the Serbs have convinced the Croats that the pretence of co-operation cannot be maintained any longer. To the Croat mind the Serbs cannot and will not co-operate. Yugoslavia for them is Greater Serbia, and the only people to administer a Greater Serbia are the Serbs. Serbian administration, moreover, is something with which the Croats have no desire to be identified. It is no mere coincidence, they point out, that corruption has been brought home to the families of two Serbian Prime Ministers; if the offenders have gained pre-eminence in a practice indulged in by all, it is not that they are more corrupt than their fellows, but that their opportunities have been greater. Again, the handling of the Macedonian question by the Serbs, has been, according to the Croat indictment, such that, when the facts are fully known abroad, the Croats will not wish to be held, in foreign opinion, jointly responsible for it. Points of incompatibility can be multiplied indefinitely. The Croat, it is urged, is of the West, modern; the Serbs have not yet thrown off their five centuries of subjugation by Turkey, and, in spite of individual exceptions, official Serbia remains Oriental and mediæval. The breach, it is to be feared, is none the less complete because the Croats have so far kept themselves in hand. They have made known their point of view and have broken off relations with Belgrade, but they have taken no violent action against the *status quo*. The weakness in their position is that they have made no provision for the next stage; in adopting the attitude that all that remains to be done is for Serbia to yield them what they want, they are acting in opposition to what their instinct tells them that the Serbs are likely to do, and they appear content to wait to see what will happen. The danger in the situation is that the Serbs may judge the Croats by themselves, and argue that, because Zagreb has not proceeded to extremes, it is, therefore, half-hearted in its protestations and can be dragged on to submission. If the appointment of Colonel Maximovitch represents an attempt to give effect to this line of reasoning, then the final cleavage may well be near.

A Federal Solution.

In no country will the breach between Serbs and Croats be more regretted than in Great Britain. It was hoped by those who had knowledge of the Southern Slav peoples that the great testing-time of the War and the political necessity for unity would engender in the two main branches a spirit of co-operation which would make Yugoslavia a strong factor in South-East Europe. How weak the differences between Serbs and Croats have made the Triune Kingdom has recently been shown by the ease with which M. Venizelos could bring the Belgrade Government to his own way of thinking in regard to the various questions outstanding between the two countries. It has reluctantly to be admitted that no adequate answer can be given to the Croat indictment against the Serbs. Now that things have gone so far, it is unlikely that the present differences between the two peoples can be patched up. The experiment of a highly centralised State has proved a failure, and if the Yugoslav kingdom is to remain a single political entity, it will have to be on a federal basis. The attempt to prevent this solution may well lead to a worse state of affairs than now exists. Both parties desire that the kingdom should be kept intact, and both must have this end in view in any future negotiations. The lighter the ties that bind them, the easier will it be for both to continue to live side by side, while with the passage of time the quarrel of to-day recedes farther and farther into the background. That great sacrifices will be required of the Serbs to this end cannot be denied; their rehabilitation in the eyes of Europe will depend upon the readiness with which they show themselves prepared to make them.

Turkey and Europe.

Those who have wished to see Turkey benefit to the full by the reform movement that was introduced with the Republic will welcome the more accommodating spirit that the Angora Government has shown recently in regard to its financial obligations. Hitherto in the matter of reform accomplishment has lagged behind intention in many important directions owing to financial stringency. Making a virtue of necessity, the Government proclaimed its intention of relying solely on Turkey's own resources, and for a time it deceived itself and the people into believing that such a course was possible. When experience brought its disappointment in this respect, it was found that the Turkish attitude towards the country's foreign indebtedness effectually closed all the principal financial markets to Turkey. A new policy, therefore, was necessary, and it says much for the genuineness of the reform movement that there has been comparatively little delay in inaugurating it when once it was recognised as inevitable. Following the conclusion of the agreement with the foreign Bondholders, negotiations have now been begun for a settlement of the question connected with the Constantinople Municipality's loan of 1909. In spite of the strict provisions governing the service of this loan the Turkish Government defaulted, seizing the revenues that were pledged for the payment of interest. Further, the long-drawn negotiations for the purchase by the Turkish Government of the Anatolian Railway have been concluded. This railway runs from Haidar Pasha, opposite Constantinople, to Konia, with a branch from Eskishehir to Angora; it was in German hands, but was taken over by the Republic, and the shareholders have had to wait until now for a settlement of their claims. The line from Konia to Aleppo and Nisibin, it may be mentioned, belongs to the Baghdad Railway; the German shares in this company were handed over to the Reparations Commission under the Treaty of Versailles, but a settlement of the problem connected with this Railway, which is also administered by the Turkish Government, has not yet been reached. Together with the Anatolian Railway, the Turkish Government purchases the Adana-Mersina line, the shares of which were held by the Swiss bank which had also the shares of the Anatolian Railway Company.

Afghanistan's Path of Progress.

King Amanullah is finding it as hard to hold his country to the path of progress as it was for Rome to build a nation. The rebellion that has taken place appears to be confined to a single district; but from the spasmodic protests that have been raised in various quarters it may be inferred that there will be widespread sympathy in Afghanistan with those who dare to give practical expression to their opposition to the King's reforms. It is not easy to form an accurate idea of the gravity of the revolt of the Shinwaris; but from the fact that various Afghan representatives abroad are issuing contradictory statements, it may be inferred that the situation is bad enough to call for unreliable official versions. In a country of inadequate communications the advantage is with the rebels at the spot where they have chosen to launch their offensive, and initial successes may be expected. The strength of the Government's position turns on its ability to deal with the rebels before others in different parts of the country have had opportunity to be encouraged by their successes to follow their example. To this test King Amanullah has responded well; for in spite of the uncomfortable days through which Jalalabad has had to pass, he seems to have used to good effect and with despatch the advantages in the way of arms and aircraft with which his visit to Europe provided him. It will be of interest to see whether the revolt will raise in the King's mind the question of the advisability of proceeding more slowly in the path of reform. Mustapha Kemal Pasha has had more favourable ground to work upon in Turkey than King Amanullah has in Afghanistan. The temptation to subject the reform movement in the two countries to a time race is, no doubt, great, but the Afghan monarch can quite honourably refuse any such competition on the ground that he has a far more backward and fanatical people to hasten along the path-way of progress.

Armenia and Great Britain.

Once more, in the House of Commons last week, the British official suspicion of the Armenian National Home which is now being built up within the Soviet Union of Republics was made plain. For in answering Mr. Noel Buxton's question why the British delegate on the Fifth Commission of the Assembly of the League of Nations had voted against further advances of money being made to the Armenian refugees in Erivan—despite the fact that the German Government had agreed to grant £50,000, provided that four other Governments subscribed and the League of Nations was responsible for administering the expenses of the scheme—Sir Austen Chamberlain said that the British taxpayer had already subscribed heavily enough to Armenian relief, and also that the Erivan scheme had not received sufficient support to justify further British sacrifice. The Foreign Secretary also added that he had great doubts upon the possibility or the success of the scheme. We may take it, therefore, that any British official support of the Erivan Republic will be looked for in vain—at any rate while the present Administration is in office. Whether changes either in Russia or in Great Britain will involve closer British-Armenian relations it is impossible to say. But it appears to be unquestionable that it is to the Russian scheme that Armenians themselves, scattered about in different parts of the world, are looking for the regeneration of their race. Other solutions, however admirable from the point of view of expediency (and this is to see them in their most favourable light), do not seem to be regarded with much enthusiasm by the Armenian people as a whole. If Great Britain refuses officially to help a land within Bolshevik territory, there is all the more reason why unofficial admirers of the Armenian people should interest themselves in the Caucasian scheme. Without question in the next few decades very far-reaching material changes will be made on Russian territory, not the least of which changes may well take place in Armenia. It

is to be hoped, therefore, that in this great development the Armenian people will not lose their love of the West, which, even from a selfish point of view, would do well to keep in the closest touch with so gifted a race.

Palestine's High Commissioner.

Sir John Chancellor's first speech on Palestinian soil was admirably phrased. As we have already suggested, his interest in the development of the Holy Land has manifested itself at once. For in this speech he spoke of his intention to concentrate upon the development of the country's resources. He foreshadowed Government assistance for private enterprise, to increase the wealth of the inhabitants, and expressed the hope that common interests would lead to a common patriotism. In the summary of his speech the words "Arab" and "Jew" are not so much as mentioned; it is the future of the Palestinian people upon whom the High Commissioner lays so much stress. That, of course, is the resolute policy of His Majesty's Government. Of late the manifestations of the spirit of a common Palestinian citizenship have been rather distressfully lacking, and if such a spirit can be created—we will not here dogmatise on that score—certainly the economic method is the only way. Now even this economic method is full of pitfalls, for unless there be preserved the most scrupulous impartiality, the emphasising of Arab and Jewish characteristics, at the expense of the Palestinian conception, may result. There is no need to emphasise the point, which has illustrations too obvious to mention. But without question Sir John has struck the right note, and so long as the actions of the Administration are maintained at this true pitch, all may be well.

INDIAN NOTES.

The Commission at Work.

Apart from a few isolated demonstrations carried out mainly by students, of which the most is being made by the Indian Press, the Simon Commission's tour has, so far, provided little evidence of the boasted strength—either moral or numerical—of the boycott movement. The unfortunate incident at Lahore is discussed by a Parliamentary correspondent on another page of this issue. At Lucknow the police twice found it necessary to disperse crowds, and it is understood that in the course of the proceedings certain organisers of the demonstration—including Jahwarlal Nehru, the founder of the new Independence League—and some of the police were injured. Full details are not to hand but the facts in this case are perfectly plain. The processions were prohibited as is done in certain circumstances in this country and in every other civilised country, in order to prevent a breach of the peace. Notwithstanding the prohibition an attempt was made in defiance of the magistrate's order, to proceed with the procession. The ringleaders were prevented from carrying out their plans, but there is no evidence to show that more force was used than was necessary to see that the orders that had been given by the police authorities, in the same way as they are frequently given in this country, were carried out. Though the streets of many other Indian cities may yet be made to resound to the cry "Simon go back" before Sir John and his colleagues return in April, few any longer trouble even to maintain the pretence that the boycott attitude represents the natural reaction of "a spurned and humiliated people." The past few months have cleared the air. Time has brought about a reconsideration of first impulses with many of the Commission's critics. Only the Legislative Assembly, less representative than the local legislatures, and the Central Provinces Council still remain aloof; although the profusion of memoranda with which the Commission has been assailed suggests that the attitude of many of the members of both bodies towards the Commission's responsibilities is by no means as

negative as they would have us believe. It would serve no useful purpose to attempt to summarize the evidence submitted day by day by officials and non-officials. In due course the Commission will have to get down to the gargantuan task of appraising it, reconciling inconsistencies as best they may, and drawing from the masses of claims and counter-claims whatever guiding principles may be safely evolved.

The Indian Coastal Reservation Bill.

It is satisfactory to see that the Association of British Chambers of Commerce has entered a protest against the Indian Coastal Reservation Bill. This unwise and impracticable measure provides that at the end of a period of five years the coastal trade of India shall be reserved exclusively for ships a controlling interest in which is vested in British Indian subjects. It proposes, that is to say, to eliminate the existing European-controlled shipping companies in five years; and to make it impossible for any but Indian-owned vessels to engage in the coasting trade after that time. The existing companies are, of course, exclusively private enterprise. They are not aided, or subsidised, by the State in any way. They are simply well-managed British shipping companies who, by dint of many years of perseverance and hard work, have built up a great traffic. Indian shipowners, coming late into the field, naturally find the competition difficult. They see many years of striving in front of them, unless their European competitors can be driven out of the trade. They accordingly propose that the State should abolish this disagreeable competition, and leave the field clear for them. As the writer of a recently issued pamphlet on the subject puts it, what they really say, in effect, is: "The victory will be ours immediately the enemy are ordered to quit the field of battle." The Bill is a good example of the kind of legislation that the Associated Chambers of Commerce of India have asked may be made impossible under the new Indian Constitution; and we are glad to see that the Association of British Chambers has definitely endorsed this request. The sponsors of the Bill contend, of course, that it is not a discriminatory measure. But this contention cannot be sustained, seeing that the whole object in view is to drive out the European concerns and to confer upon Indian-owned vessels a legal, and commercially unassailable, monopoly. Not only is such a proceeding unfair to the existing companies, who would receive no compensation, but it would not be to the advantage of any Indian trade, and it would not foster any Indian industry. Indian investors would almost certainly

THE PROBLEMS OF SYRIA.

Of all the mandated territories of the Middle East which in their turn, or at the same time, have suffered or are suffering from the non-solution of political and economic problems, Syria, probably, is the most unfortunate. To take the question of frontiers first. Iraq's borders are (with the unimportant exception of the Syrian frontier) settled, Trans-Jordan's borders are settled (even though the question of Aqaba and Maan be only a provisional settlement, not recognised by the Wahhabi King of Hijaz and Najd), and Palestine's borders, of course, are settled. Alone of these Arab countries Syria remains in suspense over her frontier with Turkey. From the internal political point of view, again, there is in Iraq, Trans-Jordan, and Palestine, if not acquiescence in, at least an unperplexed attitude towards, the arrangements that have been made for the governance of the three countries. Opposition to the existing régime exists, of course, in varying degrees of intensity in these States, but the problem raised by whatever political hostility there is does not appear to present a problem of immediate capital importance. In Syria, on the other hand, the question of the Constitution and of the Mandatory's relations with the peoples in tutelage remains in a state of acute suspension. And thirdly, while of Iraq and Palestine, at any rate, it may be said that the economic prospects are not bad, from Syria come the gloomiest reports of the development of the country and of the prospects of prosperity. Now to the problem of the Syrian-Turkish frontier we have devoted some attention in recent issues of THE NEAR EAST AND INDIA, and our readers will not need to be reminded of the stubbornness which the Turks are showing in the matter. In spite of the good will manifested in France towards the Turks—and a study of the French Press reveals a very evident willingness to come to a good understanding with Turkey—the negotiations between French and Turkish representatives have proved abortive. Presumably, therefore, the raids, the brigandage, and the smuggling over this frontier between Nisibin and Jazirat ibn Omar will continue. The danger of such a continuation, however, is self-evident. Tempers are rising both in Turkey and in Syria, and relations between the two States grow daily more delicate. It is to be hoped, however, that the statesmen of Angora, who, by the way, did not let the indignation of certain Turkish deputies over this matter of the Turco-Syrian frontier stand in the way of the ratification of the agreement in regard to the Ottoman Debt, will eventually see, as in the case of Mosul, that they cannot indefinitely run their heads against a brick wall.

The internal political problem of Syria, although more publicity has been given to it, is perhaps a less hard nut to crack than the problem of Turco-Syrian relations. The more one studies this problem, the more one sees how

the delicacy of the situation arose through the Nationalists' overstepping—many of them, no doubt, unconsciously overstepping—the bounds which the Mandatory Power had previously and inevitably set up. For it should be remembered that two months before the Syrian elections, which, to judge by their results alone, were conducted in an atmosphere of unprecedented freedom, M. Ponsot, High Commissioner, publicly declared that the purpose of the Constituent Assembly was to draw up a Constitution within the limits imposed by France's responsibility as a Mandatory Power answerable to the League of Nations. That the elected Syrians exceeded these limits was not unnatural, but it was unfortunate for the immediate prospects of Franco-Syrian political co-operation. There would seem, however, no need to despair of an ultimate working agreement, if not solution, for in the weeks intervening between the present time and next February, when the prorogation of the Parliament is due to come to an end, realisation of the hard facts of the situation will surely have sunk more comprehensively into the expectant minds of the Syrians, and a way out will be found.

But it is at the economic aspect that one takes a certain alarm. If the gloomy accounts which have been published from the Lebanon concerning the commercial plight of the French mandated territory are correct, something must soon be officially done to relieve an intolerable situation. In part, of course, what is Syria's loss is the gain of her neighbours, this fact being due largely to the artificial barriers and the consequent Customs barriers between the various Mandated States carved out of the Ottoman Empire. Beyrout, for instance, which in Ottoman times used to be the chief medium by which the interior of Syria (including Palestine and Trans-Jordan), Mesopotamia, and a part of Anatolia obtained European goods, has suffered a severe loss of this trade, part of which finds its way *via* Haifa or Mersina. Nor is the agricultural outlook any rosier. Like the farmers of Trans-Jordan, the farmers of Syria have been very badly hit by the quantities of cheap wheat imported from places like Australia, India, or America. What is being done to help the native grain-growers thus driven out of a living? Little enough, in all conscience. The French authorities suffer sadly, admittedly, from a lack of funds, and there has yet been no loan issued on behalf of Syria. Presumably such a loan will be delayed until the Syrians set up a staple Government. But the position is a peculiarly trying one. That Syria, a wheat-producing land *par excellence*, should have to import foreign grain for its daily bread, is, indeed, something of a tragedy. It has been calculated that, because Syria has now so little to export, of the forty million gold pounds which existed therein at the close of the War, but four millions are left. Nor is it only gold which is leaving the country. In 1926 about 12,000 Syrians and Lebanese emigrated from the land; in 1927, some 15,000; and this year it is anticipated, the number of emigrants will have increased to 20,000. We do not choose to allocate blame for this unhappy situation; certainly the French are not wholly to blame for the economic pass to which their charge has come. The Allied Powers cut up the Arab territories from the Ottoman Empire, and theirs, primarily, is the responsibility for the economic hardships which the inhabitants of those territories have now to endure. It may be that a time will come when all Customs barriers within Arabia are swept away; but in the meantime concentration will have increasingly to be made on schemes of irrigation, improved methods of agriculture, and other means of developing the land, which must always be the basis of whatever prosperity Arabia may boast. If the attention of the civilised world is called to Syria, it is not likely to stop short at the boundaries which for the most part statesmen in Paris laid down for that land, but will surely comprehend the responsibility which lies at the doors of the West for doing its utmost to provide means of livelihood for those Arabs whose mode of life was so rudely, even fundamentally, disturbed by the processes of the War and of the subsequent peace.

*The Near and Middle East

From Our Own Correspondents.

Sofia, November 29.

Belgrade and Bulgaria.

The avalanche of false information which has been spread from Belgrade during the last few days upon affairs in Bulgaria has drawn the attention of Europe to the situation here, which is represented as being precarious.

In fact, the position has never been so well established, and so remote from the wishes of the dreamers of trouble. Absolute calm prevails here. Even the different sections of the Democratic Entente are making up their differences, partly as a result of the encouragement afforded by the results of the municipal elections. It is true that, in addition to the organs of this group, of which one, the *Démocratitcheski Sgovor*, is regarded as the Government's mouth-piece, but of which others, the *Slovo*, the *Mir*, and the *Préporetz* express rather the diverse views of fractions of the Group, a new journal, the *Latch*, which will express the particular views of the Tsankoff group, will shortly appear; but it is an error to think that the appearance of the journal involves the dislocation of the Democratic Entente. On the contrary, even the friends of M. Tsankoff state that the journal will advocate union and concord in Parliament and country.

Inter-Party Relations.

Relations between the parties in Parliament and in the country are still more reassuring; for they not only reveal a remarkable détente between the Government and the Opposition but also display a wise attitude of patience—the attitude of M. Malinoff, the head of the Government of to-morrow, who exercises prudence towards his Agrarian friends. This repugnance of M. Malinoff formally to bind himself to allies who might be hurtful when he is in power, only reinforces the position of the Cabinet, wherein M. Bouroff, Foreign Minister, and M. Tsankoff, President of the Sobranye, have abandoned their intention of September to provoke a new crisis, having obtained full satisfaction on the subject of the attitude to be adopted towards the revolutionary Macedonians. There again, the Government is stronger than ever, having the support of the whole Parliament in its decision to respect the laws and the authority of the Bulgarian State throughout the territory of the Kingdom. Parliament has indirectly approved the energetic measures in question, which were taken in perfect accord with General Volkoff, Minister for War, who was generally represented as the friend and protector of the revolutionary Macedonians.

The I.M.R.O.

Moreover, the détente already mentioned between the parties extends to the revolutionaries themselves. Since the assassination of General Protogueroff, ordered by his young rival, Ivan Mihailoff, the Macedonian Organisation has been divided into two opposing and approximately equal camps. But in the struggles which have followed, the partisans of Mihailoff have gradually gained the upper

hand. From this very fact the inter-Macedonian struggles have begun to diminish, in spite of the efforts of interested parties to envenom relations. But the process of appeasement was checked by certain acts of aggression such as that which occurred recently in the centre of the capital, before the "Phoenix" confectionery, and certain murders such as that of the former Chief of General Security, Narum Béleff, a Macedonian of Ochrida, who suffered death at unknown hands. And as, between times, a German agency published an old interview with Mihailoff who explained the conditions in which the Department of Petritch existed—the portion of Macedonian territory annexed to Bulgaria—and threatened to make even Sofia a base of operations against the Government if it were to indulge in oppression of the revolutionaries, there has resulted a recrudescence of hostility over the Macedonian question. At this moment it was that the defamatory campaign of Belgrade began, talking of a mobilisation of revolutionary troops of Mihailoff for an attack on the capital, imaginary fights between partisans of Mihailoff and partisans of Protogueroff, and a population alarmed at the prospect of civil war, opening up the possibility of a foreign invasion under the fallacious pretext of suppressing a centre of troubles and of preserving the Balkans from an extension of Macedonian hostilities. What was the real object of this campaign?

It is difficult to give a precise answer. Here it is said that it was an attempt of Belgrade to influence, and if possible to prevent, the issuing of the Bulgarian loan for stabilisation, for which public subscriptions were at this time being asked. In any case, if it did wrong to the credit of Bulgaria in the eyes of foreign subscribers, it has on the other hand opened the eyes of the Macedonian revolutionaries to the fatal effects of their struggles, which have benefited only the adversaries of the cause of Macedonia and weakened the power of the redoubtable Revolutionary Organisation. Confronted with the persistent animosity of Belgrade, Macedonian patriots have understood that the best method was to silence their internal quarrels, and the rival partisans are now coming together.

Thus the only appreciable result of the anti-Bulgarian campaign of Belgrade has been to embroil the relations between Bulgaria and Yugoslavia at a moment when, as I have previously noted, relations with Turkey, Greece, and Roumania were distinctly improving.

CYPRUS.

Nicosia, November 28.

The Greek Archbishop's Meeting.

On November 17 the "ecclesiastical and political leaders" of the Greek community met to consider the question of a rejoinder to the reply of the Secretary of State, in June last, to their last memorial on the subject of union with Greece. It was decided by a majority that it is not advisable to submit a fresh communication, in the

first place because too long a time had elapsed since receipt of the dispatch, and also because replies had already been received on various occasions to similar memorials. This decision is more consistent with reason, and with a perception of political realities, than might have been expected. The futility of fresh memorials is clear, and would, moreover, indicate a disregard of the late pronouncement of M. Venizelos that he could not take up the matter, and also, it might be added, the advice of the best friends of Cyprus. It was intimated, however, that a more general assembly would shortly be held, at which the policy to be adopted by the Greek community would be discussed. Supporters of the movement for "union," including members of the Greek Press, regard the resolution arrived at as weak and unsatisfactory. They argue that an entirely new campaign is needed, in which the "just claims" of a Greek majority—five-sixths of the inhabitants—would appeal more forcibly than hitherto to the British Government, House of Commons, Press, and people; and, if possible, to bring their case before the League of Nations. Their deputations have, they say, hitherto lacked courage and vigour in urging a reconsideration of their appeals. This is certainly not the case, for the claims and aspirations of the Greek leaders have been fully and ably stated on various occasions, notably in 1923, when the Duke of Devonshire was Secretary for the Colonies, and informed a mission emphatically that the "question" was closed.

A Link with Hellas.

Regret is expressed at the ports that a small steamship, the Alcmena, which has been plying between Greece and Cyprus, chiefly through the generosity of a Greek, M. Kyriakides, may have to cease running, owing to want of support by merchants and shippers. The vessel was not inaptly named; for, like her namesake of Greek mythology, she has had a chequered career. Alcmena, however, had many lovers human and divine, including Zeus

himself—by whom she became the mother of Hercules—one of whose seats was the Cypriot Olympus (Mt. Troodos). Finally she was brought, under his protection, to an "island of the blest." Hope is expressed that the modern Alcmena may still be spared to connect Hellas with this favoured island.

General News.

There have been abundant rains, and the agricultural outlook is favourable. Ploughing and sowing of cereals proceed throughout the island.

The Budget for 1929, contemplates the expenditure of £614,682. The Police vote is for £97,285.

A campaign is to be undertaken to fight a serious disease attacking olive trees. To meet part of the cost a tax of one piastre—rather over 1d.—is to be imposed on owners for every tree, whether grafted or not.

Cairo, December 1.

The Sinai Peninsula.

The High Commissioner and Lady Lloyd leave on Monday next for a visit to the Peninsula of Sinai. They travel by car to Suez, thence by steamer to Abu Zenana, whence they motor overland to the celebrated convent of St.

Catherine at the foot of Gebel Musa on the summit of which local tradition has it Moses received the Ten Commandments. The convent itself is full of interest. Built about the fifth century by Justinian for the protection of the monks who lived in the area, it originally had no ground entrance. Everyone had to be hoisted up by means of a basket, so as to make it difficult for marauders to attack the place. To-day it has a really good modern entrance, and its walls enclose many priceless relics, among them the descendant of the Flaming Bush, the famous Codex Sinaiticus, and innumerable unique manuscripts. Lord and Lady Lloyd will approach the monastery from a different angle from that which presented itself to Lord Allenby, who, when he paid his visit in 1922, landed at Tor and made his way across country by camel as the patrols do. But their Excellencies will none the less receive an excellent impression as they see the mediæval fortress which the convent resembles from afar. Indeed, situated in a hollow at the foot of granite mountains, this unique building with its garden replete with every tree, vegetable and fruit from tropical and colder climes, makes a most attractive picture against the barrenness of the surrounding landscape.

The High Commissioner, after inspecting the place, will return by car to Abu Zenana, and thence go by steamer as far as Kosseir, whence he will travel overland to Kena and Luxor, being back in Cairo on December 11. King Fuad intends himself to visit the same region later in the year, and already preparations, such as improving the roads, are in progress. Most of the King's visit will be to the country above Tih, the huge barrier, which separates the northern sandstone area from the southern or granite region. Nevertheless, as King Fuad will eventually visit the convent, the Residency party will no doubt benefit from these preparations part of the way.

[It has to be inferred that, owing to the sudden return to England of the Prince of Wales, this trip to the Sinai Peninsula has had to be postponed.—ED.]

New Hospital at Abbassia.

On Saturday last the Premier, Mohamed Mahmoud Pasha, laid the foundation stone for a new Government hospital out in the suburb of Abassia. The latter has of late years grown enormously in size. Twenty years ago it was very sparsely provided with homes. There were large gaps of desert in its midst, and it was separated from Heliopolis, when the latter was created, by a huge desert area. To-day it has been entirely overbuilt and has completely joined up with Masr El Guedida, as Baron Empain's venture is called. Indeed, next to Bulac it must be the most densely populated suburb of Cairo, and as the capital now has a population of over one million compared with 650,000 two decades ago, it can be understood that it has become increasingly difficult to serve this suburb from Kasr El Aini, which is at the southern extreme of the city. The Government has for some time been thinking of erecting a new hospital near Abbassia, but the initiative has been taken out of its hands by one of the best known Egyptians, Shaikh Abdel Rehim El Demerdashi, who, on behalf of himself, his wife and his daughter, laid before the authorities a proposal by which they gave the land for a hospital to be built at Abbassia together with the sum of £E100,000 for cost of erection and maintenance, the only condition they made being that all three should be buried in the grounds of the new hospital. The Government readily accepted this generous offer, and the ceremony of laying the foundation stone took place as mentioned on Saturday last. In token of British recognition of the Shaikh's life-long friendship for Great Britain the High Commissioner accepted an invitation to be present.

A munificent gift for a public object like that of Shaikh El Demerdashi is quite without precedent in this country, where public spirit of this nature is as yet an unknown virtue. It is to be hoped that this noble lead will be followed by the many other rich Egyptian notables.

The Vicomte D'Aumale.

The news that the Vicomte D'Aumale will vacate at the end of the year the position of First Secretary to the French Legation here, which he has held for the past eight years, will cause deep regret not only among his own countrymen, but also in the other communities, particularly the British community. During the whole time that he has been in Cairo, M. D'Aumale has been a tower of strength to his chief, M. Gaillard, himself a worthy successor to the many illustrious Frenchmen who have represented the Quai D'Orsay at the Court of Abdin, and he has particularly seconded him in his efforts loyally to carry out the spirit as well as the letter of the Entente Cordiale in regard to Egypt, while at the same time fully defending the interests of their own country. Our regret at losing M. D'Aumale and his charming wife is tempered by the knowledge that he is receiving well-merited preferment, and we draw some slight consolation from the fact that, as they are to be posted to Jerusalem, where M. D'Aumale will act as Consul-General, we shall have some hope of periodically seeing them amongst us on their way to and from the Holy Land.

The Wafd and the London Press.

The Wafd is much upset at the accounts sent home by the representatives of the London Press of the excellent reception received by the Premier during his tour of the various provinces, an account which has differed very much from that served up by its Press for the delectation of its followers. The latter have been variously told that there were no crowds such as had been reported, that the crowds to which the Liberal Press referred were entirely made up of ghaffirs brought in from all parts and dressed up to fill the part of fellahin, that in Samannud (the constituency of Nahas Pasha) where much was made of the reception given to Mohamed Mahmoud Pasha, there were only half a dozen ghaffirs present, and that the speech of welcome was stopped by prolonged ovations in favour of Nahas Pasha, and so on.

Not content with that, the principal Wafd organ now proceeds to accuse the representatives of the Press of having received definite sums of money from the responsible authorities—which, it says, would explain the favourable nature of their accounts of these receptions. That the Wafdist Press should endeavour to prove that these accounts were entirely erroneous, one can perhaps understand, even that they should accuse representatives of the rest of the Egyptian Press of taking bribes in this matter. But that they should go the length of placing the London Press on the same level by accusing their representatives of also taking bribes shows a complete misconception of the difference between the Press of London, which is notoriously independent of Government influence and that of Cairo, which, on the contrary, is generally subsidized. No one in this country believes for one moment that Englishmen can as a body be bribed, and it is to be feared for its own case that the enormity of the latest accusation made by the Wafdist Press is not likely to further, in fact is likely to discredit, its attempt to mislead its readers in regard to the success which has attended the Prime Minister's tours of the country. This latest manoeuvre of the Wafd is a demonstration of the foolish and incapable manner in which its propaganda is now conducted.

EGYPTIAN GOVERNMENT.

EGYPTIAN GOVERNMENT. FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of LECTURER IN ZOOLOGY.

The salary offered is from £E700 to £E800 per annum according to qualifications. The appointment will be in the first instance on contract for three years, subject to cancellation on three months' notice being given on either side.

Travelling allowance, equivalent to one month's salary, will be paid to the successful applicant if resident in Europe.

Applications should be addressed to The Dean of the Faculty of Science, Egyptian University, Cairo, and should be received before January 1, 1929.

Tirana, December 2.

The Constituent Assembly.

Yesterday the astonished population of Tirana learned, from the firing of twenty-one guns, that the Constituent Assembly has ended its labours. The new constitutional statute of Albania has just been finished. It contains 230 Articles, and gives unrestricted rights to the Sovereign.

But what gave more joy to the members of the Assembly was that, by a decision taken by them, the Assembly is transformed into a Chamber of Deputies, and everyone, therefore, remains *en place*. Before taking this decision the Assembly was careful to increase by two hundred francs a month their payment—their *meash*, as it is called here. And so, with neither new elections nor even the shadow of an electoral campaign, still less political parties, the elected of the people of last August (that is to say, the persons nominated by the Government) keep their mandate—in other words, they remain in power.

The New Regime.

Monarchical Albania has just regularised her relations with all the Powers, except Turkey, who refuses to recognise the change. For this reason, the Turkish Minister at Tirana, Tahir Lufti Bey, has left for Angora, and Albania is represented in Turkey only by a Secretary-Chargé d'Affaires.

The other foreign representatives have in turn presented their new Letters of Credence. Yugoslavia was the last, but she also has resumed official relations.

The Press.

There are at this moment two daily journals in Albania: *Shekulli i Ri* ("The New Century"), and the *Gazeta e Re* ("The New Journal"), which appeared in Tirana a month ago. The second of these journals is printed at the expense of the Government, and is edited by the Press Bureau of the Minister of Foreign Affairs; while the first is the organ of the cigarette Company, "Stamles."

The *Telegraph* (thrice weekly), which was considered to be the most independent political sheet, was suspended last October, and its Editor, Chekrezi, was brought before the political tribunal for having said that after the Constituent Assembly there would be elections for the Chamber of Deputies and that, as for the formation of political parties, Ahmed Zogu was no longer President of the Republic and head of the Government, but King, and therefore Sovereign of the country, without distinction of party.

NEWS IN BRIEF.

Spain has formally recognised the new régime in Albania.

King Fuad returned to Cairo on December 5 from Alexandria.

Heavy floods at Smyrna have resulted in damage to many houses, and the total destruction of others.

The members of the Commission on the Aswan Dam Project were received in audience by the King of Egypt in Cairo on December 6.

M. le Vicomte d'Aumale, Counsellor of the French Legation in Cairo, has been appointed French Consul-General in Palestine. M. Jean Lescuyer will succeed Vicomte d'Aumale at the Cairo Legation.

Colonel Maximovitch, Professor at the Yugoslav Military Academy, has been appointed to be Governor of Zagreb. M. Zreletz, the Governor, whom he succeeds, is being placed on the retired list.

Bulgarian Agrarians, displeased at the postponement of the official answer to a question about the alleged ill-treatment of one of their number by the police, made a demonstrative exit from the Sobranje on December 5.

In the presence of Queen Marie and Princess Helena, the young King's grandmother and mother respectively, the premises of the Feminist headquarters in Roumania were opened in Bucharest on December 3.

M. Bouroff, Bulgarian Minister of Foreign Affairs, and M. Moloff, Minister of Finance, arrived last week at Geneva to express their thanks to the Financial Committee of the League for its aid in arranging the Bulgarian Loan. They are representing Bulgaria at the coming session of the Council of the League of Nations.

Major-General Sir Frederick Maurice, Professor of Military Studies, at King's College, Strand, W.C.2, lectured on December 10 on "The Relations of the Campaigns in Palestine to the General Strategy of the Great War." On December 17 his subject will be "The Battle of Gaza-Beersheba." The chair at the first lecture was taken by Field-Marshal Lord Allenby. Admission to the lecture next Monday is free, without ticket.

At the Annual Dinner in London recently of the British Serbian Units Branch of the British Legion, the suggestion was made by the President, Dr. Hutchison, that at the next dinner children of members who were old enough should be allowed to attend, seated at a centre table, that afterwards they should all gather round a charcoal brazier in the dark, while a Serbian *guslar* (a bard) told stories of the Great Retreat and other incidents in the War. Thus could the children learn the true importance of international friendship.

Vice-Admiral B. S. Thesiger, C.B., C.M.G., Commander-in-Chief in the East Indies, has been making a cruise in the Persian Gulf on board the *Triad*, the ship of the Senior Officer in the Gulf, Captain Hector Boyes, C.M.G. The places he has visited have included Basidu, Bahrain, and Bushire. The *Triad* returned to Basrah on December 2, where the Vice-Admiral returned to his flagship, the *Effingham*, which is due to leave to-day (December 13) to continue her cruise.

Lieutenant-Colonel Frederick Grey, Inspector of Messing in India, returns to England in January on eight months' leave, after which he will vacate his appointment. Lieutenant-Colonel Grey served 20 years before being commissioned as Quartermaster of the 2nd Battalion The Royal West Kent Regiment in 1912. After the War he was transferred to The King's Shropshire Light Infantry, and posted to India to organise the messing arrangements of the troops there.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 22.

The Viceroy.

The Viceroy has been to Patna to open the new Science College, and there, nominally addressing the Vice-Chancellor, the Principal and staff, and the students, he used words directed to a wider audience. "The truth is," he said, "that public opinion, or indeed any individual mind, can never have before it more than a fraction of the relevant data in the light of which complete judgment can be formed. We all, I suppose, have only a limited number of categories into which we tend to thrust the impressions produced upon us by everyday experience. These categories form a picture to which we are constantly tempted forcibly to accommodate facts. Yet facts are stubborn things and are apt to rebel against such treatment, but none the less we continue the attempt, and public opinion, therefore, is frequently not so much a judgment of facts as a particular version of them. Many persons, too, are prone to want to have their thinking done for them and to trust too readily to the printed word and to current catchwords and phrases."

There is Oxford speaking, as I believe Oxford has not been heard to speak in India since Lord Curzon left her shores. There is, of course, a greater evil than the evil of men who, though they had but a fraction of the data before them, formed judgments, and spent the rest of their public lives in acting upon them as with the assurance that they were complete judgments—the evil of an unbridled spirit of intrigue. It would need, it must be admitted, a voice still braver than that of Oxford to speak in India of this rage of intrigue. It should be the subject of a page or a chapter of the Simon Commission's Report; but will it be? Until there is a public opinion that will not tolerate unbridled intrigue, a public opinion that remembers that "the King's Government must be carried on," which means also that the Opposition should be self-governed, self-restrained, what hope can there be for the democratic institutions that the Viceroy had in mind when he said: "There is no necessity to emphasise the importance of public opinion in any country, especially a country in which democratic institutions are in the process of formation." You cannot work democratic institutions—so the Simon Commission should report—until there is a sufficiently sound and strong public opinion, and among Indians there is no sufficiently sound and strong public opinion because of their deep-seated vice of intrigue.

Lala Lajpat Rai.

Lala Lajpat Rai, whose death India is now mourning, was a man who stood above intrigue; one of the few of his generation who did. He had his limitations certainly; he cannot be said to have searched for the truth as Oxford bids her sons search for it; they say that, in the Legislative Assembly, he never spoke but one speech, and that the speech of a partisan. The truth is, he had not a powerful intellect. He was not self-seeking, but public-spirited, and what he had convinced himself were the evil consequences of the British-India alliance were all that his passionate eyes could see in politics. He did sounder work outside politics. Mr. Gandhi writes thus of him in *Young India*: "His love of service was insatiable. He founded educational institutions. He befriended the depressed classes. Poverty, wherever found, claimed his attention. He surrounded young men with extraordinary affection. No young man appealed to him in vain for help."

To secure an enlightened and strong public opinion, that indispensable basis of democratic institutions, it is not enough, however, to found schools and colleges. Men must be found to teach in them. I had it in this room the other day from a young Bengali that the Indians among the professors at whose feet he had sat had none of them possessed the capacity to teach. "Why is it, sir," he

asked me, "that they none of them can teach?" "They may know their subjects," he went on, as I did not answer, "but they cannot teach." I did not need anyone to tell me that Indians conspicuously lack the capacity to teach. The same lack of sheer weight of intellect that made it possible that a man of no more weighted a mind than Lala Lajpat Rai possessed, should be a great political leader—that same lack, or a still greater degree of it, makes it impossible for a man to excel as a teacher. One has never heard of an Indian of our time so excelling. The country has had great religious teachers—in the past.

The European Association.

The annual meeting of the Calcutta branch of the European Association was held on Monday, when the President of the Association, Mr. Chartres, who has visited all the thirty branches scattered up and down India, drew an interesting contrast between the average Calcutta man's concern for politics and the much keener interest of the European up-country. Politics are never brought very close to the Calcutta merchant and his assistants, while they are a very lively concern to the man up-country, and every year become a livelier one. This is shown by the figures of membership of the different branches. Mr. Chartres knows of one up-country branch, where the actual membership is ninety-five per cent. of the possible membership, while all that the Calcutta branch can boast is that this year the new members enrolled outnumber the old members lost. However, when money is the need, it would appear that Calcutta can be relied on to attend; for the whip round for money to defray the expenses of representing the European case before the Simon Commission has drawn Rs.43,000 from Calcutta, exclusive of Rs.4,200 from the jute mills, and Rs.11,550 from the tea agencies.

Mr. Chartres is President of the Association. Mr. W. H. Thompson, who presided over the meeting as President of the Calcutta branch, also spoke. The *Statesman* has a leader this morning on the subject of a portion of Mr. Thompson's speech, beginning as follows: "In a somewhat pessimistic speech at the European Association meeting Mr. W. H. Thompson seemed to give a measure of adhesion to the suggestion that at some future date the British may hand over India with the exception of Bombay and Calcutta, retaining these under their own administration. The proposal is not altogether new. It was explored in our columns about four years ago, and since then it has found support with a few Europeans. We believe it to be wholly and absolutely impracticable."

Indian Road Development Committee.

The Indian Road Development Committee has presented its Report in a document of over a hundred and fifty pages. The main recommendations are that there should be additional taxation on motor transport, including two more annas on motor spirit, vehicle taxation, and licence fees for vehicles plying for hire. The additional two annas on motor spirit, it is estimated, would yield sixty-two lakhs. A Central Road Board is not recommended, the Committee preferring a Standing Committee on Roads of the Central Legislature, and a periodical Road Conference at which interested parties would be represented. Strong emphasis is laid on the need for road development in India, in particular: for the better marketing of agricultural produce; for the social and political progress of the rural population; and as a complement to railway development.

Lieutenant-Colonel Thomas S. Whitworth has succeeded to the command of the 3rd Battalion 2nd Punjab Regiment, in place of Lieutenant-Colonel T. Luck, who has vacated. The new commandant was formerly in The East Yorkshire Regiment, and on transferring to the Indian Army was posted to the 72nd Punjab, the old title of the present battalion. He served in Egypt, France, Afghanistan, and on the North-West Frontier, and was a brigade major and a G.S.O.2 in India. Major E. G. Howlett, M.C., will be his second-in-command.

INDIA IN PARLIAMENT.

Interest in Indian affairs in Parliament last week centred mainly in the Upper House, when practically a whole day's business was devoted to their consideration. It began with a request from Lord Clwyd for information regarding the appointment of the usual Standing Joint Committee on Indian affairs. Although it was true, he admitted, that no questions had been submitted to the Committee last year, the House would, he thought, agree that it was none the less desirable that the machinery of the Committee should be put in motion and the Committee appointed. There was, moreover, the intention implicit in the procedure laid down for the consideration of the Simon's Commission's report to refer the considered proposals to such a body.

In reply, the new Secretary of State explained that the Government were entirely of the same opinion, and that the only reason why a Motion had not been put down before was that some delays had occurred in connection with the personnel of the Committee. Lord Peel's promise to proceed with the question without further delay was implemented the following day, when the necessary Motion was moved and agreed to, and it was ordered "That a Message be sent to the Commons to acquaint them therewith and to desire their concurrence."

Many keen students of present-day Indian political and constitutional problems have been wondering how the findings of the Butler Committee, which will shortly be available, are to be co-ordinated with, or dovetailed into, the framework of the Statutory Commission's wider inquiry. The problems under examination in each instance are so intimately related each to the other as to make it not only desirable but essential that they should be considered together. But they are in point of fact actually under inquiry by two separate and distinct bodies. As *THE NEAR EAST AND INDIA* pointed out in May last, "it may be possible so to widen the terms of reference to the Simon Commission as to enable it to deal, in consultation with the Indian States Committee, with questions affecting the States. Or if this is impracticable the appointment of still another Commission may be a possible way out of the difficulty. But some means of co-ordinating the work of the two investigating authorities must undoubtedly be sought and found." To elicit some indication of opinion on the point from the responsible authorities was, no doubt, the object of Lord Olivier's subsequent Motion.

Although the ex-Secretary of State for India, replying on the debate, congratulated himself on having been the means of eliciting from his successor "such an interesting, important and considered statement," we cannot altogether share his satisfaction at Lord Peel's reply. That on the receipt of the Butler Committee's report the Government "would have to proceed to whatever consideration might be necessary either of the question as to the relations between the paramount Power and the States or the question as to the relations between the States and British India" was patent. Lord Olivier's question was whether the Government had in view any scheme for dealing with matters arising with regard to the Indian States concurrently and consistently with future amendments of the Constitution of British India. While we agree that to formulate anything in the nature of a cut-and-dried scheme at the present juncture would be premature, we think that Lord Peel might have indicated more precisely the lines on which "endeavours are being made to look ahead and examine into these difficult and complex questions."

Although the obviously exaggerated accounts of the clashes between the police and the boycotters on the occasion of the Simon Commission's arrival at Lahore and other centres carried their own refutation, the India Office was well advised to make the actual facts as widely known as possible. The charge, for example, has been freely made in the Indian Press and at public meetings that the

death of Lala Lajpat Rai was directly attributable to the rough handling he received from the police.

In reply to several questions on the subject in the House of Commons recently, Lord Winterton said that he was aware that Lala Lajpat Rai had made a statement to the Press to the effect that he had received two blows from a police officer on the occasion of the demonstration at Lahore on October 30. Two enquiries had been conducted into the conduct of the police on that occasion—the first held departmentally immediately after the occurrence, and the second, a public inquiry, held in the Town Hall, Lahore, by the Commissioner of the Rawalpindi Division.

Although in view of the forthcoming debate in the Punjab Legislative Council, the Under Secretary of State preferred to make no detailed statement as to the facts elicited by the inquiries, he made it plain that no evidence had been produced to support the allegations. The general of the investigations, he added, was to establish the fact that while pressure from the large crowd behind did necessitate the use of some force by the police to prevent their line being broken, and consequently some slight injury resulted to the persons in the front ranks (a position occupied by the late Lala Lajpat Rai) there was no deliberate or unprovoked attack by the police, and no individual was singled out for assault.

Replying to supplementary questions, Lord Winterton explained that the incident arose out of an illegal procession which was forbidden by the police, and repeated that no more force was used than was necessary to restrain the crowd from breaking through the barricades and possibly assaulting members of the Commission.

In a written reply to a question Sir Samuel Hoare made the welcome announcement that an agreement had been reached between the Persian Government and Imperial Airways about the establishment of bases in Persia for the Air Service between Great Britain and India, and that the relevant documents would probably be signed last week.

THE INDIAN CIVIL SERVICE (Retired) ASSOCIATION.

Memorandum to Simon Commission.

The Indian Civil Service (Retired) Association, a body comprising some 350 ex-officials of that Service, has addressed to the Simon Commission, through its President, Sir Reginald Craddock, a representation on the subject of possible or contemplated changes in the political constitution of India. The representation is warranted, in fact even demanded, by the Association's accumulation of Indian experience and knowledge and the Commission has, it is understood, acknowledged its obligation in the matter.

The memorandum disclaims any wish to traverse the whole ground of political reform in India or to attempt to devise any constitutional scheme. The gist of the representation is that, whatever political changes be contemplated to gratify the legitimate aspirations among the educated classes in India for an increasing share of power, the maintenance of the British element in the administration is absolutely essential for the welfare of the vast masses of the population.

Many Indians in this and other British Services have assimilated their traditions and adopted their high standards of duty, as the Association recognises with pride, but the maintenance of these high standards depends and must for long depend upon the continuance of the impartial British element. It is in part the inherence of such standards in the British governing class, partly their detachment from racial rivalries, conflicts of creed and caste, and the struggle of hostile sections for place and power, that creates the general belief in their impartiality and popular confidence in their integrity, quite apart from any question of efficiency. Reduction of the

British element, either in numbers or authority, weakens the administration both directly by cutting down its more efficient part, and indirectly by diminution of the strength that element supplies to its Indian colleagues. And a serious weakening of the administration would be disastrous to the great masses of the people of India. It would not really benefit the classes who are looked to as the inheritors of British rule.

The essential importance of maintaining the high standard of Indian Administration, is, in the Association's view, the crux, in fact, of the present situation. The memorandum goes on to describe in outline the limits within which the Civil Service must continue to be constituted. The Security Services, the Indian Civil and the Police, should not be Indianised beyond the standard accepted by the Lee Commission; even that, it is contended, is perilously low. The Civil branch of the Indian Medical Service should be definitely included among the Security Services, for which requirement the authority of Mr. Montagu is quoted.

In other Services, as the Lee Commission recognised, recruitment of British experts must be regarded as essential. This applies to the Public Works, the Forests, the Education Department and perhaps some others. In these the Association suggests the British proportion should be substantial and should continue to enjoy "All India" status, that is, should not be locally controlled. Finally, in the matter of Service and Family Pensions the present statutory control of the Secretary of State, it is submitted, should not be relaxed without adequate security for the liability being fully met. This, indeed, is a responsibility which no British Government could with honour disregard.

INDIA AND THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL.

Referring to our note, in last week's issue, on the question of the establishment of a Supreme Court of Appeal in India, a Parliamentary correspondent writes:—

"The proposal for the establishment of a Supreme Court to which you referred in a recent issue has an important bearing on the question—which is now before the House of Commons—of the appointment of two additional members of the Judicial Committee of the Privy Council. For a long time past it has been the practice for the Committee to include one member, or sometimes two members, with practical experience of the administration of justice in India. But these members—who are not Law Lords—have always been, and still are, most inadequately remunerated.

"The present proposal is that two more members, with, of course, Indian experience, should be appointed on a yearly salary of £4,000 each. Half of this amount is to be paid by the Treasury, and the other half by India. There is also to be a pension of £1,000 yearly, which is presumably to be paid by the Treasury.

"By a majority of one vote the Legislative Assembly resolved some time ago to sanction an annual expenditure of £4,000 for the purpose in question. This resolution reversed a previous decision to refuse the grant. Those members of the Assembly who favoured rejection contended that, although the Judicial Committee has rendered signal service to India, its cost should be borne by the Imperial Government, seeing that it is an Empire Court. Other members opposed the grant, on the ground that a Supreme Court of Appeal ought to be established in India to do the work which is now undertaken by the Judicial Committee.

"As you state in your note, the request for the establishment of a Supreme Court is much more generally and strongly supported now than it was in the first instance. For if India is to be federalised such a Court will be pre-

sumably a necessity. This point is stressed by the Associated Chambers of Commerce who, in their memorandum for the Simon Commission, ask that the new constitution may include a provision prohibiting the enactment of legislation discriminating against British commerce. And the memorandum continues: 'The Chambers conceive that the next step towards making India a federation of autonomous provinces will necessarily include a Supreme Court to interpret that constitution, and to adjudicate upon the reciprocal rights and obligations of the Central and Provincial Governments and of the Provincial Governments *inter se*. In this case the ultimate tribunal in India for interpreting this clause (the anti-discriminatory clause) would obviously be the Supreme Court subject to an appeal lying as of right to the King in Council.

"All the available information suggests that this proposal is meeting with general support in India. If so, and if the Statutory Commission reports in favour of it, the position of India in respect of the Judicial Committee may approximate, at no very distant date, to the position of Canada or Australia. At present the Judicial Committee is required to deal with more appeals from India than from any other part of the Empire. But with the establishment of a Supreme Court a reduction in the number of Indian appeals must surely be expected. And it will then be difficult to see why India should contribute towards the cost of the Judicial Committee while nothing is paid by any of the other Dominions.

"This consideration lends force to the objection which Sir Hamar Greenwood raised, in the course of last month's debate, to the proposed changes. He pointed out that the Judicial Committee is the only Imperial Tribunal; and that the case could have been met if the Government had simply added, say, three Lords of Appeal in ordinary, keeping the appointments in their own hands and the payment on the Consolidated Fund. He thought that by taking half of the salaries of the additional members from India the Government would be weakening the prestige of the Judicial Committee merely for the sake of saving £8,000 a year to the taxpayers."

THE HYDERABAD BUDGET.

Commenting last year on the gratifying picture presented by the Hyderabad State finances, mention was made of the contract form of budgetting introduced by Sir Akbar Hydari, the present Finance Member of H.E.H. the Nizam's Government, which is undoubtedly largely responsible for the further notable progress made during the past seven years. The Budget Note for the Muslim year 1338 Fasli (beginning October 6 last) deals with the receipts and expenditure for another triennium, the third since the scheme of decentralization was inaugurated in 1332 F. as an experimental measure.

A summary of the working of the scheme, originally introduced for a term of three years only, shows that for the first contract ending with 1334 Fasli there was a surplus of 223.18 lakhs, which, together with the moiety of the departmental savings (37.84 lakhs) amounted to 261 lakhs. The surpluses during the second triennium are expected to amount to 297 lakhs and the moiety of the balances to about 47½ lakhs.

For the ensuing 1338 Fasli Budget receipts have been estimated at Rs.790 lakhs, and expenditure at Rs.737½. The surplus will be added to this allotment to the departments of 102½ lakhs from past surpluses.

In his Budget Note Sir A. Hydari refers to the extensive agricultural programme, the provision of a network of rural co-operative societies, the reorganisation of the medical departments, and the extension of all branches of education. He anticipates that the next contract will provide for a revenue of nearly Rs.9 crores to be spent on the further realisation of these and other social services.

THE SOUTH-EASTERN BORDERLANDS OF RUBA AL KHALI.

Mr. Bertram Thomas lectured to the Royal Geographical Society on December 3 upon "The South-Eastern Borderlands of *Ruba al Khali*." In introducing the lecturer, the President, Sir Charles Close, said that while in the interests of geography they wished some Europeans to cross *Ruba al Khali*, perhaps in their capacity as human beings they ought not to wish it.

Mr. Thomas, who illustrated his lecture with many lantern slides illustrating the various stages of his recent journey from Suwaih to Dhufar (an account of which appeared in *THE NEAR EAST AND INDIA* of November 1), as well as the map of unknown territory which he had constructed, referred to the *Ruba al Khali* as a vast, unknown region of 300,000 square miles of probably uninhabited scorching sand and arid steppe, bounded by habitable Najd on the north-west, and by coastal strips of Oman, Hadhramaut, and Yaman on the north, south, and west respectively. The two obstacles that barred the way to scientific investigation of the Empty Quarter were: (1) its sterility was of a peculiarly prohibitive kind; and (2) its every avenue of entry and exit was closed by a people fiercely jealous of the secrets of their poor marshes and waterholes, and predisposed to intolerance of foreign penetration in whatever sense.

Oman was scarcely mentioned by the classical geographers; and the only European exploration of south-eastern Arabia consisted of Wellsted's visit, nearly a hundred years ago, to the eastern province of Jaalan, and in the 'nineties, the Bents' visit to the mounties of Dhufar. It was the 500 mile stretch between these two points, hitherto untrodden by European, which Mr. Thomas successfully traversed early this year.

He described the difficulties which he had in getting reluctant consent to proceed from the Amir of Bani Bu Ali (who, as Sir Percy Cox subsequently remarked, was now under a cloud with H.M.G.), whose town of Balad Bani bu Ali no European had been permitted to enter for 93 years. From Suwaih his party went to Ghina and thence to the three Janabi villages of Juwaibi, Aiyun, and Al Qatara. At this point the lecturer devoted some attention to the province of Jaalan, mentioning, among other things, its Wahhabism, and the fact that the Bani bu Ali were the Bliulaie of Ptolemy.

They proceeded from this country in a course east of south, crossing the Wadi Bahta. Then they moved along the southern edge of Wadi Ubaidha for two days, and afterwards struck towards the coast through scrub country which was called Khuwaiyim. A vivid descrip-

tion was given of how the coastal people, absolutely fearless of sharks, made their living by fishing. Proceeding westwards, the lecturer and his party crossed the Wadi Halfain, which was the most important Badawin corridor between Northern Oman and the Indian Ocean. It appeared to divide the sands of *Ruba al Khali*, isolating the island of sand which ran up into Jaalan. His suggestion of the course of the Wadi Halfain, by the way, differed from that on the maps of Wellsted and of Miles.

Arrival at Khaluf, Mr. Thomas found that the Shaikh of Masirah had much the same views about his journey as those entertained earlier by the Amir of Bani bu Ali. However, he finally succeeded in getting a Harsusi *rafiq*, and they left the Bay of Bintauf, making for the Wadi Sarab. Here he was struck by the almost southern European faces of the youthful inhabitants. They continued their journey to Wadi Ainain, whence onwards to Dhufar water was practically non-existent.

This final section of the journey has, however, already been described in general terms in *THE NEAR EAST AND INDIA*, and although the lecturer added much fresh material, we must refer readers to the next *Journal* of the Royal Geographical Society.

In conclusion, Mr. Thomas referred to the non-Arab tribes known as the Harasis, Bautahara, Mahra, Qara, and Shahara. He said that at the dawn of history South Arabia had settlements of Sabaeans dotted about it. The Sabaeans were overthrown by the Himyarites, and these in turn were absorbed by the Arabs. Now the Queen of Sheba (Sabaeans) was claimed both as an African and an Arab queen, and the tribes whom he had discovered had, with the exception of the Harasis—a tradition of African origin. On the evidence of physical characteristics, tribal tradition, customs and head measurements, he suggested that these tribes were of Hamitic and not Semitic origin. Dr. Rathjens, a German adviser to the Imam Yahya of the Yaman, supported him on the score of types which he had seen farther west; and Dr. Neilson, of Copenhagen, had told the lecturer that Glaser was of the opinion that Hamitic tribes should be expected in the Central South.

After the lecture Sir Denison Ross spoke of the immense research work yet to be done in connexion between Africa (Punt) and the southern coast of Arabia. The lecturer had suggested an African origin for certain tribes in southern Arabia, and that was very probably correct. In ancient days people had set out from Africa in sailing ships for the East, and undoubtedly they had much more influence upon Arabia than was generally admitted. He mentioned, in particular, the probable influence of Abyssinia upon the Shahari, Mahri, and so on alluded to by Mr. Thomas. Another suggestion which Sir Denison threw out was that the Royal Geographical Society should organise an expedition to conquer *Ruba al Khali*, in the heart of which there might be all sorts of interesting things. So far, not even an aeroplane had flown across it.

Sir Percy Cox, in congratulating the lecturer upon his excellent work of exploration, described his own experiences in Oman some thirty years ago. He, too, had dreamed of crossing *Ruba al Khali*, from Muscat to Aden, but although the Shaikhs on the Oman side asserted that it was perfectly possible to cross the great desert, they thought it might go hardly with the traveller in the hands of shaikhs on the other side. On the Aden side, similar arguments were used! For his part he did not believe there was anything in the Empty Quarter, because nothing had ever come out of it. He was, however, in favour of its being crossed by aeroplane. With Mr. Thomas's explanation of the word Dhufar (Dhu-Afar) he was inclined to agree; certainly it was absurd to suggest that it had anything to do with the Biblical place, Ophir.

Speaking at the recent annual meeting of the Indian Historical Records Commission at Nagpur, Sir Montagu Butler, Governor of the Central Provinces, referred to a recent discovery of autograph letters from Arthur Wellesley, which would probably have remained buried in the Nagpur record room but for the local enthusiasm aroused by the Commission's visit.

Book Reviews

ALEXIUS COMNENUS.

"THE ALEXIAD OF THE PRINCESS ANNA COMNENA." Translated by Dr. Elizabeth Dawes. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 15s. net.)

A reviewer of this delightful book finds it difficult not to "let himself go" in order to enable his readers to share liberally in the enjoyment which he has experienced in reading it. The temptation must, however, be resisted. It is, therefore, to be hoped that enough can be said to induce others to buy the book for themselves. They will not regret it. The matter is good and the translation excellent, as the following extract will show:—

The arrow from the cross-bow struck the top of Marianus' helmet and pierced it in its flight without touching a hair of his head, for Providence warded it off. Then the man speedily discharged another arrow at the Count, and hit him in the side. . . . A certain Latin priest who happened to be standing in the stern with twelve other fighting men, saw this, and let fly several arrows against Marianus. Not even then did Marianus surrender, but fought fiercely himself and encouraged his men to do the same, so that three times over the men with the priest had to be replaced, as they were wounded and sore-pressed. The priest himself, however, although he had received many blows, and was streaming with his own blood, remained quite fearless. . . . After the battle had raged fiercely from the evening till next midday, the Latins surrendered to Marianus, much against their will, asking and obtaining a promise of immunity. But that most bellicose priest did not stop fighting, even while the truce was being concluded, but as he had emptied his quiver of darts, he picked up a sling-stone and hurled it at Marianus. The latter protected his head with his shield, but the stone struck the shield and broke it in four pieces and shattered his helmet. And Marianus was overwhelmed by the blow from the stone, and at once fell unconscious, and lay speechless a long time, just as the hero Hector almost gave up the ghost when hit with a stone by Ajax. He recovered with difficulty, and then pulled himself together and by shooting arrows at him, thrice hit the man who had struck him. Yet that polemarch, rather than priest, was not even then sated with fighting, and as he had hurled all the stones he had, he was now utterly unarmed and bereft both of stones and darts; so not knowing what to do or how to defend himself against his adversary, he grew impatient, and stormed and raged and twisted himself about like a wild beast; and directly he saw anything handy he used it. Then he discovered a sack of barley-cakes and began throwing out the barley-cakes from the sack as though they were stones, as if he were officiating at a service and turning war into a sacred celebration. And one barley-cake he picked up, drove it with all his might, aiming at Marianus' face, and hit him on the cheek. So much for that priest and the ship and its crew. The Count of Prebentza, after surrendering himself and his ship and his soldiers to Marianus, immediately followed him. And when they had reached land and were embarking, that same priest often and repeatedly asked for Marianus and, because he did not know his name, he called him by the colour of his clothes. When he found him, he threw his arms round him and embraced him, whilst he said boastfully, "If you had met me on dry land, many of you would have been killed by my hands." Then he pulled out and gave him a large silver cup worth one hundred and thirty staters. And with these words and gift he breathed his last.

After reading this, we shall not be surprised to read of the authoress' method of collecting the facts for her narrative, which she, if the reader will forgive another quotation, describes as follows:—

What I have added to my history, let God and his Mother my Mistress be my witnesses, I have collected from absolutely unpretentious simple commentaries, and from a few old men who were soldiers when my father seized the Roman sceptre but have fallen on evil times and retired from the turmoil of the world to the calm life of monasteries. For the commentaries which fell into my hands were simple in diction and strictly truthful and displayed no style and were free from all rhetorical pretensions. And the narratives of the old men were like the commentaries both in phrase and scope, and I judged the truth of my history from them by comparing and examining what I had written with what they told me, and what they told me with what I remembered from having often heard the accounts both from my father himself and from my paternal and maternal uncles. From all these sources I wove the whole fabric of my truthful history.

Indeed, not only in the tale of the fighting Padre but in many another we can almost hear the old soldier telling the royal lady of what his eyes had seen. Not that her own narrative is "free from all rhetorical pretensions." She had been brought up as a Princess and had received an education which astounds us when we think of the accomplishments of even our most learned men at the

time, i.e., soon after the Norman Conquest. She loves to air her classical knowledge and to touch on philosophical and theoretical matters, but, on such occasions, quickly recalls herself to her task as historian. Little human touches are very common, such as:—"I had got as far as this and was toiling with my pen about the time of lamp-lighting, when I noticed that I was dozing a bit over my writing."

What she sets out to tell is the story of her father, the great Alexius I Comnenus. It is indeed a stirring story. "There was a time when the limits of Roman rule were the two pillars which bound east and west respectively, those on the west being called the 'pillars of Heracles,' those on the east the 'pillars of Dionysus,' somewhere near the frontier of India." But, when her father came to the throne "the boundary of the Roman rule was the neighbouring Bosphorus on the east and the city of Adrianople on the west." His task in gradually enlarging these narrow boundaries was rendered doubly hard by the constant necessity of fighting against powerful neighbours on all sides, especially the Turks and "Scythians," and resisting numerous rebellions and plots among his own subjects. He was a great soldier but, as his daughter proudly claims, he was a greater man of wiles.

I hold that a general ought not always to try to gain victory for himself by drawing his sword, but that, when opportunity and circumstances permit, he should occasionally have recourse to wiliness and thus ensure complete victory for himself. For, as far as we know, it is a prerogative of generals not only to deal with swords and fighting, but also with treaties. And, besides when opportunity offers, it is as well to rout the enemy by playing the rogue with him, and this is what the Emperor seems to have been busy with at that time.

The chief interest of the story lies in the tale of his wars with Robert Guiscard and his son Bohemond and in its account of the First Crusade which we read of as seen by Byzantine eyes, vivid and intimate, as readers of Gibbon know. Truly the Emperor needed all his wiliness to deal with these gentry.

But we must come to an end, though not without thanking Dr. Dawes for a translation which is not only a work of thorough scholarship but also a piece of genuine English literature. Nor should the publishers be forgotten for producing so desirable a book in comely dress and at a very reasonable price.

THE WORLD'S OLDEST EPIC POEM.

"THE EPIC OF GILGAMISH." Translated by Dr. R. Campbell Thompson (London: Luzac & Co. 10s. 6d. net)

The tablets from which this translation has been made belong to the seventh century B.C., and are now in the British Museum. Fragments of older tablets, dating from about 2000 B.C., onward are in existence, and these have been made use of in the task of collating and completing the former. The result is a nearly complete

A LITERARY HISTORY OF PERSIA

By E. G. Browne, M.A., M.B., F.B.A., F.R.C.P.

In 4 volumes. Demy 8vo. 21s net each.

The four volumes of the late Professor E. G. Browne's history of Persian literature from the earliest times down to 1924, are now published by the Cambridge University Press, and can therefore be obtained in a uniform style of binding.

CAMBRIDGE UNIVERSITY PRESS

Fetter Lane, London, E.C.4

version of the poem; done into English hexameters which, if perhaps a little too much savouring of Wardour Street; gives the meaning of the original clearly and well, avoiding "improvements" on the text and carefully guarding with brackets the smallest verbal departures from literalness.

How old this poem is, no one can tell. But there are indications that it is at least some 2000 years older than the earliest fragments extant, and doubtless the materials from which it was gradually built up are much older still. It is a wonderful composition, and it is, to say the least of it, remarkable that so much poetical beauty and philosophical thought can have been given expression in language by people whose civilization perished centuries before ours began. The main burden is the "Vanity of Vanities" theme, and not even the Preacher or Jeremiah was able to produce so hopeless an atmosphere of titanic gloom as we have here presented. Death comes to all human beings, even to the demi-god Gilgamesh. Existence after death is drab and miserable. Yet none can escape. Most readers will turn to the account of the Deluge as told by Uta-Napishtim (Noah). It is curiously like the Old Testament story, but also curiously unlike, the most evident unlikeness being the want of any moral justification for the infliction by the Gods of this terrible disaster.

We note that Dr. Thompson is working at a critical edition of the text of the Epic as revealed by his fresh collation of the British Museum tablets, including a translation. In the meantime the ordinary cultured reader has much to thank him for in giving in this paragon an opportunity of reading the wonderful ancient story without too much technical material and presented in a very pleasant form.

INDIAN NOTES.

(Continued from page 667.)

not be prepared to find the capital—estimated at Rs. 12 crores—which would be required to replace, within five years, the large fleets that are now engaged in the trade. And shippers would suffer, because the management would be inexperienced, and for the reason that companies relying solely on the coastal trade would not be able to guarantee such regular and adequate services as now exist. In short, the Bill is, as we have said, an impracticable measure; and it is based solely on racial discrimination. At the present time nationalism makes a strong appeal to the educated Indian who is apt to be only too easily convinced that external capital and enterprise must always mean the exploitation and ruin of his country. How mistaken this view often is may be seen from the match manufacturing industry in India. It is clear from the evidence taken in the recent inquiry before the Tariff Board that the Swedish Match Company has directly

stimulated the Indian manufacturers by forcing improvements in technical processes. In the same way it will be to the advantage of India to retain British shipping on the coast, as the European competition and leadership, which will thus be ensured, will tend to raise Indian standards of efficiency. Unfortunately, however, racial feeling is so strong that the nationalist is often willing to sacrifice solid material advantages such as these if he can only restrict or, better still, terminate any particular form of European industrial and commercial activity.

Indian Railways in 1927-28.

Like the general Budget itself, the annual account of the results of railway working in India has to be prepared at least six weeks before the close of the year to which the statement relates. And the remaining period, moreover, is that in which traffic is usually most brisk and both earnings and expenditure at their peak. At the same time, with the monthly traffic returns consistently higher than in 1926-27, and all descriptions of goods contributing to the improvement, it was obvious long before the last Budget was compiled that the twelve months ended March 31 last would be a most prosperous year for Indian railways. In this confident expectation the Railway Member was able to announce reductions in rates and fares involving a sacrifice in traffic receipts exceeding three crores of rupees in a complete accounting period. The White Paper embodying the Railway Board's latest statistics, published last week, shows that these anticipations have proved correct. The gross revenue receipts of State-owned railways, which now comprise 72 per cent. of the total mileage, amounted to Rs. 104 crores, or Rs. 5 crores more than in 1926-27, and the net figure of Rs. 39 crores as compared with Rs. 34½ crores in the previous year. Goods traffic, as was anticipated, was responsible for most of the increase in gross receipts. On the other hand, earnings from passenger traffic on all railways increased by Rs. 1 crore to Rs. 39 crores, nearly ten million more passengers being carried than in the earlier period on account of the reductions in fares already effected.

OBITUARY.

The death occurred on December 8 of Miss Mary Broadhurst, President of the National League, who was well known to Middle Eastern circles. Her endeavours to combat subversive movements in the British Empire led her to promote a movement for Anglo-Arab friendship; she considered a friendly Arabia an essential British interest. Particularly she championed the cause of the Arabs in Palestine. Of recent months she had been striving hard to secure the Dead Sea Salts under British control.

The death is announced, at the age of 48, of Mr. Paxton Hibben, the American journalist who acted as war correspondent for the Associated Press in Europe from 1915 to 1917. In the intervals of his journalistic work during and after the Great War he was secretary of the Russian Commission of Near East Relief, with the Military Mission to Armenia in 1919, and secretary of the Russian Red Cross Commission in America three years later. Mr. Hibben was the author of "Constantine I. and the Greek People" and "The Famine in Russia."

The funeral service for M. George Marchetti, Chairman of the Greek Community in London, was held at the Greek Cathedral, Moscow Road, Bayswater, on December 3. The Metropolitan of Thyatira officiated, assisted by the Archimandrite Aganthangolos Moscovakis and the Archimandrite Constantinidis. Among those present, in addition to members of the family, were the Greek Minister, M. A. Collas, Captain Demetrius Papalexopoulos, M. J. Gennadius (formerly Greek Minister to the Court of St. James's) and Mme. Gennadius, Mme. Metaxas, Mme. Psychas, Sir John and Miss Stavridi, Sir H. Harris, Lady Ralli (wife of Sir Lucas Ralli), Mrs. P. Ralli, Mr. and Mrs. M. Ralli, Mme. Mavrogordato, Mme. Zarifi, M. and Mme. Scrim, M. and Mme. Constantinidis, M. J. Calvoceressi, Miss Julia Ralli, Miss Ambrose Ralli, M. John Frangopulo, Mme. Fachri, M. and Mme. A. Ionides, M. and Mme. S. Agilesto, Mr. and Mrs. Peter Ralli, Miss Neil Stewart Richardson, M. Paul Schilizzi, M. J. D. Kalergis, Mr. E. C. Demetriadi, M. A. E. Mavrommatis, M. and Mme. Lambrinudi, M. and Mme. Sevastopoulo, M. and Mme. Ziffo, M. and Mme. Leon Argenti, Miss Lambrinudi, Major Melas, Mme. Hourmouzios, M. Ag Aigherino, Mme. Vassiliadi, M. and Mme. Rodocanachi, Mme. Alexandroff, Mme. Vlasto, Mme. Ambrose Scaramanga, Mr. Peter Rodocanachi, Mr. G. M. Chrussachi, and Mr. S. A. Pelecanos.

PERSONAL AND GENERAL

TO-DAY

December 13, 1928 (New Style).
 November 30, 1928 (Old Style).
 Jumada II, 29, 1347 A.H. of the Muslim Calendar.
 Kislev, 30, 5689, of the Jewish Calendar.

Lady (Arthur) Pearson will leave the May Fair Hotel early in January for Egypt. .

General Sir John and Lady Maxwell will leave London on December 21 for Egypt.

Lady Maffay left Marseilles on December 7 in the P. and O. s.s. Cathay for Port Sudan.

Admiral Sir William and Lady Henderson sailed in the s.s. Llandaff Castle on December 8 for Port Said.

Sir Basil and Lady Blackett arrived in London last week from India, and are staying at Queen Anne's Mansions, S.W. 1.

Sir Ronald Storrs, Governor of Cyprus, is suffering from anæmia, and has been ordered complete rest for several weeks.

Captain Demetrius Papalexopoulos, Naval and Air Attaché at the Greek Legation, arrived at Claridge's Hotel at the end of last week from the Continent.

The headmaster of Eton (the Rev. Dr. C. A. Alington) and Miss Elizabeth Alington have left Eton for Cairo, where they will be the guests of the High Commissioner.

Lady Susan Dawnay embarked on December 8 with the Hon. Charles and the Hon. Francis Wood on the P. and O. liner Morea, at Marseilles, to visit the Viceroy of India and Lady Irwin at Government House, Delhi.

The dinner and dance to be given by Almina Countess of Carnarvon in honour of ex-King George and ex-Queen Elizabeth of the Hellenes, has been postponed from December 10 to next Tuesday, December 18.

Sir Berkeley and Lady Moynihan left England on December 6 for Egypt, to attend the Centenary Celebrations at the School of Medicine, Cairo. They will return on January 11.

Major-General Sir Frederick Sykes, the new Governor of Bombay, arrived in Bombay on December 7, and was received with the customary ceremonial at the Gateway of India.

Sir William de Courcy Wheeler left London on December 6 for Egypt, joining at Marseilles the s.s. Morea, in which Major-General Sir Courtenay and Lady Manifold are passengers to Bombay.

Dr. Trumbitch, one of the leaders of the Croat Coalition, has arrived in London, with Mme. Trumbitch, on a short visit. Dr. and Mme. Trumbitch were the guests of Sir Edward and Lady Boyle at luncheon on December 6.

Sir William Himbury left Manchester on December 11 on a tour of India, Iraq and Egypt on behalf of the British Cotton Growing Association. He expects to return to England in the spring, embarking at Port Said towards the end of March.

The Secretary of State for India has appointed Mr. M. J. Clauson to be his assistant private secretary, in succession to Mr. J. P. Gibson, who has been appointed by the Permanent Under-Secretary for India to be his private secretary, vice Mr. R. E. Field (promoted).

AN ABYSSINIAN APPOINTMENT.

Mr. C. Walker, O.B.E., after many years' service in the Sudan, and, as H.B.M. Consul at Goré, in Western Abyssinia, has retired, and Captain E. N. Erskine, M.C., has succeeded him as Consul for W. Abyssinia. Mr. Walker's linguistic achievements were considerable; in conjunction with Mr. Consul Hodgson (now Governor of the Falkland Islands) he produced a Galla Grammar, and he has an Ethiopic Grammar now in the press.

Captain Erskine left the King's African Rifles to join the Anglo-Italian Jubaland Boundary Commission as Political Officer and Assistant Commissioner. He afterwards spent two years in Somaliland and a year in Italy. Pending the arrival of Mr. Bullard, of Jidda and Athens, Captain Erskine has been Acting Consul at Addis Ababa, holding this office, incidentally, while the political incidents in connexion with the Coronation of Ras Tafari took place.

Brigadier F. W. Hunt, C.B., C.M.G., C.B.E., is vacating the appointment of Director of Veterinary Services at Army Headquarters in India, which he has held since May 24, 1925. His work in the field in the care and treatment of horses and administration of veterinary services has been extensive and of great value, ranging from the Tochi Valley operations, relief of Kimberley, the action of Paardeberg, advance to Pretoria, Somaliland campaign, and as a veterinary chief in France and Mesopotamia. He was on General Sir Alexander Godley's staff at Salisbury before his selection for the veterinary charge of India.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARAB TRIBES IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In his most interesting account of his recent journey in South Arabia, which you publish in your issue of November 1, Mr. Bertram Thomas writes as follows: "This region forms the habitat of a group of five tribes which are racially distinct from the Semitic Arab, and perhaps from one another; and they speak four separate dialects which are not understood by Arabs, and which have closer affinities with Ethiopic than with Arabic, though I think they are early Semitic and more closely associated with Himyaric."

I do not profess to be competent to express an opinion on these conclusions, which may be justified on evidence for which there was naturally no room within the limits of such an article; I would, however, point out that Mr. Thomas appears to have reserved all his evidence for the experts and to have contented himself with supplying just enough material to justify a suspicion that an average Arab would not be altogether nonplussed by the language of the tribes in question. Their names and the place-names of the tract where they live appear to be normal Arabic, but these may have been imposed from outside by the surrounding Arabs. One would, however, expect to find the dialects asserting themselves over any other influence in the common words of everyday life, the names of plants and animals, clothing and natural features. Mr. Thomas gives us a score of such words, but, with the exception of *tishgaut* (a libaniferous shrub), there is not one which would not pass muster among the Arabs of Najd or the Hijaz. For instance, he mentions *rafīq*, *zakat*, *mahfif*, *samn*, *rim*, *dab*, *faiya* (? misprint for *haiya*), *mgħur*, *sik* (this must be familiar to him from Petra), and, to mention but a few of the plants, *ithal*, *rimram*, *haram*, and *thamama*. These words are all perfectly familiar in most parts of Arabia.

It may be admitted without evidence or argument that the language of Southern Arabia, like that of other coastal regions of the peninsula, has not remained unaffected by outside influences during all these thousands of years. But clearly more evidence is necessary before we talk of non-Arab tribes, and it may well prove in the end that the Arabs are not really Arabs at all but another race of the same name.—I am, etc., H. ST. J. B. PHILBY.

Jidda, Arabia. November 22.

[We have referred Mr. St. John Philby's letter to Mr. Bertram Thomas, who writes to us as follows.—ED.]

"I have to thank you for your courtesy in showing me Mr. St. John Philby's letter commenting on my recent journey in South Arabia, which enables me, with only a day or two to spare before I leave for Muscat, to answer it.

"Mr. Philby's suspicion that an average Arab would not be nonplussed by the languages of Hadara group is a mistaken one. None of these languages can be understood by Arabs, other than by a few locals who in rare cases may be bilingual. Four 'average Arabs' accompanied me throughout my journey: a literate Muscati—my

secretary, a Yal Wahiba sub-shaikh from Northern Oman, and two Janabah tribesmen from the Ja'alan province. None of these could make head or tail of any one of the four languages in question.

"The opening sentence of his final paragraph would appear to imply that Mr. Philby is not aware of, or at least is not familiar with, the Mahri and Shahari material already in existence, the fruits of two philological expeditions to South Arabia (Count Landberg, 1898-99, and Dr. Von Müller, 1902). I would refer him, therefore, to the work of Dr. Maximilian Bittner, which embodies this research, and from which he will see that the languages of South Arabia (Shahari and Mahri are two of my four) are not merely Arabic dialects coloured 'by outside influences.' They are, it is true, Semitic, but they are not Arabic. Against the possibility of my vocabularies (some 500 words in the case of three and many fewer of Bauta-hari) not having reached the publishing stage when Mr. Philby is next in this country, I shall be happy to arrange that they may be made available for him to see in manuscript.

"The 'score of words' to which Mr. Philby calls attention are what he truly says they are, Arabic. I do not remember claiming that they were anything else. My practice, indeed, both in my map and papers, has been to use Arabic terms rather than one of four possibly obscure alternatives—this to ensure uniformity and a ready comprehension of my meaning. I could, for instance—to take a few words at random—have called

*Raubat (Ar.)	...	Rizain (Har.), Eriyot (Sh.), Ribot (Mah.).
*Balid (Ar.)	...	Harkam (Sh.).
God	...	Abali (Sh.).
Sun	...	Haiyum (Mah.).
Moon	...	Harit (Har.), Airit (Sh.).
Man	...	Ghaik (Sh.).

Camel	...	Haibit (Har.), Jun (Sh.) nasal n.
Egg	...	Bettel (Har.), Gaihil(un) (Sh.), aspirated l as in Welsh Gaelic.

* Place names as on maps.

but had I done so, I suspect that Mr. Philby, a distinguished Arabic scholar himself, would have been nonplussed.

"The tribes of the Central South cannot be identified with any Arabs within my experience, Hadhr, or Bada-win, in appearance, dress, cranial index measurement, customs, tradition, or language. The scholar Glaser held that Hamitic racial survivals may be looked for in Southern Arabia. I believe that in these tribes, in all or in part, we have them. But whatever they are not, they are, I am persuaded, survivals of some early peoples quite palpably distinct from the known Semitic types of Arabic-speaking Arabs.

"Finally, the concluding remark of the latter may perhaps show a predisposition on Mr. Philby's part to make up his mind without waiting for that 'evidence for which there was naturally no room within the limits of such an article.' May I ask him please to postpone forming an estimate of the Ahl al Hadara and Qara until my Oxford paper, which I understand is to appear in the next issue of the Royal Anthropological Journal, is in his hands?"

Captain Batchadescu, on his way to take up his duties as Roumanian Military Attaché in Paris, last week crossed the Simplon Pass on horseback through 6 ft. of snow, taking three days to get from Domodossola to Brigue.

THE WEEK AT HOME

London, Tuesday Morning.

Labour and Protection.

A good deal of play is being made by the political opponents of Labour over the fact that, whereas a majority in the Trade Unions of the textile trade in Yorkshire have recently advocated a measure of protection, or safeguarding, for their industry, the Labour official representatives have declared themselves wholehearted Free Traders. Mr. Philip Snowden, indeed, has openly declared that, if Labour comes into office, it will have none of this pernicious Safeguarding.

Here seems—one cannot as yet say more than that—to be an excellent example of the difference between the man who has actual experience and the doctrinaire. More and more the average Englishman is indisposed to trust the doctrinaire in the matter, on whichever side he be. Practically all of us now feel that things have come to such a pitch that the fullest opportunity should be given to those who deny the infallibility of the fiscal system which has served the country so well in the past to explain their views.

This is by no means the same thing as saying, of course, that the country as a whole would be prepared to see an indefinite extension of Safeguarding. It does appear, however, that things are pointing in that direction. If the position ever does arise when large Trade Unions are opposed to the fiscal policy advocated by the official Labour Party, who can foretell the result?

Capital Punishment.

Last week in the House of Commons, when the Whips were off, Commander Kenworthy introduced a Bill to abolish capital punishment, and obtained a majority of one for it. The fact is a little remarkable, especially if the voting is analysed. It was supported by Labour and Liberals, and, with the exception of nine, opposed by the Conservatives.

Why the voting should have taken these lines it is hard to say. Of course, the Bill will not be heard of again in this Parliament, so that there is no immediate prospect of seeing murderers in this country sentenced to penal servitude for life instead of hanging. But that such a Bill should have been carried, for the first time in the history of the Commons, and in spite of the Conservative vote, is indeed worth noting. Now are Conservatives less tender-minded, less sentimental, less Christian, if you like, than the other parties?

For myself, who do not attach to any particular party, I should be sorry to see the extreme penalty abolished. There is nothing derogatory in its exercise, nor is there anything to be gained by its abolition. But an increasing number of people, if this Commons vote is any criterion, think otherwise. Is the future of England really with the sentimentalists?

The Imperial Telegraphs Bill.

The wireless and cable merger may or may not have been an excellent thing in the interests of the State, but the Government has succeeded in wrapping round the transaction with a mist of suspicion. This Imperial Telegraphs Bill, as it is called, has received a severe buffeting in the Commons: last week it suffered a series of squalls.

Unquestionably, as in the famous Marconi case of yore, there have been people in the know who should not have been in the know, and financial benefits gained which should not have been gained. Were this not so, responsible Members of Parliament could hardly call the transition "daylight robbery," or "a disgraceful ramp," or charge the Government with holding back all the necessary particulars until the consent of Parliament had been given.

As I say, the Bill may be all right; but one cannot examine too closely nowadays the financial transactions between private companies and Governments, and all one's reactionary sympathies must lie with those Labour members who are endeavouring to assert the honoured rights of Parliament to have the fullest details about a public matter in which the State is closely concerned, and not sheepishly content themselves with departmental or even Cabinet recommendations.

Distemper.

There is no lover of dogs who has not devoutly wished that there were some cure for distemper, that most distressing and very general event in the dog's life. Now, however, light is breaking on this mysterious disease, for it is just reported by the Distemper Research Committee, who have been making investigations for two years, that a remedy has been found.

The cause of distemper is now accepted as being a virus or ultra-microscopic organism, and immunity from it is caused by a double inoculation—first with a vaccine which is the sterilised virus of distemper, and then with an attenuated strain of living virus. This treatment has had quite remarkable results, and it may be presumed that, among the wealthy dog-owners, at any rate, it will come in for some popularity.

Whether, however, it can ever become so cheap as to be generally employed, I have no means of knowing. Not yet, anyhow, is the veterinary surgeon likely to lose the fees which he may almost safely reckon upon receiving during the first part of a dog's life.

The Varsity Matches.

By the time that these lines are in print, the results will be known of the Rugger and Soccer matches between Oxford and Cambridge. But as I write it is still hope (or fear) that governs one's opinion of these matches. Every year a bigger crowd seems to gather at Twickenham to see what is certainly one of the games of the year. But at Stamford Bridge, where the Soccer match is now played, there does not seem to me to be the enthusiasm which used to be manifested at Queen's Club.

Cambridge look to me to have the finest fifteen of any playing in England this year, and I shall be surprised as well as shocked at the unfitness of things, if the always plucky and increasingly forlorn Oxford people pull the match off.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Debt Agreement.

The long and tortuous course of the negotiations over the Turkish Debt question have finally been brought to an end by the ratification by the Grand National Assembly at Angora of the agreement arrived at in Paris last June and its subsequent signature by the President. The ratification was not unanimous, this being the first occasion on which a Government motion has failed to receive general approval, and the agreement as approved has two amendments, a fact which has given rise to some anxiety as to the possibility of the reservations proving a cause of further delay. One of the reserve clauses deals with the question of the funds in the possession of the Debt Council, and stipulates that they are not to be utilised until differences between Turkey and the Succession States over the Turkish Debt have been composed, while the second concerns the liquidation of Turkish paper money issued since 1914 and held in connexion with the public debt. The effect of the insertion of these clauses has certainly been to render the position a little obscure, but there is no real ground for the belief that they will be made the pretext for further negotiations, as it has been made clear in various ways that Turkey is now only too anxious to settle her outstanding obligations. Thus soon after the ratification the news was forthcoming that Mr. A. G. M. Dickson was proceeding to Constantinople at the request of the Turkish authorities to take charge of the negotiations for a settlement of the default on the Constantinople loan. The amount of the loan is £1,000,000, and the arrears of interest from 1914 to December 14 next amount to 60 per cent. This loan, which is guaranteed by the Turkish Government, is secured on the Galata Bridge tolls and other receipts. The Galata Bridge receipts are sufficient to meet the service of the loan, but they have been allocated to other purposes. The long-suffering bondholders will rejoice at this development which promises, it may be hoped, a speedy end to the present unsatisfactory position, and plainly suggests that Turkey is now making efforts to re-establish her credit. In the dim pre-War days Turkish bonds enjoyed a high reputation among foreign issues, and by the restoration of confidence abroad they may again in time come to enjoy their former reputation. It may at any rate be said that Turkey is now taking the right road to prudent finance, a record which, if pursued consistently, will make it easy for the country to obtain the large amounts of capital of which it stands in need for works of development. If the Debt agreement is carried out and the Constantinople loan default is settled it will then be a relatively easy matter for Turkey, in the more favourable atmosphere that will then obtain, to go to the foreign money market with proposals for her financial requirements.

The Greek Loan.

Closely following the Bulgarian loan is to come the issue this week of a Greek loan for the substantial amount of £4,000,000. The new loan only forms one-fifth of the amount which it is understood that the Greek Government will require for the works of development which are now being undertaken, such as the construction of roads and the various reclamation schemes, and it speaks volumes for the reputation Greece enjoys in foreign financial centres and for the improvement of her credit which has followed the reconstruction of her finance that

it should be possible for her to negotiate relatively large loans like the present one on what can only be considered as reasonable terms. The loan, which is being issued at 89 and will carry 6 per cent. interest, making the yield fractionally over 6½ per cent., will be the direct obligation of the Greek Government and will be repayable by half-yearly drawings at par.

The British Industries Fair.

Details available with regard to the White City section of the coming British Industries Fair show that the record figures for the number of exhibits and the floor space utilised at the 1928 Fair have already been broken. There are now 50 more exhibitors than at the last Fair, and an additional area of almost 40,000 square feet has been let, while applications are coming in daily for the space that is still available. As regards the Birmingham section of the Fair, a reference to which will be found elsewhere in these columns, the position is equally satisfactory, and it is now clearly evident that the Fair has definitely established itself as a really valuable medium of trade development. The news as to the number of foreign buyers who are coming to next year's event is most encouraging, and it is not too much to hope that the 1929 Fair will give a distinct fillip to the trade revival.

Oils and Markets.

A most interesting speech on problems confronting the petroleum industry was given by Sir John Cadman, the Chairman of the Anglo-Persian Oil Company, at the annual dinner of the American Petroleum Institute at Chicago, in the course of which he stressed the need for co-operation in the industry. As he most aptly pointed out, the coming of the oil age has been very sudden, so much so indeed that it is not surprising if there should have been, to use his words, "some disturbance of mental poise and muddling of economic thought." The position to-day is briefly that all over the world there are large oil areas, some like the Persian fields developed with the utmost circumspection, others exploited as if supplies and markets were alike inexhaustible. It is beyond the wit of man to say what the world's reserves of oil are, but it is obviously incumbent on those on whom the exploitation of them falls to see to it that they are utilised to the utmost advantage, since oil, like other minerals, once taken from the earth, can never be replaced. Sir John Cadman urged the promotion of a policy of sane and

honest internationalism in the oil industry, and added: "co-operation between national and international forces there must be, if we are not to squander the world's heritage." As an instance of the kind of co-operation that he has in mind he asked if it could be seriously contended "that, as a matter of permanent procedure, American oil should find its way to India or Persian oil to Iceland." The industry requires for its well being that the facts of geography should be accepted, that, in short, oilfields should serve their most convenient fields, and that instead of over production oil should be preserved, as Sir John Cadman put it: "not in imperfect containers constructed on the surface of the earth, but, so far as is practicable, in that great and perfect reservoir which Nature herself has provided."

The World's Oilfields.

In the course of his speech Sir John Cadman reviewed the position of the world's oilfields, and drew attention to some striking changes in production in recent years. Thus Mexico's production has fallen from 27,000 tons of crude in 1922 to 9,000,000 in 1927, but in six other producing countries the opposite has taken place. Venezuela and Columbia produced less than 400,000 tons in 1922, but their joint production by 1927 was more than 11,000,000 tons. Then Roumania has almost trebled her production during this period, while the production of Russia is recovering its pre-War dimensions. As regards Persia, Sir John Cadman pointed out that the production has risen from 2½ to 5½ millions, "a rise strictly regulated in terms of the internal consumption, which is low, and of the steadily increasing export demand, which is far from low." Dealing with Iraq Sir John Cadman made some interesting comments. Iraq is, of course, an oilfield of the future; its oil is not needed at the moment, if it were available, and it will be possible to develop this field in accordance with the fruits of experience gained elsewhere. "What a relief it is," said Sir John Cadman, "to think for a moment of the sanity and sense to be brought permanently to bear on the oil problems of Iraq." It was feasible, he said, to contemplate a production of some millions of tons in four or five years time. "If and when that comes about," he added, "there is no doubt that the office of trust accepted by all those nations interested in the development of Iraq will require that an outlet, and a permanent outlet, be found for Iraq's production."

Ford Enterprise.

The ubiquitous Ford has been established in this country for some time, but the prospectus of the Ford Motor Company, Ltd. (formed to take over the Ford companies here and in Europe), which makes its appearance this week, marks a new stage in the development of the campaign to bring the Ford models to every door, and is of special interest to our readers as the English company acquires the marketing rights in respect of all Ford products over an area which includes Palestine and Syria, Arabia (except Aden), Iraq, Persia, Afghanistan, Egypt, certain parts of Africa, and the Continent except Russia which means the whole of the Balkans. The fact that these countries are to be the subject of concentration will not be overlooked, I trust, by other motor companies

here. So far our motor car manufacturers have proved singularly slow in appreciating the importance of the Near Eastern markets and in producing models with a high clearance and in other ways suitable for them. It may be hoped that the example of the Ford will prove catching, but the position that the Ford has achieved in the Near East will now make competition very difficult. The latest development in that region, and one which is very significant (brief reference to which has already been made in these columns) is the Ford concession in Turkey. The company has obtained from the Government a concession for a free zone at Constantinople for twenty-five years, and it is intended to establish there an assembly plant for cars for the whole of the Near and Middle East. The attitude hitherto displayed by Turkey towards foreign enterprise has been such that foreign firms have found it difficult in many cases to carry on business, and it is a sign that gives cause for hope that this attitude to foreign enterprise is undergoing a distinct modification that the company will enjoy many privileges in its zone; thus it will not be compelled to use Turkish in its correspondence.

Grapes from Palestine.

The attention devoted to the all-important orange industry of Palestine has possibly tended to obscure to some extent the developments which are taking place in other branches of fruit production in the country. The vine is associated with Palestine from time immemorial, but the revival of the cultivation of the vine in modern times can be said to date only from 1882, when the Jewish colonies were founded. By 1914 the area under vines amounted to 58,740 dunums of which the Jewish colonies were responsible for 15,200 dunums. After the War vine growing continued mainly for the purpose of wine making, but the vicissitudes experienced by the wine industry of Palestine, due to a variety of causes, such, for instance, as the introduction of Prohibition in the United States, has led to attention being paid to the production of table grapes as well as wine grapes, and last year trial consignments were sent to the United Kingdom. With the development of larger markets here and on the Continent for Palestine wines the position of the wine industry has greatly improved, but developments so far have shown that there are prospects also for the utilisation of table grapes provided the difficulties of marketing them are overcome satisfactorily, so that in this direction also it seems probable that Palestine will have an economic asset.

COMMENTATOR.

A cement factory is to be established near Split.

During the first ten months of the present year 2,510 motor cars and 240 motor trucks and omnibuses were registered in the Lebanon.

A new regulation concerning the sale of foreign exchange to Yugoslav subjects and foreign citizens resident in Yugoslavia provides that sums up to 500 dinars may now be purchased once monthly without any form of special permit.

For the half-year ended October 31, 1928, the profit of the Bengal Coal Company was Rs.842,000, including carry-forward. To depreciation is placed Rs.94,000, to dividend Rs.600,000, and to commissions Rs.65,000, the carry-forward being Rs.83,000. The dividend for the half-year is 15 per cent., making 30 per cent. for the year.

Irrigation in Egypt

DAMS AND RESERVOIRS.

During the last century the main pre-occupation of the Egyptian Government has been the cultivation of cotton and the securing of the necessary additional quantities of water. The first suggestion for solving the problem was that made by the French engineer, Linant de Belfonde, to build a dam and reservoir at Gebel El Silsila, 875 kilometres south of Cairo. The failure of the Delta Barrage, however, discouraged the Government and the question of reservoirs was dropped. In the year 1880 the question was raised again, and in 1882 Mr. Cope Whitehouse suggested the utilising of Wady El Rayan, a depression in the desert of the S.W. of Fayoum, as a counter project for the repairs of the Delta Barrage and the extension of areas planted with cotton which demanded the presence of water all the year round pressed the question of reservoirs again and brought it into life. A special staff was allotted for the study of the various suggestions and for the survey of the trough of the Nile as far as the Second Cataract in search of the most suitable site for building a dam, to store the surplus clear waters in winter for utilisation during the summer months.

The First Cataract of the Nile south of Aswan was chosen as the most suitable site for a dam and reservoir. The preliminary works of construction of the Aswan Dam were begun in the year 1893, and the whole work was completed by the end of the year 1902. The work consisted of an insubmergible masonry weir pierced by 140 under-sluices, each 14 square metres in area, and 40 upper sluices, each seven square metres in area. All the sluices are provided with iron gates for water regulation. The dam has a total length of 1,950 metres on a straight line and was founded everywhere on the soundest granite rock of the Cataract. The maximum head of water on the dam was 20 metres. The height of the Dam from the lowest point of the foundations to the road level was 39 metres. The Dam was provided with a flight of 4 locks on the west side, each having a width of nine metres and a length of 80 metres.

The object of the original Dam was to hold up the clear waters of the Nile to R.L. 106.00 during winter, and thus store 1,000,000,000 tons of water, which were utilised to supplement the natural discharge of the river in summer and enable the diversion of 500,000 acres from basin to perennial irrigation in Middle Egypt. The cost of the Dam, including expropriation, was £3,050,000.

A few years after the Dam was put in work the natural rock was found to have been eroded at various points downstream of the Dam, due evidently to the effect of water escaping from the sluices. To protect the rock from erosion, it was found necessary to place masonry aprons downstream of the Dam. The work was started in 1904 and was finished in 1906. The total cost of the work was £350,000.

To increase the storage capacity of the reservoir it was decided to heighten the Dam, and the work was carried out between May 1907 and December 1912. The road level of the dam was raised by 5 metres, with the result that the water level could be raised by 7 metres, allowing a freeboard of one metre from the highest water level to the road level.

The main items of works involved in the first heightening were about 364,000 cubic metres of rubble masonry and about 214,000 cubic metres of excavation. The process entailed heightening and thickening, a block of masonry 5 metres wide being built on the downstream face of the dam. To permit the new masonry to settle freely, a joint of 15 cms. wide between the old and the new masonry was left open for some time, the new masonry being meanwhile supported during this period on thousands of steel rods inserted into the face of the old dam. The joint has been subsequently grouted.

The total cost of these works was £1,480,000. The heightening has allowed for the storage of about 1,400,000,000 cubic metres of water more than was stored before. Subsequently the water level in the reservoir was raised by another 90 cms. which provided for about 200,000,000 cubic metres extra capacity.

The extra amount of stored water after the dam was heightened was utilised for the improvement of the summer supply and in general for the conversion from basin to perennial irrigation of another 50,000 acres in Middle Egypt.

It is proposed to raise the dam for the second time another 7 metres, with a view to increase its capacity by 2.4 milliards, which means doubling the present capacity.

The matter is now under the consideration of an international commission appointed by the Egyptian Government.

BARRAGES.

Barrages are masonry bridges of several spans, fitted with gates or other means of regulation, to control the discharge of the river across which they are built. Their object is not to store water, but to help to distribute it. They act as weirs in raising the water level, until it is high enough to flow into the canals, which draw their supply from the river upstream of the Barrage.

In Egypt the following Barrages have been built :—

Delta Barrage, built at the bifurcation of the river 25 kilometres north of Cairo, across the heads of the Damietta and Rosetta branches.

Assiut Barrage, built across the Nile to the north of the town of Assiut, 397 kilometres south of Cairo.

Esna Barrage, built across the Nile 787 kilometres south of Cairo.

Zifta Barrage, built across the Nile on the Damietta Branch. 95 kilometres north of Cairo.

Nag Hamadi Barrage now under construction across the river 600 kilometres south of Cairo.

The following is a short description of each Barrage and the main objects for its construction :—

Delta Barrage.

The oldest Barrage on the Nile; it was started in the year 1848 and finished in the year 1861. Its object is to obtain control over the Nile at the head of the Delta, raising the water level in the river and diverting it to the main feeder canals of the Delta. It comprises two barrages, one across the Western or Rosetta branch and the second across the eastern or Damietta branch. The Rosetta Barrage has 61 arches and two locks, and is 465 metres long between the flanks; the Damietta Barrage had originally 71 arches (since reduced to 61) and one lock, and was 535 metres long.

The two Barrages are separated by a revetment wall, about 1,000 metres in length, in the middle of which was situated the old head of Rayah Menufieh. The arches of the Barrages are all of 5 metres span, except the two in the centre which are 5.50 metres. They are fitted with gates which are used to close the openings during summer, but which are lifted clear of the water in flood to allow a free passage for the river. The Barrage is built of brickwork with ashlar copings and quoins.

It was originally intended that the Barrage should be capable of raising the water level when the river was at its lowest by $4\frac{1}{2}$ metres, but this result was not obtained until it was afterwards repaired in 1896, when with the help of the two submerged weirs it actually holds now 6.00 metres head of water. Throughout the summer and until the arrival of flood the water level upstream the Barrage is held at a reduced level, 15.50 to 15.70 metres above the mean sea level of the Mediterranean at Alexandria.

Branches throughout the World.

Assiut Barrage.

This Barrage was built between 1899—1902 across the Nile north of Assiut Town and a short distance downstream the intake of the Ibrahimia Canal. Its object is to hold up the waters of the Nile to the level necessary for feeding Ibrahimia Canal and supplementing it with the share allotted for basin conversion in Middle Egypt of the water stored at Aswan.

The Barrage is built in rubble masonry of hard limestone; its cost, inclusive of the main feeder head, amounted to one million pounds approximately. It comprises 111 vents, the width of each vent being 5 metres, separated by piers 2 metres thick, which are covered by arches upon which there is a roadway $4\frac{1}{2}$ metres wide, and buttress piers 4 metres thick at every tenth opening. The vents are provided with iron gates for water regulation.

This barrage also comprises on the west side a lock for navigation, whose basin is 80 metres long and 16 metres wide. Regulation on this Barrage varies 3 to 2 metres throughout the year according to the Nile discharge which varies from 50 millions of cubic metres per day during low summer water to 900 million cubic metres per day during flood time.

Esna Barrage.

The work on this Barrage was started in the year 1907 and finished in 1909. It is built of Nubian sandstone finished with dressed ashlar copings.

The Barrage consists of 120 openings, each 5 metres wide, with piers 2 metres thick between the openings and buttress piers 4 metres thick at every tenth opening. There are two steel gates in each opening sliding in vertical grooves which are raised or lowered as required by travelling winches.

There is a lock on the west side large enough for the largest boats plying the river. The basin of the lock is 80 metres long and 16 metres wide, the road being carried over the lock by a swing bridge. The Barrage and its auxiliary works cost the Government about £1,200,000.

The object of the Barrage is to ensure the irrigation of the Basins to the north of it in the Province of Qena. The area of these basins amounts to 171,000 acres. The Barrage will in the future, when water is available, be utilised for the conversion of this Basin area into perennial irrigation, but as it was originally designed to stand a maximum of $2\frac{1}{2}$ metres head it has to be strengthened to stand the proposed pressure of $4\frac{1}{2}$ metres necessary to command the area to be converted.

Zifta Barrage.

This Barrage was built on the eastern branch of the Nile in the years 1901-1903. Its main object is to control the water in that branch of the river and utilise it in supplementing the canals taking off directly up stream of the Barrage when the main Rayah or feeders fail to fulfil the full requirements of water. It consists of 50 openings of 5 metres width, with abutment piers between each group of 10. Its design is the same as that of Assiut and Esna Barrages, but it is built in bricks instead of stone. It has a lock for navigation 65 metres long by 12 metres width. The cost of the Barrage and its subsidiary works amounted to about £420,000.

Nag-Hamadi Barrage.

The construction of the Nag-Hamadi Barrage was considered after the exceptionally low Nile of 1913, when an area of about 286,000 acres was left unwatered, due to the shortage of the flood. The Barrage is now under construction by the firm of Sir John Jackson, Ltd.

It is designed to stand a head of 4 metres in a low flood like 1913 and 4.50 metres when the Barrage will function as a summer means of aiding to increase the area of perennial land in Upper Egypt. To assist in feeding the area that will be protected on both sides of the river, two canals will be excavated: the Foadia Canal on the west and the Faroukia on the east. The length of the first is 45 kilometres and the latter 70 kilometres.

The Barrage consists of 100 vents, each 6 metres in width, and has a floor level stepping from R.L. 60.50 to R.L. 58.50. Ten vents are at R.L. 58.50 (mean sea level) next to the lock to take the summer discharge and help to keep the lock open for navigation in the low stages. Another ten vents are at R.L. 59.50 and the remaining 80 vents are all at R.L. 60.50.

The lock has been designed on the same lines as the Esna and Assiut Barrages, viz., 80 metres between the gates and 16 metres wide, with a floor level at R.L. 58.50. A feature of this lock differing from those at Esna and Assiut Barrages are the long guide walls upstream and downstream for the assistance of boats entering or leaving the lock. A swing bridge 6.40 metres wide spans the lock downstream so as not to interrupt boats when navigating.

Another main feature of the Barrage is the introduction of cement blocks placed upstream and downstream of the solid floor to prevent scour, which has been found in the case of other barrages.

The Barrage has 9 abutment piers 4 metres in width placed every ten vents. The piers in the first ten low vents are 2.25 metres thick and the rest of the piers are 2 metres. The roadway level is at R.L. 71.30, and the distance between the parapets for the clear roadway is 6 metres.

The Barrage, which is being constructed half-way between Esna and Assiut Barrages, is 592 kilometres south of Cairo, and the area that will be protected by it and its auxiliary works on both sides of the river in flood is about 600,000 acres.

The cost of the construction of the Barrage and the two main feeder heads will be a little above two million pounds, and the estimated cost of the auxiliary works in connexion about £1,500,000.

The work on the Barrage was started in November, 1927, and, according to the programme of execution, will be completed by July, 1930.

THE GREEK TOBACCO CROP.

It is reported that this year's tobacco crop in Greece will be much smaller than that of 1927, particularly in Eastern Macedonia and Thrace where the best Greek tobaccos are grown. In the Kavalla region the yield shows a great falling off, but the quality is much better than in the previous year. In the Drama region the crop is 60 to 70 per cent. smaller, though here again the quality has improved though not sufficiently to compensate for the decreased yield. In the Serres region the crop has also shown a decline. As the area under tobacco in these three regions has been increased by 19,000 stremmas (1,900 hectares) since last year, the fall in the yield is particularly significant. At Zanthi the crop yield is estimated at 30 okes per stremma as compared with 45 last year. The cause of the poor crop this year in these regions has been the lack of rain from the beginning of the spring until the autumn.

Shipping Intelligence.

GREECE'S MERCHANT MARINE IN 1928.

The figures for Greece's mercantile marine up to the end of the third quarter of this year show that it now comprises 1,250 vessels of a net tonnage of 30 and over consisting of 522 steamers of 1,212,681 tons and 728 sailing vessels of 58,923 tons, or a total tonnage of 1,271,604. Except as regards tonnage the figures vary little from those for the same period of 1926. The total number of ships was then 1,214 of 993,211 tons of which 477 were steamers (933,516 tons) and 737 sailing vessels (58,705 tons). The steamers acquired between the two periods have considerably increased the average net tonnage of Greek shipping. The following is the present division of Greek steamers: cargo boats 393 (1,111,246 tons), passenger ships (76,328 tons), various 10 (1,381 tons), ocean liners 3 (23,726 tons). For 1926 the corresponding figures were: cargo boats 340 (853,393 tons), 122 passenger ship (72,121 tons), various 14 (2,946 tons), and ocean liners 1 (5,956 tons).

SUEZ CANAL TRAFFIC INCREASE.

The statistics for the traffic of the Suez Canal for the first nine months of this year, which are now available, show a remarkable development compared with the figures for the previous year. The net tonnage of the shipping transiting the Canal during the period was 23,604,000, which constitutes a record, and is 2,147,000 tons more than the total for the first three quarters of last year, which was a record. There was a substantial development in both the outward and the homeward traffic, the greater part of the increase, however, being in respect of the latter. The outward traffic was responsible for 11,031,000 net tons, an increase on the 1927 figures of 914,000 tons, while the total for the homeward traffic was 12,573,000 tons, an increase of 1,233,000 tons. There were increases in commercial and postal operations of 1,082,000 and 702,000 tons respectively, while the movement in ballast showed an increase of 400,000 tons. Military tonnage at 240,000 showed a decrease of 37,000 tons. The tonnage of motor ships transiting the Canal showed a further expansion, the total for 602 transits being 3,435,000 tons as compared with 478 transits and 2,662,000 tons for the corresponding period of 1927.

As regards the nationality of the shipping transiting the Canal the British total was 13,357,000 tons or 56.6 per cent. of the total which compares with 57 per cent. for the previous year. The increase in the British total was 1,134,000 tons, and it may be mentioned that this year's figures, while representing a decrease in the percentage, constitute a record. Holland is second with 2,496,000 tons, an increase of 264,000 tons, which is 10.4

per cent. of the traffic as against 10.6 per cent., but in this case also the total is a record. Germany, who is continuing steadily to increase her share of the traffic, is third with 2,397,000 tons, an increase of 394,000 tons, giving a percentage of 10.2 as against 9.4. The total of the trade in merchandise was 24,201,000 tons, an increase of over two million tons on the 1927 figures. This development was almost entirely due to the expansion of the homeward traffic. The outward traffic totalled 8,673,000 tons, an increase of 331,000 tons, while the homeward traffic amounted to 15,528,000 tons, an increase of 1,798,000 tons. These figures indicate an increase in purchasing power in the East which should be reflected in the outward trade movement next year.

THE EXPANSION OF SPLIT.

In recent years Yugoslavia's chief port, Split, has undergone a marked development. For the period 1925 to 1927 the number of ships entering the port has averaged 7,570, while the gross tonnage of the shipping for the last of these three years amounted to 2,304,223 tons, which is easily a record. As regards the trade figures it is significant to note that the combined imports and exports for 1927 were almost double the total for 1913. The total for the imports was 1,625,824, while that of the exports was 6,595,162, the total being 8,220,986, which compares with 7,356,175 for 1926, 8,066,515 for 1925, and 4,436,551 for 1927. Naturally this development of the use of the port has strained the existing facilities, and a comprehensive improvement scheme is in hand.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Calcutta (Birkenhead, December 22).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 26).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, December 15); s.s. Hatimura for Bombay and Karachi (London, December 22).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 22, Swansea December 27).

Johnson Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 19); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 19).

P. and O. Line.—S.s. Ranchi for Bombay (London, December 21); s.s. Nagoya for Calcutta (London, December 22).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 22); s.s. Highland Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 29).

Ellerman and Papayanni Lines.—S.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); s.s. Algerian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool December 22, Swansea December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 28); s.s. Kyno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 29); s.s. Trentino for Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 5). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient ports.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company, Ltd., in November amounted to 38,626 barrels.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*BRITANNIA ...	Dec. 31	*ELYSIA ...	Jan. 29
†ASSYRIA ...	Jan. 11	†TUSCANIA ...	Feb. 12

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 11.

The Stock Markets during the past week have on the whole been fairly cheerful, the more reassuring bulletins concerning the King's illness being responsible for a little more firmness in the later part of the week. British Government stocks have, however, not been quite so firm, as a result of the continued outflow of gold. Industrials moved irregularly, uncertainty as to developments in Wall Street checking dealings in some of the American specialities. Home rails were inclined to pick up towards the end of the week on the hope that traffics may now improve and that the worst has now been discounted. Although general activity in the markets is now considerably below the level of a month or two ago there appears to be little slackening in issues of capital in one form or another. A number of new domestic flotations during the coming week are impending, in addition to a large loan—possibly nearly £4,000,000—for the Greek Government. This issue is expected to be in the form of 6 per cents. at about 89.

Home Rails.

Consistently poor traffic returns have led to constant declines in the price of Home Rails until these securities are in many cases standing at prices well below their true worth. In recent years the railways have been badly hit by two factors; the continued industrial depression, particularly in the heavy industries, and the growth of road competition. These difficulties have not passed, but there is reason to hope that they will be of less weight in the future. The rating relief scheme is expected to be of especial benefit to the heavy industries, which are very important customers of the railways. It should also assist the railways in competition with road transport, since rates paid by the former are to be reduced and freight rates lowered, while motor transport concerns are burdened with the petrol tax. Moreover, the powers the railways have obtained to develop their own road transport organisations, and a continuance of the policy exemplified in the agreements between railway companies and municipal road transport authorities at Sheffield and Rochdale, should be of material benefit to shareholders in British railways. At present satisfactory yields, con-

sidering the security of the investment, can be obtained on such prior charges as L.N.E.R., 4 per cent. First Preference (£6 14s. per cent.) or Southern Preferred Ordinary (£6 18s. per cent.). Of the junior stocks Southern Deferred yield £6 10s. per cent., and L.M.S. Ordinary £9 4s. per cent., a reduced dividend for this year being anticipated.

P. and O. Results.

There are some companies whose conservative dividend policy is a byword. Such a policy is in the best interests of the genuine investor, for the accumulation of substantial reserves and the distribution of only a portion of earnings in good years enables steady dividends to be paid, even when results are relatively poor. Moreover, the reserves augment the company's earning power which is reflected in the price the shareholder obtains when he comes to sell, or in higher dividends or bonus distributions at a later date if he continues to hold the shares. Nevertheless, a rise in dividend is naturally pleasing, particularly when it involves no departure from a policy of building up reserves. This is the case with the P. and O. Company, whose directors have just issued the report for the year ending September, 1928. The dividend on the deferred shares has been raised from 10 per cent. tax free to 12 per cent. tax free, in spite of the increase in capital in November, 1927. At the same time £92,050 has been placed to reserve whereas no such allocation was made last year, but the allocation to the debenture redemption fund was greater than this year. The report adds that the Indian export trade has increased in almost all the main items, the exports to Europe having doubled, which gives confidence as to the future. The company is in an exceptionally strong financial position as its reserves amount to £7,616,000, the capital and debentures issued being just over £16,000,000. On the 5 per cent. Debentures a yield of £5 2s. per cent. is obtained and on the deferred shares, which obviously contains possibilities of appreciation, the yield is £5 6s. per cent.

J. and P. Coats and Co.

An old favourite which has not attracted much attention lately is J. and P. Coats. While markets are quiet there is an opportunity for considering many sound industrials which are now available at lower prices than is usual, owing to the general depression of the Stock Market in the last few days. At such periods speculators who have been "bitten" on speculative deals may be forced to realise on good securities they would much prefer to hold, in order to meet their commitments on the speculations. Thus a general marking down of prices is always a likely corollary of the end of a "boom," and good shares can be picked up cheap. Coats have a well established reputation for their threads, and have a virtual monopoly in their particular line, in which great fluctuations in demand are unlikely. At the same time the financial management of the company has been particularly sound. The aim has been stable dividends and for the eight years since 1919, when the capital was increased by £10,250,000, of which £7,300,000 came from reserves the Ordinary dividend and bonus has been maintained at 17½ per cent. At the same time reserves have been increased, and, if the company continues to prosper, Ordinary shareholders can reasonably hope for some further satisfactory bonus distribution. The yield on the Ordinary shares is £5 6s. per cent.

The directors of the Burma Corporation have declared out of current profits an interim dividend (No. 12) of 6 annas per share for the six months ending December 31, 1928. They have also declared out of accumulated profits a bonus of 1 anna per share for the twelve months ending June 30, 1929. Both dividend and bonus will be paid on February 15 to shareholders registered January 15, free of Indian and British income taxes. Shareholders on the London register will be paid the dividend and bonus in sterling at an exchange of 1s. 6d. per rupee (equal to 7.875d. per share).

THE BRITISH INDUSTRIES FAIR.

Notable Exhibits at Birmingham.

From the standpoint that a direct index to the conditions of industry is to be found in the activity of "key" trades which serve the factories, the arrangements for the forthcoming Heavy Section of the British Industries Fair in Birmingham marks the most notable advance since the War.

This annual display of the latest British products is equally important to the manufacturer who is alert to improved means and devices for carrying on his business, as to the distributor on the look-out for new lines to sell. Each year, in every section of the Birmingham Fair, there are numerous exhibits of new industrial machinery, accessories, and tools, but on no occasion up to the present has this aspect achieved such prominence.

While the wholesale and retail distributors of hardware, hearth furniture, heating and lighting apparatus in gas, oil, or electricity, and household equipment in general will find many thousands of new products to interest them, the manufacturers who sell them these goods will have a wider field of their own to explore than in any of the nine preceding years.

The majority of exhibitors are still engaged in perfecting their new products for display, but the Birmingham Chamber of Commerce has already received intimations from some two hundred firms who have completed their plans for definite exhibits. In nearly every case they have new goods to show.

Some have three or more advances in machinery or apparatus; several as many as six or eight features entirely new to industry. Here are a few typical examples of products to be formally displayed for the first time:—New 6-spindle drilling machine, which permits six holes to be drilled at once where it has been the custom to drill them singly; dividing apparatus for milling machines with new feature for quicker holding and releasing; electric resistance furnaces of new type; adjustable spindles which drill holes either close together or wide apart; rubber lining capable of resisting corrosive and erosive liquids up to 110 deg. C.—"hitherto unheard of"; new tensile testing machine for rods, capacity 5,000 lb.; motor-car steering-wheel rim made from a single strip of material; improved welding rod; galvanising by electro-deposition (entirely new process); deep drawing device that converts any single-acting press into more than a double-acting press at will; outdoor condenser type bushing to comply with specification of Central Electricity Board; electric pyrometers with new systems of automatic alarms and control; combustor for the heat expansion of tram and wagon tyres; new one-man-worked concrete block-making machine; silent portable petrol-driven and electrically-driven air compressors; hack saw blades of increased durability; section ladders, staves and stiles, reinforced with steel, giving strength and security in excess of building regulation requirements; entirely new design of gas-tight and water-tight ironclad distribution boards, with fuse equipment, etc., giving absolute safety; "built-in" electric motors, suitable for driving machine tools, wood-working machinery, etc.—dispensing with all belts, ropes, and gears; special large size "drum" type separator, for dealing with foundry sand, shipyard refuse, borings, etc.; new portable blower for blowing dust out of electrical wind-

ings; new water-fall separator for extracting iron from pulverised fuel, foodstuffs, etc.; new magnetic rake; new developments of continuous carbonisation in vertical retorts for the manufacture of town gas; new portable machines for inoculating outdoor timber against fungi, rot and insects; high speed crude oil engines saving 75 per cent. of running costs by the use of residual oils; electric motor with reversing gear-box which gives instantaneous stop or reverse with motor running continuously in one direction.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Various Equipment.—The Section des Municipalites et Commissions Locales, Ministry of the Interior, Cairo, invites tenders for the supply of additional equipment, comprising a Diesel engine driven D.C. generator set, D.C. rotary balancer and accessories for the Kafr El Zayat Electric Station. January 31. (D.O.T.)

Telegraph Cable, Etc.—The Department of Posts, Telegraphs and Telephones invites tenders for the supply and delivery of underground telegraphic cable and accessories. January 16. (D.O.T.)

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 6,800 tons of asphalt required for the year 1929-1930. January 22.

Steel Book Cases.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of 115 steel book cases for the Royal Library in Cairo. December 31. (D.O.T.)

Paper, Etc.—Tenders are invited by the Ministry of Finance for the supply of paper, stationery, chemicals, for Photocopying Office, other miscellaneous articles such as canvas sacks, required for the year 1929-1930. January 31.

Damp Proof Braided Cords, Etc.—The Egyptian State Railways, Telegraphs and Telephones invites tenders for damp proof braided cords and plugs; structural steel, rivets, bolts and nuts; turnover levers complete; chamois leather.

Iron Money Safes.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron money safes. January 2.

Bridge.—The Ministry of Communications, Administration of Bridges and Roads, Egyptian Government, invites tenders for the construction of a bridge over the Canal Ibrahimieh. January 3. (D.O.T.)

Electric System.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a proposed electric system for Beba. January 24. (D.O.T.)

TURKEY.

Crushing Machines.—A Turkish firm is desirous of purchasing machines for crushing and drying valonea acorns. (D.O.T.)

Motor Patrol Boats.—A report has been received from the Commercial Secretary at Constantinople (Colonel H. Woods, O.B.E.) as to the possible requirements of the Turkish Customs Administration with regard to motor patrol vessels. Further particulars can be obtained by interested British firms upon application to the Department of Overseas Trade. Reference No. A.X. 7207 should be quoted.

For the first nine months of this year Greece's imports of motor cars totalled 1,606. The United States supplied 1,324 of the cars, France being second with 155 cars, while the figures for the United Kingdom were 36.

The Egyptian Department of Antiquities has made a very interesting discovery at Sakkara, where a red granite head has been unearthed which is believed, on reliable grounds, to represent Userkaf, the first King of the Fifth Dynasty, in view of the fact that the King's cartouches have been found in the vicinity.

The Secretary of State for India proposes shortly to make a certain number of appointments to permanent commissions in His Majesty's Indian Medical Service. Medical men (British subjects of European descent) who desire to be considered for appointment should apply to the Under-Secretary of State, Military Department, India Office, London, S.W.1.

A fusion is reported between the Banque Balkanique and the Banque Franco Belge de Bulgarie. The Banque Balkanique was established in 1906 and has a paid-up capital of 50,000,000 leva. The Banque Franco Belge de Bulgarie was established in 1920. Its paid-up capital amounts to 80,000,000 leva.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Smyra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Bralla.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Motors and Motoring.

By G. B. B.

Fault Finding.

Paradoxical though it may sound at first, the man best liked in the motoring world is probably he who is the best fault finder. By which I mean that he who can find, or using another word, locate, a fault, is always popular with that numerous class who, as soon as something goes wrong, have not the slightest idea either as to what it is, or its cause. The percentage of motorists possessed of some measure of mechanical knowledge was at one time as high as about 75 per cent. Now, with the great influx of owner-drivers who have become possessed of their cars on most advantageous terms, the probability is that the newcomers so greatly outnumber the old brigade that it is doubtful whether one in ten would be able to diagnose or cure a fault. The ear, as well as the eye, of a good driver should be always on the alert, and the slightest trace of irregularity in the note of the exhaust or the hum of the engine should be noted and the question instantly asked of the brain: Is that serious? Any unusual engine note, difference in sound of the transmission, or sounds resembling mice nibbling at a gear-box should not only be heard, but the expert driver should know like a flash what it is that is causing them and what is to be the remedy. The difference between the trained and the untrained driver is that one says, mentally, "I wonder what's the matter now—sounded like something wrong," and the other says, "That's the rear-cylinder plug gone west; I shall have to look out a spanner and change it."

Motor Insurance.

As I think most readers of THE NEAR EAST AND INDIA are aware, I do not endorse, by any means, all that is said in favour of compulsory insurance regarding third party risks. In fact, I am opposed to compulsory insurance in any shape or form, for various reasons which I may give in these columns sooner or later. I just mention the subject because the Editor of the *Light Car* says that with regard to the proposals to make third-party insurance compulsory, it is a debatable point whether it is not drivers who need to be so insured. If the owner is the man who is concerned, short-term policies similar to short-term licences surely would have to be introduced or hardships would arise. If, on the other hand, it is the driver who is concerned, similar difficulties, but of an even more elaborate nature, would possibly arise. Take the case of a man whose driving licence expired on, say, September 1, and who proposed to lay up his car during the winter months. He would not mind renewing his driving licence in order to have the benefit of the use of his car until the end of the month, but taking out a twelve-months' insurance policy, only the first three weeks of which would be of use during the first six months of its currency, would be intolerable. There is, as the Editor says, a possibility of the man who covers a small mileage and who lays up his car for a portion of the year, having to carry yet another burden which should rightly be borne by his big-mileage neighbour. These are matters which must receive very careful consideration before any scheme of compulsory insurance is passed into law.

Maintenance.

Whether a man owns a private car, a business car, or a fleet of commercial vehicles, the matter of maintenance is always of interest. Motor vehicles must be kept in good tune or else they become inefficient, and in the words of the old saying, "Eat their heads off." The basis of any plan of preventing trouble may be

summed up, according to a colleague, in just three words: Lubricate, tighten, and adjust. It sounds all right, but in my experience I find it is perfectly easy to over-lubricate, over-tighten, and wrongly adjust, so it is evidently of no more use calling out to motorists at large to lubricate their cams, tighten up their bearings, and adjust their carburettors or magnetos unless one makes quite clear what one means by the advice. But properly carried out, the importance of lubrication, adjustment and tightening to satisfactory and economical operations is self-evident. Because this work, or the lack of it, has such a far-reaching effect on the results obtained, it should be studied carefully by every operator, mechanic or owner-driver in order to make certain that what is being done is the best that can be done, and that it is being done properly.

Valves.

In modern engine work probably valves have been most improved during recent years, and in the engines of to-day they are expected to stand up to much more severe working conditions than did their predecessors of a dozen years ago, and also to stand up to those conditions for an exceptionally long working life. Of course, improved steels have had everything to do with this, and general improvement in engine durability has accompanied improvement in valve manufacture and design, and it may, I think, be said that engines now give about twice as much service before they need overhauling as engines did ten years ago. It seems, as Mr. James Cottrell said a day or two ago, quite logical to remove all carbon and grind in valves when, say, bearings are being adjusted or new rings put in place. But that work is not always necessary, and should there be no need for bearing adjustment or the fitting of new rings, may an owner-driver puts off his valve-grinding and carbon-cleaning business for a length of time that would have made motor owners shudder only a few years ago. Actually, the conditions under which valves operate to-day are much more severe than they were, simply because the demands made upon engines are greater. High speeds, rapid acceleration, greater power and improved flexibility are all embodied in the modern car, whether of the light or heavy type, and as the percentage of trouble on the road does not increase but, rather, steadily diminishes, it is evident that valve design and manufacture is keeping abreast of all requirements.

A branch of the Eastern Bank, Ltd., has been opened at Singapore.

The production of the Anglo-Egyptian Oilfields for the week ended December 7 was 5,183 tons.

A new seismic station of the U.S.S.R. Academy of Science is being organised at Andijan (Transcaucasia) in one of the regions where earthquakes are said to happen oftener than in any other part of the world.

The official report of the damage to the Temple of the Sun at Palmyra, in Syria, shows that the lintel of the inner gate has fallen, while fissures in the side pilasters and on the façade have widened. Measures of consolidation have now been taken, and the available funds will be devoted to this work instead of to excavation.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total shipments of Jaffa oranges up to December 3 amounted to 170,000 boxes, as compared with 212,000 boxes at the corresponding date last year. Transshipments in the present season amount to approximately 30,000 boxes, while 40,750 boxes had been despatched by rail via Kantara up to November 24. The heaviest arrivals in the United Kingdom from Palestine are after Christmas, but early shipments this season appear fully as heavy as usual, over 110,000 boxes being advised as due to arrive during December, with further shipments yet to be made for arrival during the month.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the period October 26 to November 20:—

Arrivals of old crop gum in Kordofan stations during the above period amounted to 26 tons, as against 56 tons last year. This brings the total of the Kordofan crop for the season 1927-1928 (i.e., from November last to this day) to 16,472 tons, as against 13,688 tons for the season 1926-1927, i.e., an increase of 2,784 tons, or 22½ per cent.

Arrivals of new crop gum in Kordofan stations (including Tendelti) amounted from October 26 to November 20 to 33 tons, as compared with 5 tons in 1927.

Prices.—Old Crop: Owing to the insignificance of the arrivals the prices paid cannot be taken as a basis for c.i.f. quotations, especially in view of the fact that no old crop stocks, so far as it can be ascertained, exist in the country.

Prices.—New Crop: The prices of El Obeid have remained practically steady around 78-79 piastres, i.e., a much higher level than the equivalent of the c.i.f. prices quoted for new crop.

Demand was generally fair and all markets bought something, the United Kingdom, France, Belgium, and Spain, however, showing little interest.

AILS CRAIG MARINE MOTORS.

Co-incident with the marked increase of public interest in motor boating, the past year has proved beyond question the popularity of Ailsa Craig Marine Motors. In the programme for 1928 plans were made for a considerable increase in production, and although the year is not yet completed, the results have proved more than a sufficient justification for an even bigger works programme in 1929—a programme that is the most comprehensive in the history of the company.

Speaking generally, there will be no drastic changes in the well-proved Ailsa Craig designs. The new VA type 40-60 h.p. 4-cylinder engine came into full production at the beginning of this year. It will receive its full share of attention in the coming year, and facilities for a 100 per cent. increase in output have been budgeted for. Judging by the present demand, even this generous provision is likely to be taxed to its limit, more especially as the success of the 40-60 h.p. engine has brought urgent requests for a larger size of the same design. In response, therefore, a six-cylinder model is now available. It is sensibly rated at 60-90 h.p., and is priced at £395 for the engine complete with enclosed flywheel and reverse gear. At this figure it has the standard fitments, including overhead hand starting with chain adjustment and impulse starter, so that the cost, compared with the smaller model at £242, fully maintains the company's reputation for a sound product at an extremely moderate price.

As might be expected, the remainder of the overhead valve series will continue to take a predominant part in the company's activities. This series includes the 10-16 h.p. 4-cylinder Ailsa Craig Kid engine with its 3-bearing crankshaft. New refinements have been incorporated, and it is a sign of the progressive policy of the company that these additions have been made without any increase in prices. For instance, the Kid engine with its new pump-trough system of lubrication and the new special scraper rings on the pistons is priced at the same low figure of £80 for the complete engine and reverse gear, while in the reduction gear outfit the gear is now of the Helical type, making it very silent and smooth-working; it is also even more compact than before. Here again, with such substantial advantages, the price remains the same.

Then there is the little "Silent Seven" 7/12 h.p. engine, which is the smallest British built 4-cylinder marine motor on the market. The standard model with combined engine and reverse gear in one unit is still listed at £72. Since the present year's programme was laid down a new model of this engine has been added which is popularly known as the "Chubby Z4." It is for use with a folding or feathering propeller without a reverse gear, and has been specially designed as a yacht auxiliary to meet the most restricted installation conditions. In fact, it is capable of being accommodated in the amazingly small space of 25 inches—a proof that it fulfils the most stringent requirements of the enthusiastic sailing man.

It is reported that negotiations are in progress between the Turkish Ministry of Finance and the Swedish Ericsson Telephone Company with regard to a contract for the installation of a telephone system to link up the chief towns of Anatolia.

In the quarter ended September 30, 726 motor vehicles were registered in the Bengal Presidency. The total was made up of 537 cars, 109 omnibuses, 14 public conveyances, and 66 lorries. In the Punjab 647 vehicles were registered in the June quarter, as compared with 488 in the March quarter. These totals included 206 and 201 cars and 368 and 260 lorries respectively.

On December 10 the famous rubber firm of Chas. Macintosh celebrated its 104th anniversary. One hundred and four years have seen great changes and developments in this business, not the least of which was the fusion of interests with the Dunlop Rubber Company, Ltd., resulting in the formation of Macintop, Ltd., the already well-known distributors of rubber goods. The union of these two firms creates a record in the rubber industry, giving them a joint age of 144 years.

COMPANY NOTES AND REPORTS.

SERVICE PETROLEUM.

The report of the Service Petroleum Company for the period from April 1, 1927 (the late of incorporation), to September 30, 1928, states that whereas full provision has been made in the accounts for administration, general, and other charges, including depreciation, covering a period of eighteen months, the accounts include the benefit of only thirteen months' operations of service stations and only a proportion of the dividend of £42,500 received from the Roumanian subsidiary for 1927. Nothing has been included in respect of operations in Roumania for the nine months from January 1 to September 30, 1928, as the accounts of the Roumanian company will not be made up until December 31, 1928.

The directors have been legally advised that the whole of the dividend received from the Roumanian company is revenue, but as the profits of that company include earnings prior to the Service company's formal acquisition of its shareholding, the auditors have advised the transfer of £31,500 of this dividend to a capital reserve, and the directors have decided to follow this recommendation. In this connexion the directors point that the Roumanian company, before paying the dividend for 1927, set aside approximately £37,000 for amortisation and reserves.

In view of the transfer of £31,500 to capital reserve and the non-inclusion of the benefit of the Roumanian company's operations for the nine months ended September 30, 1928, the accounts show a loss for the period of £22,873, against which it has been decided to transfer an equivalent amount from the share premium account. There remains to be carried forward a deficit of £21,840, being the amount paid by way of interim dividend on the company's original capital. It is proposed that the accounts of the Service company shall be brought into line with those of the Roumanian subsidiary at the earliest opportunity. In consequence of this it will be necessary to postpone the question of a further dividend until the accounts from Roumania for 1928 are received and the amount of the Roumanian company's profits available for distribution as dividend has been ascertained.

The directors add that the programme of the Romano-Africana S.A.R. is being steadily developed. Production from wells at Gura-Ocnitzei has shown for a few months a decrease, due mainly to technical and accidental reasons, but from the beginning of November this production has been steadily increasing. The company now operates in five fields, whereas at the beginning of 1928 only two were being worked. The first well in the Ceptura field started production on November 11, 1928, with 300 tons per day, and drilling of two other well has now commenced. Drilling in Moreni, Floresti, and Gura-Ocnitzei is progressing favourably; in the latter field one of three new wells is being deepened to the Meotie strata. Gallery works at Bustenari are approaching completion. Several valuable concessions on first-class proven lands have been secured during 1928, and an up-to-date rotary drilling equipment acquired. Sir George Thurston, Mr. C. A. P. Langham, Capt. Albert H. Farley, and Mr. Lincoln G. Valentine have retired from the Board. Mr. Paul Dormann, Prince M. Soumbatoff, Mr. Louis Coatalen, and Mr. Alfred Massenet have been appointed directors.

BARCLAYS (OVERSEAS).

The directors of Barclays Bank (Dominion, Colonial and Overseas) recommend a final dividend for the year ended September 30, 1928, at the rate of 8 per cent. per annum on the cumulative preference shares, less income tax at the rate of 9½d. in the £, and a final dividend on the "A" and "B" shares at the rate of 4½ per cent. per annum, less income tax at the rate of 1s. 7d. in the £, making, with the interim dividend paid in July last, 4 per cent. for the year. The variation from the usual rate of income tax is due to relief in respect of Dominion income tax in respect of years 1926-27 and 1927-28.

SUDAN CONSTRUCTION AND EQUIPMENT.

The report for the year ended October 31, 1928, states that since the publication of last year's report the following progress has been made in the construction of works undertaken by the company in the Sudan:—Harbour Works at Port Sudan: Four new coal transporters were completed on site and taken into service in February of this year; they are now in full working order. Ancillary works in connexion with South Town Coal Quays were also completed, and the quays were opened for public use in February to coincide with the working of the transporters. Further progress has been made with the extension of the main quays at the north end, and it is anticipated that the constructional work, together with crane tracks, etc., will be completed by the end of 1928. Two 70 ft. A.G.A. Beacons and two 20 ft. Post Lights erected in 1927 continue to function satisfactorily.

GEDAREF RAILWAY AND DEVELOPMENT (SUDAN).

The report for the year ended October 31, 1928, states that in last year's report it was stated that the first section of the line from Kassala to Gedaref, i.e., as far as River Athara at Abu Deleiq, a distance of about 40 miles, was completed, and certain preliminary work on the bridge site was carried out before the rains of 1927 caused the operations to be suspended. The second section of the line from Abu Deleiq to Gedaref, a distance of 100 miles, was commenced in December, 1927, and the line reached Gedaref on February 19, 1928. A temporary bridge over the River Athara at Abu Deleiq was used for construction trains up to May 10 this year, when a sudden rise in the river necessitated its demolition. A permanent bridge, 1,050 feet in length, consisting of seven 150 ft. spans, was, however, completed by the contractors, Dorman, Long and Co., in

July, and has since been in regular use for construction traffic. The whole of the railway from Kassala to Gedaref was opened in November for passenger, goods, and animal traffic. Orders for the necessary material for the extension of the line from Gedaref to Makwar were placed in February of this year. Up to October 31, orders to the value of approximately £1,450,000 for railway materials, plant, and rolling stock had been placed in England, Scotland, and Wales. Orders for ginning plants, materials for buildings, well boring, irrigation, etc., required in connexion with cotton and other development schemes in the Sudan, have also been placed in this country to the value of approximately £350,000.

STEAUA ROMANA (BRITISH).

The report of the Steaua Romana (British), Ltd., for the year to June 30 last states that the profit, subject to taxation, comes out at £95,801, of which the approximate liability for income tax is £20,970, leaving a net profit amounting to £74,831. The balance brought forward was £22,191; add proportion of deferred interest, £425, making an available balance of £97,437. The directors recommend paying a dividend on the ordinary shares for the year ended June 30 at the rate of 4 per cent. (less tax), placing to reserve for income tax £8,456, and carrying forward £24,981. The production of the Steaua Romana Company (Bucharest) for the year to June 30 last was 578,964 metric tons, compared with 485,580 metric tons in the previous year. During the five months July to November, the total production amounted to 300,273 metric tons, compared with 243,989 metric tons.

ASSAM-BENGAL RAILWAY.

The report for the year ended March 31, 1918, states that the balance on account of the company's surplus profits available for dividend is £17,627, from which must be deducted £7,500 on account of the ½ per cent. interim dividend, paid on July 1, 1928, and £28 for sundry payments. To this must be added £19,329 on account of the second half of the year ended March 31, 1928, £705 refund of balance of Dominion income tax relief for 1927-28, and £250 interest on deposits, leaving £30,384. The board recommend a final dividend at the rate of £1 10s. per cent., less income tax (after deduction of Dominion income tax relief) at 2s. 0½d. in the £, to be paid on December 31, 1928, in addition to the guaranteed interest, less income tax at 4s. in the £ due at that date, leaving £7,884 to be carried forward.

EGYPTIAN SALT AND SODA.

The gross profit of the Egyptian Salt and Soda Company for the year ended August 21, 1928, was £E74,010, against £E50,770. The net profit was £E68,072, compared with £E43,647. The Board proposes to set aside for the staff provident fund £E3,000, placing to reserve for renewals, etc., £E38,000, placing to a reserve to be devoted to the stabilisation of future dividends £E24,267, and paying a dividend of 2s. per share, equal to 10 per cent. (against 1s. 3d.) £E48,534, carrying forward £E1,737.

NEW COMPANY.

Conto has been registered as a public company, with a nominal capital of £750,000 (450,000 eight per cent. cumulative preference and 300,000 ordinary), to acquire the business of Contomichalos, Darke and Co., produce merchants and warehousemen, to adopt an agreement with the said company and the liquidator thereof, to carry on the said business and that of farmers, bankers, shipbuilders and owners, brokers, carriers, forwarding agents, etc. The directors are:—G. A. Contomichalos (managing director of Sudan Building and Agricultural Company); R. D. K. Curling (chairman of Sudan Building and Agricultural Company); D. Dalzell (director of Sudan Commercial Association); H. C. Drayton (director of Electrical Industrial and Investment Company); G. B. Halsehurst, shipbroker; E. H. Wenham, shipbroker. The registered office is at Bevis Marks House, Bevis Marks, E.C.3.

It is reported that Roumania has arranged for the purchase from Poland of 100 heavy type locomotives.

The annual meeting and dinner of the Chamber of Shipping of the United Kingdom has been provisionally fixed for February 21.

A company is being established in Luibliana for the production of cars of the Austrian Steyr type.

It is understood that an artificial silk factory is to be established at Teslic in Yugoslavia.

The annual general meeting of the Anglo-Belgian Company of Egypt will be held at 18, Moorgate Street, E.C., on December 18.

The Swedish Match Trust is reported to be negotiating for the acquisition of a number of match factories in Roumania.

H.M. Stationery Office has published as a White Paper (Cmd. 3236, price 1d.) an exchange of Notes recording a provisional Commercial Agreement between Egypt and Palestine.

Furness, Withy and Co. announce that warrants for the interim dividend on the ordinary shares of 5 per cent. in respect of the year ending April 30, 1929, being 1s. per share, less tax, will be posted on December 31 to shareholders registered on December 8.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 5:—

Egyptian Futures.

Sakel Contract.—Attracted by the strength of Alexandria and the firmness displayed by the American departments, a succession of small buying orders from speculative sources made their appearance in this market during the sessions immediately following our last report. Owing to the heavy local discount with overseas values and the consequent impossibility of importations, the floating supply of contracts here is restricted, and on this account values were quickly influenced; thus the fulfilment of the above-mentioned orders resulted in an advance of 34 points for near positions. At this level we attracted profit-taking operations; selling by houses acting for Egyptian interests was a feature of the week-end, and this, coinciding with a reactionary tendency in Alexandria, caused all the earlier advance to be neutralised. During the more recent trading renewed firmness has been witnessed, and whilst prices on the week only show signs of 2 to 14 points for near months and a decline of 7 to 22 points for distant positions, a good undertone is in evidence.

On Monday the Egyptian Government issued their second crop estimate; this showed a yield of 2,343,215 kantars, a figure in excess of that anticipated by the more optimistic "Bulls"; however, as exports are already well over the 500,000 kantar mark, the after-effects of the report were of short duration.

Trade reports, as far as this country is concerned, reveal a very moderate business in the finer counts, and the Sakel demand for both spot or forward cotton has latterly been very disappointing. It rather appears, however, as if the falling off in consumption in Lancashire is being counteracted by increased activity in other centres. Near positions have been in demand during the past few days and show a tendency to close up with the later spring and summer months.

Whilst the local position hardly tends to encourage the belief in higher prices, we will have to follow the course of the producing markets, and as sentiments in Egypt appears to be decidedly "bullish," values may easily be manipulated to higher levels.

Upper Contract.—With some easing latterly taking place in the American markets values in this contract show a moderate decline on the week, near positions being 7 to 11 points and distant months 8 to 11 lower since we last wrote. Stocks at this side are increasing rapidly, many firms usually outside the Egyptian market having availed themselves of the opportunity offered earlier in the season to import at a favourable basis. The result of the competition to sell this cotton is seen in the narrow difference ruling between the official F.G.F. quotation and the January position. The spot premium has narrowed to 10 on and may be reduced further. This means that unless holders are able to switch their hedges with very handsome-carrying premiums, heavy tenders will be experienced throughout next month.

Egyptian Spot.

Owing to fluctuations in the future markets values have shown a somewhat erratic tendency. A steady, quiet trade in Spot Egyptian has continued, which shows a distinct improvement on last week's offtake. On the whole, and especially bearing in mind the approach of another U.S. Bureau Report, the situation appears fairly healthy, and, provided no unlooked-for shocks are received on Saturday next, we have renewed hopes that spinners are gradually improving their position. We have little fresh to report in the local inquiry. The bulk of the Sakel business has again been for the "off" cotton, and there has been a recrudescence in the demand for "inferior" and very low Sakel at from 4d. to 10d. Fine qualities have failed to stimulate interest.

Uppers have been in steady request at from 25 off to 25 on January contracts, but the better grades still remain neglected. Pilon has been in improved request and the cotton looks right at current levels. There has been more interest shown this week in Nahda cotton. Summing up, we should say that spinners have definitely shown more interest this week, but when it comes to actual purchases, the later have seldom been anything more than retail in character.

C.i.f. business has been officially described as "quiet," and with this we are in full agreement. Considerable interest has again been shown in Sudan Sakels, and some good lines have been placed this week. Forwardings to spinners last week were returned as 8,643 bales Egyptian and 737 bales Sudan. Estimated spot sales for the week under review, 1,800 bales Egyptian and 3,000 bales Sudan. Quotations of Sakel are up to 20 points on balance. Uppers show a net decline of 15 points, and Pilon 10 to 15 points. F.G.F. Sakel to-day, 19.30d. F.G.F. Upper to-day, 12.45d. F.G.F. Pilon to-day, 13.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 29, state:—

Since our last report the futures market has been active, and prices show a considerable advance, more especially for Sakel. The week's summary of price movements is as follows:—Sakellaris: January, 38.43 dollars, 2.24 dollars up; March, 38.79 dollars, 2.02 dollars up;

May, 39.20 dollars, 2.00 dollars up; November, 1929, 39.33 dollars, 1.61 dollars up. Ashmouni: December, 23.24 dollars, 0.76 dollars up; February, 23.75 dollars, 0.70 dollars up; April, 24.28 dollars, 0.73 dollars up; October, 25.07 dollars, 0.55 dollars up.

Sakel.—The Sakel market has shown quite exceptional firmness, and all deliveries register material advances. The reasons for the strength of Sakel prices given in our last report can only be repeated this week; we can find no real commercial influence to justify the recent advance, and in our opinion it is simply the outcome of speculative manipulation. Spinners have still further curtailed their purchases, and the demand during the past few days from this source has been negligible, if not altogether non-existent.

Although it is true that the crop of Sakel will not exceed 2,500,000 kantars this season, to this must be added the Sudan crop, which promises to be larger than last year, and the carryovers of both the Egyptian and Sudan Sakel crops at the end of August last. All these make a very respectable total figure of supply and one amply sufficient to cover spinners' requirements, judging by their takings, which have steadily declined, particularly during the last two or three years, as a result of the competition from artificial silk and the reluctance of consumers to pay the high prices asked for fine yarns. This being the case, we do not think the advance can go much further; on the contrary, from a commercial point of view some reaction from present levels seems rather probable. The Sakel/Uppers straddle (January/February) this week stands at 1,468 points, against 1,314 points last week and 385 points at this time last year.

Uppers.—Notwithstanding the strong advance in the price of Sakel, and despite the appreciable rise in American, the Uppers market continues to look very heavy. The distinctly quicker crop movement of this year continues in full force, and hedging operations against daily arrivals are a continual check on prices. This is a condition, however, which cannot last indefinitely, particularly as the trade demand for Uppers continues strong, as is shown by the very satisfactory export figures. We therefore look for a gradual advance in prices as the crop movement quietens down. The Ashmouni-American straddle (December/January) this week stands at 255 points, against 250 points last week and 748 points at this time last year.

The week's receipts amount to 324,056 kantars, against exports 208,377 kantars; the stock in Alexandria stands at 3,227,316 kantars.

Spot.—The past week has given us another series of active markets at Minet el Bassal, but the resulting turnover is appreciably less than last week, and there has not been quite the same eagerness in the demand from abroad. Sales amount to about 30,200 bales, of which we estimate 9,100 bales Sakellaris, 18,400 bales Ashmouni

SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

and Zagora, 1,750 bales Pilon, 500 bales Nahda, and 450 bales other varieties.

Sakellaridis: A very fair business has been done covering all grades. Spot differences are generally well maintained and slightly dearer than last week.

Ashmouni and Zagora: A good business has been done, but the demand has fallen away somewhat. All grades have been dealt in. Spot differences are generally unchanged from last week.

Pilon: A fairly good business has been done in all grades. Spot differences are unchanged.

Other Varieties: Nahda continues in excellent favour with buyers and a good business has been done at excellent prices. In White a good business has been done. Spot differences are considerably dearer. Some small lots of Maarad and Fouadi have changed hands.

Up-country: This week there is again nothing special to report. In some districts the movement of the crop is still heavy; in others it has rather fallen off. The advance has rendered holders of cotton more difficult to deal with, and little fresh business has been put through. There is no unusual feature in up-country trading in Egypt; holders have a habit of throwing their cotton on a declining market, and are just as eager to hold in case of a rise. Business in new crop cotton has made a beginning, more particularly in Upper Egypt.

The India Office has given a contract to P. and W. MacLellan, Glasgow, for the steelwork required in the construction of a new railway bridge. This firm has also been awarded a contract for the supply of bridge spans for the Bombay, Baroda, and Central India Railway.

NEWS FROM ALL SOURCES.

Czechoslovak factories have obtained the largest share of a contract for the supply of agricultural machinery to Bulgaria.

The Ionian Bank recommends a final dividend of 3s. per share, with a bonus of 2s. per share, both free of tax, subject to audit, making 8 per cent., the same as for the previous year.

The production of the Attock Oil Company, Ltd., for November was 35,851 barrels. The increase is mainly accounted for by the new deep well reported on November 19, production from which is still satisfactory.

The statistics of shipping at the Piræus in November show that Italy was first with the number of ships entering the port, her figures being 54, of a gross tonnage of 108,954. England was second with 23 ships of a gross tonnage of 43,000.

It is announced that Sir Robert Waley Cohen, K.B.E., has accepted the invitation of the board of the African and Eastern Trade Corporation, Ltd., to occupy the position of chairman as from January 1 next, Mr. R. B. Miller having intimated his intention of vacating that position on the 31st inst.

The traffic receipts of the Suez Canal during November amounted to 19,030,000 francs, as compared with 17,910,000 francs in November, 1927, and 15,510,000 francs in 1926. For the period January-November, the total receipts were 200,980,000 francs, as compared with 188,990,000 francs for the same period of 1927.

Notes of the Week.

Serbs and Croats.

The Belgrade Government is still without any policy other than that of force to offer as a solution of the Serbo-Croat question. Accepting the resignation of the civilian Governor of Zagreb, who found himself in conflict with the military authorities over the events of December 1, it appointed in his stead a Colonel Maximovitch. The significance of this step is to be seen in the fact that hitherto military officers have been appointed Governors only in Macedonia, where conditions have been admittedly anomalous. To nominate a soldier at this stage to Zagreb was a provocative act on the part of Dr. Koroshetz or of those who compelled him to do it. Colonel Maximovitch's appearance in Zagreb was followed by a formal decision of the Council to have nothing to do with the new Governor, and this action in turn was countered by the Government with the suspension of the Council for a year. In the sequence of events the Croats are able to find ample confirmation from their point of view of their contention in regard to Serbia. No one, they say, disputes the military prowess of the Serbs or their heroic conduct during the Great War. It was supposed that these qualities carried with them a normal capacity for statecraft, which would justify a dominant position for Serbia in the new Yugoslav State. Croat experience, however, has shown that Serb qualifications, as far as they are reflected by successive Belgrade Governments, are suited only for a military camp; they reckon nothing of constitutionalism or of the modern conception of the liberty of the subject. While picked individual Serbs may make a satisfactory showing in the meetings of European statesmen, the standard of statesmanship displayed in the counsels of the State leave much to be desired. For ten years the situation in the country has been allowed to go from bad to worse, without any attempt on the part of the Serbs to meet the requirements of a kingdom composed of three or more separate peoples, until to-day the disruption of the State is threatened.

The Blindness of Belgrade.

It is fortunate for the Yugoslavs that the crisis in their fortunes has occurred at a moment when all the countries of Europe are committed to peace. The trouble is wholly domestic, but the internal weakness resulting from the quarrel between Serbs and Croats has reduced Yugoslavia to comparative impotence for the time being in Europe. The Belgrade Government may bluster and seek to intimidate Bulgaria or Albania, but it carries no weight in any other direction; it is to-day no match diplomatically for Greece, and even its subservience to French policy has outlived its usefulness from the point of view of Yugoslav interests. No one with any real knowledge of the Serbs will believe that the country is incapable of improving upon this state of affairs. The only explanation seems to be that Serbia has allowed herself to be governed by a body of men wholly impervious to outside influences and ignorant of all modern tendencies either in their own country or elsewhere. Whether responsibility for this unfortunate condition of things attaches to Belgrade politicians or to a clique in the background to which these politicians have subordinated themselves can be known only to the Serbs themselves. The effect is the same for the unfortunate country. Despairing of making any impression on the mediæval mentality of Belgrade, the Croats argue that the whole of Yugoslavia cannot be held back in the march of civilisation to keep pace with the lagging steps of the Serbs. The hope that Belgrade would assimilate the progressiveness that Croatia and Slovenia inherited from the Austro-Hungarian Empire has not been realized, and the desire is now paramount in the non-Serb provinces of the Kingdom that each territorial division should be allowed to advance in the material sphere at its own rate of progress. Economic considerations play an important part in the Serbo-Croat quarrel; there is the incompatibility of temperament, as well as the disparity in the stage of civilization that the two peoples have reached, but the culminating grievance

is unfairness of the policy that taxes Croatia for the sole benefit of Serbia. Not without reason, in view of their past history, the Croats ask whether they can be expected to suffer indefinitely at the hands of Belgrade what they did not tolerate from Budapest. So complete, however is the blindness of Belgrade that it does not realize that a policy which sufficed to disrupt a "ramshackle" Empire may have equally disastrous effects in a smaller kingdom composed of even more discordant elements.

The Need for a Constructive Policy.

The Croats will do well to remember that the more justification they find in their criticisms of the Serbs, the greater the need on their part to provide the constructive policy which they cannot obtain from Belgrade. The relations between the two peoples have become much worse since the declaration in Croatia of a boycott of the Belgrade Government, and it cannot be pretended that such a step was calculated to produce an understanding between the two parties. Moreover, as time passes, the boycott is proving a double-edged weapon; for Croat business is being affected by it, and a certain restlessness on the subject is being displayed in Croatia, which can hardly strengthen the hands of the Peasant-Democrat Group. The Croat leaders need to keep their goal very clearly in view and to see that each step that they take is likely to bring them nearer to it. As they cannot challenge—at least at present—the military strength of the Serbs, their main hope of reaching their goal is by way of agreement. They should, therefore, contrive to emphasize their resolve to have federal autonomy, without closing the door to negotiation. As things are, they have made it almost impossible for any practical step to be taken for securing the realization of their aims. A solution of Yugoslavia's present difficulties can be found only in a round-table conference, and to render such a conference out of the question is to postpone indefinitely the solution for which they are striving. Having recorded their opinion of the Serbs, the Croats should have been careful not to imitate the Serb obstinacy of which they complain. In withdrawing from the Skupshtina they had made their attitude towards the Serbian régime quite plain, and from that point every opportunity ought to have been taken to make the inevitable surrender of the Serbs easier for them. In the place of this policy the Croats have shown an inclination to play into Serb hands, by affording openings for the exercise of those qualities in which the Serbs excel. They are thus no nearer a solution of their difficulties than they were on the day of the Skupshtina murders; and whereas by tactfulness they might have obtained the services of King Alexander as a mediator between themselves and the Serbs, they have allowed the latter to monopolize him as the patron exclusively of the Radical Party. The first thing to be done now is to avoid all further intensification of bitterness between Serbs and Croats, and to set out to discover, either in Yugoslavia or abroad, someone who can act as mediator between two peoples not on speaking terms with one another.

Progress in Egypt.

Under the title *Egypt*, a small broadsheet has been published by the Egyptian Association in London for the purpose of showing how bad things are in Egypt at the present moment. It does not appear at first sight a very worthy or a very exhilarating object, but clearly it affords considerable satisfaction to a group of Egyptians among whom an ex-Cabinet Minister assumes the rôle of High Priest. The British public has little difficulty in recognizing good and bad governments, and its innate fairness prompts it to listen to both sides of any question. At the same time it has a shrewd idea that a party in opposition is inclined to give a one-sided view of the situation in any given country, and it will instinctively try to

check that view with independent evidence from the country itself. In the case of Egypt a score or so of foreign correspondents and a thousand score of annual visitors enable a fairly reliable judgment—at least in general outline—to be formed of the situation in that country. When, therefore, a broadsheet attempts to depict conditions in Egypt in language which has hitherto been reserved for Russia, and then only at the worst period of the Bolshevik régime, the verdict of the ordinary reader will be that, if this is the considered judgment of the Wafd, no wonder that some saner Egyptians found its administration of the country a failure. The saying that a country has the Government that it deserves has varied applications. When Egypt allowed itself to be stampeded by extremists, it was perhaps receiving its deserts, as the Administration got nothing done. Now that the patience and good sense of an industrious population have reasserted themselves, it is in keeping with the adage that the country should have its material needs looked after—irrigation for the immediate present and the future, adequate water supplies for domestic purposes, hospitals and sanitation, and above all the putting into circulation of large sums of money, the withholding of which under a Wafdist régime was responsible in large part for the financial stringency in the country. If there should be Wafd extremists who cannot appreciate the advantage of these achievements, then, may it not be that the Government against which they rail so loudly is precisely the one that they too deserve?

A Medical Congress in Egypt.

This week yet another Congress has been added to the list of international gatherings which have availed themselves of Egyptian hospitality under King Fuad's enlightened initiative. The meeting of the International Congress of Tropical Medicine and Hygiene in Cairo coincides with the centenary celebration of the Cairo Faculty of Medicine. The first association of Kasr El Aini Palace with medicine dates from the time of the French occupation of Egypt; but, after being used as a military hospital during the first three or four years of the nineteenth century, it reverted to other purposes until 1837, when a medical school founded ten years previously was transferred to it, together with the hospital with which the name of Kasr El Aini has ever since been connected. For the last forty-five years the Kasr El Aini Medical School and Hospital have relied largely on British co-operation, and to-day when the School has the status of the Faculty of Medicine of the Egyptian State University that co-operation is successfully maintained. The School and Hospital have both outgrown their present accommodation, and advantage is to be taken of the present Congress for the ceremony of laying the foundation-stone of a new hospital and medical school on Roda Island. Egypt's position at one of the world's cross-roads exposes her in a special way to the dangers of infection, and it is of interest to note that she is making a point of building up a sound Public Health Service, of facilitating medical research work in her midst, and of insisting upon a high standard for her own medical profession.

Tales of Arabia.

Arabia appears to be the country *par excellence* for journalistic "stunts." When it is not Basrah it is Jerusalem that offends. The latest story from the capital of Palestine concerns the Hijaz, although why it should be from Jerusalem that news comes of the Holy Land of Islam is no more clear than, say, why Mecca should know what is going on on the borders of Trans-Jordan and of Iraq. The message states, however, that two powerful tribes in the Hijaz have started against the King of the Wahhabis a revolt which is likely to spread throughout Arabia. Even if the first statement were true—and confirmation so pathetically fails the usual

flights of fancy in Jerusalem—what possible evidence is there for the second? On the contrary, all the available evidence points to King Ibn Saud's having as strong a grip as ever on his tribes, and these stories, now of the revolt of the Mutair, or of the Ataibah, now of the Harb, must be treated with all possible reserve. Manifestly they emanate from enemies of the Wahhabi régime, although what effect they can possibly have except to scare the timid from making the *Haj*, preparations for which have, of course, already begun, it is difficult indeed to see. These wild tales from Arabia are little credit to the journals which publish them.

A Turkish Christmas.

The *ballon d'essai* of a Turkish newspaper which suggests that Turkey should celebrate Christmas does not necessarily imply that Mustapha Kemal Pasha is about to introduce Christianity officially into the Republic. The President is essentially of a practical rather than of a religious turn of mind. He found that certain excrescences, as it were, of Islam were calculated to retard the development of the Turkish people on modern lines and he abolished them. It was also considered as an anomaly that Turkey, which has much leeway to make up in the economic sphere, should be unable to transact business on two days of the week through having to observe the Muslim Friday and the Christian Sunday, apart from the observance of a Saturday Sabbath by the Jewish community. Accordingly, it is proposed to accept Sunday as the single day of rest for the whole country. In the same way the celebration of Christmas, if it should be carried through, would be a practical acknowledgement of Turkey's relationship to the European business world, which keeps holiday at that period of the year. It would create little surprise, if Mustapha Kemal Pasha decided that Christianity was a more progressive religion than Islam, and hoped that its formal adoption by Turkey would, in conjunction with the introduction of Latin characters in the writing of Turkish, facilitate the modernizing of the country. Christianity, it is true, has become synonymous with civilization, but whether that which in it makes for progress can be acquired by edict without any other basis is a matter likely to provide discussion, certainly outside Turkey, if not within it.

INDIAN NOTES.

Burma's "Yes."

By forty-nine votes to twenty-nine the Burma Legislative Council last week decided to co-operate with the Statutory Commission when Sir John Simon and his colleagues visit Burma early in the New Year. The size of the majority is explained by the favourable vote of the People's Party and is somewhat unexpected, as it had previously been understood that the strongest and most popular of all the political parties in Burma would support the boycott movement. In a manifesto published on the eve of the recent elections, the policy and programme of the party were defined as "the attainment of full responsible self-government for Burma as a separate unit within the British Commonwealth." The programme designed to that end consisted of ten major points, the first two being "to boycott the Simon Commission"; and "to work for speedy Burmanisation of public services as defined by leaders in the Legislative Council." The other eight points referred to matters of local interest, such as education, water supply, the Village Act, etc., and, last but not least, the possibility of achieving total prohibition in the near future. From the beginning it was difficult to see what the party hoped to gain by boycotting the Simon Commission, as it numbers among its members many able men who would undoubtedly be in power if they were prepared to co-operate. We are not therefore surprised

to find that U. Pu, one of the leading members, has been elected President of the Council. Moreover, the desire for separation from India—a demand which, as Lord Irwin was reminded so often on his recent visit, is rapidly gaining in strength and influence—is not likely to appeal to Indian politicians anxious to demonstrate the uniting of the country and the essential kinship between Burman and Indian. Meanwhile, as we go to press, we learn that at a Conference convened by the General Council of the Association in Calcutta last week and attended by delegates from all the provincial organisations, the members of the European Association adopted unanimously a resolution according the fullest support to the memorandum recently presented to the Statutory Commission by the General Council. An abridged version of the statement appeared in *THE NEAR EAST AND INDIA* of September 20.

The Assembly Secretariat.

Notwithstanding persistent rumours in the Indian Press to the contrary, the Government of India announced last week that the Secretary of State has sanctioned the financial measures which had to be submitted to him in connexion with the establishment of a separate office for the Legislative Assembly. That is to say, Lord Peel has agreed to the creation of the posts of Secretary, Deputy Secretary and Assistant Secretary to the Chamber, for which Mr. V. J. Patel and a large number of non-official members have been so long pressing. It is also understood that the Secretary of State has approved in principle at the same time the Government of India's proposals for the separation of the Assembly establishment in place of the existing system, whereby the officials of the Chamber's Secretariat have belonged to and been under the administrative control of the Legislative Department. The question, it will be recalled, was raised anew by Mr. V. J. Patel last summer and discussed in the Assembly on September 22, when Pandit Motilal Nehru's motion, embodying the views of a majority of the non-official members of all parties, was adopted, the Government members remaining neutral. If last week's announcement means that the scheme as adopted by the Assembly has been approved in all important essentials, the new office will presumably not be an attached department under the aegis of any member of the Executive Council, as was the original intention of the Government of India. Instead, it will be constituted as a separate department included in the portfolio of the Governor-General in the same way as the Foreign and Political Department is at

THE NEW ROUMANIA.

A general election in Roumania has produced yet another political "landslide"; but this time it has not been brought about by the traditional abuse of power. In certain constituencies, no doubt, the adherents of the National-Peasant Party have worked off an accumulation of grievances against local political opponents by interfering with the free exercise of the ballot; but nowhere does it appear that the authorities have mobilised police, gendarmes, or troops to prevent Opposition parties from voting, after the methods associated with former Governments, nor is there any suggestion that voting papers have been deliberately destroyed and urns "lost." The achievement of the National-Peasant Party under the new conditions is, therefore, the more significant. In a Chamber of 387 seats the Government can claim 333 for their own National-Peasants, as well as the support of eight Social Democrats and seven German deputies; of the thirty-nine Opposition seats thirteen belong to the Liberals, sixteen to the Magyars and five each to the Yorga-Averescu Coalition and to Dr. Lupu. Whether such an overwhelming majority is good for any Government is a matter of opinion; in Roumania at least it is understood and is regarded as normal. In the present instance it should simplify the task of Dr. Maniu, who has a big legislative programme before him, if he is to carry out in the lifetime of the new Parliament any considerable portion of the reforms badly needed by the country. The whole political system built up during the last ten years by previous Governments has for the most part been so mercilessly condemned by its fruits that in many cases the opposite policy will at once commend itself without discussion. Dr. Maniu's Ministry, however, may be expected to aim at something more lasting than mere party triumphs. It is called upon to lay foundations on which subsequent Governments can build as the experience and the development of the country require, and not to imitate its predecessors in running up a temporary structure merely for the immediate gratification of a small section of the people. As a first move in the right direction the liberty of the subject has been assured by the abolition of martial law and the suppression of the censorship; at the same time a new spirit is to be infused into the gendarmerie, which will be used for the purpose of maintaining public security and not as a political weapon for the benefit of the party in power.

Roumania looks to Dr. Maniu for something more than policies identified with a particular school of political thought. He has to raise the country in its own conceit, by eliminating practices which have gone by the board in other countries of the level of civilisation to which Roumania aspires. The traditions and habits of generations are not going to be changed overnight, and it is to be hoped that neither abroad nor by Roumanians will Dr. Maniu and his fellow-Ministers be expected to work

miracles. He has the advantage of having publicly denounced for some ten years the practices which he now has it in his power to eradicate. The country knows of and approves the better course, but awaits the stimulus of leadership to enable it to follow that course. As a beginning, it has responded to the correctness of the conditions under which the recent elections were held by according a great victory to the present Government. The complete elimination of corruption may prove a slow process, but when once it has been applied at the top, one incentive to corruption in lower strata will have been removed. An essential step is the payment of adequate salaries to officials. In this matter, as at every turn of the reform movement, Dr. Maniu's Cabinet will be handicapped by the financial situation of the country. It takes over a bad heritage from its predecessors, and in this particular one that cannot be hurriedly improved by a stroke of the pen. The current Budget to which the new Government succeeds must close with a substantial deficit, and this deficit can be met only from extraordinary revenue, by loans or reparation payments from abroad or by a temporary arrangement with the National Bank. For the purposes of a foreign loan, however, it is essential that Roumanian Budgets should show equilibrium; and this is more likely to be attained in the first year by drastic reduction of expenditure than by any marked improvement in revenue returns. Not until radical changes have been made in the fiscal policy of the country can there be much hope of a considerably enhanced revenue.

The economic policy of the new Government, it is announced, is to be based on the fact that Roumania is an agricultural country and that, consequently, the existence of all other branches of production depend on the satisfactory condition of agriculture. It is significant that Greater Roumania should have had to wait ten years for the adequate appreciation of this fact. Four-fifths of Roumania's territory are in the hands of the peasantry, and if the revenue of the country is to expand, it is essential that the peasants' capacity for production should be increased. To this end an attempt will be made to round off agrarian reform and to eliminate certain abuses which have crept into it. There is to be a revision of the Customs tariff and of transport charges; agriculturists are to be afforded cheaper credit and facilities for marketing their produce. The co-operative system is to be encouraged and helped, land is to be reclaimed and export taxes will be reduced, with a view to their abolition as soon as the financial situation permits. One of the problems before the new Government is to teach the peasants to help themselves and to raise their standard of living. Since the introduction of agrarian reform, there has been a tendency among them to accept their new holdings merely as a means for obtaining more easily the same livelihood as before, or if they have produced more, it has been only the amount that they could themselves consume. Until the general standard of living among the peasants has been raised, and they have discovered that, to meet the new wants, they must produce more than they need for their own requirements, there is not likely to be any striking improvement in agricultural production. One of the many mistakes of previous Governments has been to imagine that industrial development could be artificially promoted in the country without any home market for the goods that were to be manufactured. The demand for the goods must come first. If four-fifths of the population are to remain satisfied to produce only what is sufficient to feed them and to provide them with clothing, it is evident that Roumania is liable to suffer from financial stringency for some time to come. Fortunately for the country the new Government brings to bear on the problems before it a wider and healthier outlook than its predecessors did, and the introduction of a general contentment among the people may make for a more rapid material advancement than was possible in the atmosphere of discontent which the harsh measures of the previous régime engendered.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, December 13.

Events in Zagreb.

The tragic events of December 1, which plunged Zagreb once again into mourning for sons killed in the struggle for the achievement of their political ideals brought in their train a whole series of after-effects. Most striking of these was the placing of M. Peter Zreletz, the Veliki Jupan (Governor) of the Zagreb District on the retired list on the grounds that he did not take adequate measures to prevent the disturbances on December 1, which marred the celebrations of the day of Yugoslav union and led to the death of one youth and the wounding of several others. At the same time, General Uzun-Mirkovitch, who is reported to have quarrelled with M. Zreletz in front of the Cathedral immediately after the unfurling of the three great black flags which began the trouble, was moved from Zagreb to Skoplye for having interfered with the civil authorities. It is reported that he has asked to be pensioned and that his request will be granted. In place of M. Zreletz Colonel Vojin Maximovitch, Professor of Military History in the Military Academy, was appointed as acting Veliki Jupan. It is highly unusual for an active military officer to be appointed to a post of civil administrator, and a curious point about this measure is that from his conversation with M. Zreletz on the morning of December 5 it appears that Dr. Koroshetz, Premier and Minister of the Interior, had no idea whatever of the step which was to be taken that very evening without even the leaders of the Four Coalition parties being informed or consulted. M. Pribitchevitch deduces from this sequence of events that Dr. Koroshetz was forced to take this step, perhaps against his will, at the dictation of the Minister of War, General Hajitch, but there is no proof available of the correctness of this surmise. Even in Belgrade this appointment led to considerable discontent. M. Yovan Yovanovitch, leader of the Serbian Peasant Party, declared it to be unwise, and compared it with the unsuccessful attempts of Hungary in 1905-08 to rule Zagreb through special commissioners. M. Davidovitch sent a special letter to Dr. Koroshetz protesting against so important a decision, with which he strongly disagreed in principle, being taken without his being consulted or even informed, and this has increased the friction already evident between the Radicals and the Democrats and threatened to break-up the Four Party Coalition—a danger which has not yet passed.

Zagreb and the New Governor.

In Zagreb the appointment of an active military officer as Veliki Jupan aroused tremendous indignation—especially as he was merely a Colonel, whereas a Veliki Jupan takes precedence over a Lieutenant-General. They com-

plained in Zagreb that they were being treated as though they were a small provincial town like Skoplye or Shtip, and pointed out that since the Civil Service Act lays down that a Veliki Jupan must have a Law Degree and fifteen years of State service the appointment is illegal. To the quibble that Colonel Maximovitch is only Acting Veliki Jupan, they reply by pointing out that the Act says that only the senior Law officer of the District can act for the Jupan in his absence. On these grounds the Zagreb District Parliament refused to accept the appointment, and called upon M. Uzorinatz, the Governor's representative, to leave the meeting they held on December 10. When he refused to do so the whole body of members rose and filed out, leaving him in solitary glory. When M. Uzorinatz had left the building the members crept quietly back and continued their meeting long enough for the President to declare the Parliament adjourned indefinitely. When the Governor's representative returned bearing a decree closing down the Parliament he found the building completely deserted. The District Parliament has complained to the State Council of the alleged illegal appointment of a non-qualified person at District Governor.

It is reported that Dr. Koroshetz, in agreement with the Radical Party led by M. Vukitchevitch, has prepared a whole series of amendments to existing laws, which will make illegal many of the present activities of the Zagreb parties and especially of the Zagreb District Parliament, which appear to him to be against the interests of the State.

Students Imprisoned.

The imprisonment of several students involved in the disturbances of December 1 in Zagreb led to strong protests from the Students' Union of Zagreb University. When their comrades were not set free after several days they declared a strike, and forcibly prevented their fellow-students from attending lectures. The University was closed for several days to prevent damage to property, but when it was re-opened again on December 10, the striking students chartered omnibuses and went from Faculty to Faculty breaking up lectures, with little opposition from either professors or students. The Government is reported to be preparing strong measures for dealing with such cases should they recur, and for the time being the Defence of the Realm Act, the ample clauses of which were designed to procure the suppression of the Communist movement in Yugoslavia in 1922, has been resurrected, and will be applied strictly in Zagreb to check the activities of the Peasant-Democrat Coalition leaders.

New Complications for the Government.

Every day seems to bring new difficulties and new complications to the Belgrade Government. M. Davidovitch has been growing increasingly dissatisfied with the posi-

tion of his party in the Coalition Government and has made several rather ineffectual attempts to secure the revision and the strengthening of his own position therein. His letter to Dr. Koroshetz angered the Radicals, already at loggerheads with him, and led them to declare that they can stand his constant threats no longer, and that they will themselves break up the Coalition, if he persists in attacking them. Some of them even went so far as to refuse to support the Budget proposals brought forward by the Democrat Minister of Forests and Mines, M. Pera Markovitch, and this "disloyalty" incensed the Democrats still further. But a breach has so far been avoided, although no one really knows how.

The Government's situation is further jeopardised by differences in the ranks of the Radical Party itself, where the breach between M. Vukitchevitch's followers and those of M. Atsa Stanoyevitch and the Central Committee of the party is by no means bridged. The Vukitchevitch group is highly indignant at present owing to the filling of vacancies in the Central Committee with members alleged to be personal friends of M. Atsa Stanoyevitch.

Although both sides indignantly deny that any negotiations are going on between them, movements are taking place below the surface of political life which, even if unofficial, represent a certain desire for contact between the Belgrade and the Zagreb leaders. On his return from a very successful conference at Pozarevatz (which marks, by the way, the extension of the Independent Democrat Party's activities into Serbia proper), M. Vilder, an I.D.P. leader, is reported on very good authority to have had a secret conference with M. Davidovitch. Later M. Teslitch, an industrialist from Sisak, known to be a great personal friend of M. Pribitchevitch, came to Belgrade, and after conferring with M. Davidovitch and M. Savchitch, was received in audience by King Alexander. He then went to Zagreb and conferred with M. Pribitchevitch. Long interviews during the last few days between M. Davidovitch and Dr. Spaho are interpreted as meaning that M. Davidovitch is trying to win Dr. Spaho's support for strong action against the Radicals and Dr. Koroshetz. But despite all these signs of uneasiness, it is believed in some circles that the Government will remain in office until the new Budget for 1929-30 has been passed.

Another significant fact is that, besides the success of the I.D.P. conference at Pozarevatz, this party did very well in the election of officers of the Students Union in Belgrade University. They obtained almost as many votes as the Radicals, who until recently completely controlled the affairs of the University. These indications seem to suggest that the Peasant-Democrat Coalition is growing to be, not a merely local, but a national force.

Cairo, December 7.

The Court at Cairo.

This week King Fuad ended his sojourn at Montaza Palace, near Alexandria, where he and the Royal Family had been since the middle of the summer, and the Court is now again in residence at Abdin. King Fuad had a very warm reception all the way from Alexandria, and again on arrival in the capital. In honour of the occasion of his return the city was brilliantly illuminated at night, and a banquet of a hundred and fifty covers was given

by the Governor, Mahmud Sidky Pasha, at the Semiramis Hotel.

The Residency.

Owing to the arrival of the Prince of Wales on his way to England the High Commissioner abandoned his trip to Sinai on which he was to have started this week. Lord Lloyd met the Prince at Suez and brought him by special train to Cairo, where His Royal Highness spent a quiet day at the Residency, the only engagement of any official character he kept being a visit to King Fuad in the afternoon. The Prince left again in the evening for Port Said where he rejoined the *Enterprise*, being accompanied by Lord Lloyd, who on his way back to Cairo put in a few hours' shooting at Ekiad.

Earlier in the week Lady Lloyd paid a visit to Alexandria. She lunched with Mr. and Mrs. R. C. P. Carver at their residence, and afterwards went to Claridge's Hotel, where she opened the annual bazaar in aid of the local Y.M.C.A. There was an excellent attendance, and the bazaar, for which the leading ladies in the various communities held stalls, proved a great success.

The Persian Treaty.

The Minister for Foreign Affairs, Dr. Hafez Bey Affifi, announced this week at an informal tea party, which he gave to the representatives of the Press at the Foreign Office—a pleasing innovation and a courtesy which were greatly appreciated by all concerned—that the Treaty of Friendship and Establishment with Persia had been signed by the Shah. The main lines which this agreement follows were set forth in my letter of October 8, and can be summarised as follows: Persia renounces her privileged position in Egypt and her right to appoint as Consuls Egyptian subjects who would thus be able to escape local jurisdiction. The Mixed Courts will no longer be competent in civil and commercial nor the Persian Consular Courts in criminal matters. In all these Persian subjects in Egypt will be amenable to the local jurisdiction, while in questions of personal status they will come within the jurisdiction of the Mehkema Sharia, which will apply the rules laid down by Persian law. Reciprocal treatment will be accorded to Egyptian subjects in Persia. The success which has attended the negotiations of this treaty is due to the great ability shown by the Egyptian Minister at Teheran, Hassan Nashat Pasha, who is now in Kabul obtaining the signature of King Amanullah to the Treaty of Amity which has been arranged between Egypt and Afghanistan. As soon as he has concluded this task Nashat Pasha will return to Egypt preparatory to taking up his new appointment as Egyptian Minister at Berlin.

British Chamber of Commerce Luncheon.

The monthly luncheons of the Cairo section of the British Chamber of Commerce of Egypt were resumed this week, and the Committee and the Secretary, Mr. Trimen, are to be congratulated on the success which continues to attend this venture. Over seventy members, including some from Alexandria and Port Saïd, assembled at the Continental Hotel, where these luncheons are held, under the chairmanship of Mr. R. S. Martin, Chairman of the Cairo Committee, the guests of honour being Mr. Lomas, H.B.M.'s Consul, and Mr. Turner, the new Commercial Secretary at the Residency. The Chairman gave details of the work which the local committee is doing, including the creation of special sections directed by leading mer-

EGYPTIAN GOVERNMENT.

EGYPTIAN GOVERNMENT. FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of LECTURER IN ZOOLOGY.

The salary offered is from £700 to £800 per annum according to qualifications. The appointment will be in the first instance on contract for three years, subject to cancellation on three months' notice being given on either side.

Travelling allowance, equivalent to one month's salary, will be paid to the successful applicant if resident in Europe.

Applications should be addressed to The Dean of the Faculty of Science, Egyptian University, Cairo, and should be received before January 1, 1929.

chants to deal with the textile and motor trades, and asked the community to suggest any other directions in which the Chamber could be helpful to British trade. He extended a warm welcome to Mr. Turner. The latter in his reply of thanks said that his Chief, Lord Lloyd, and he himself were fully alive to the importance of extending British trade in this country, and that, if the community would only let him know what they wanted, they could always rely on receiving all the assistance that it was within the power of the Residency to give them. Just before Mr. Turner rose to speak a telegram was received from Mr. R. C. P. Carver, President of the Chamber, regretting his inability to come up from Alexandria to attend the luncheon, and extending the welcome of the Chamber to the new Commercial Secretary.

The Royal Opera House.

The winter season at the Royal Opera House has now opened with a short series of French Comedies under Jean Hervé, Sociétaire of the Comédie Française. It will be followed, as usual, by Italian opera, for which several of the leading singers from the Paris Opera have been engaged, and by a series of musical and other novelties. During the past few years the season at the Opera House has proved disappointing both in achievement and programme. This year the Egyptian Government has entrusted the concession to Commendatore Dalbagni, who is well known in Egypt as a successful impresario, and under whose direction the new season, breaking away from the time-worn routine which marked its predecessors, promises to be brilliant.

A Well Deserved Distinction.

The distinction conferred on Dr. Aly Ibrahim Bey by the Royal College of Surgeons has given great pleasure in all circles. Egyptians regard it as an honour to their country and of good auspices for the future of the new Faculty of Medicine of which he is the Sub-Dean, while his colleagues, foreign as well as Egyptian, welcome it as a well deserved recognition of his ability and skill. Indeed, it is no exaggeration to say that even in European countries Doctor Aly Bey would rank with the best of his profession, and it is no doubt because he and his colleagues recognize this that the President of the College of Surgeons, Sir Berkeley Moynihan, will make the unusual departure of personally conferring the honour on Dr. Aly Ibrahim when he comes to Cairo in a week's time to attend the Tropical Medicine Congress which is to mark the centenary of the Kasr El Aini School of Medicine. As a matter of fact the latter has once before received this honour, when Dr. Keatinge, then its Director, had conferred on him the Honorary Fellowship for his work at the school. But this is the first time that an Egyptian has been so honoured.

ABYSSINIA.

Addis Ababa, November 27.

Arrival of the British Minister.

His Britannic Majesty's Minister, Mr. S. P. R. Waterlow, arrived here by special train on November 25. Mr. Waterlow, who comes from Siam, replaces Mr. Bentinck, who has been transferred to Peru.

The new Minister was met at the station by representatives from the Abyssinian Government, and from the Legation and British community. Apart from the Legation staff, the British community here numbers about a dozen Europeans; the Arab and Indian communities are, however, very numerous, with the result that the British community is by far the most important foreign community in Abyssinia.

The arrival of the Minister has been eagerly awaited, as usually in Abyssinia a Chargé d'Affaires, however efficient, carries much less weight with the Abyssinian Government than an efficient Minister.

Since the departure of Mr. Bentinck, there have been no developments with regard to Lake Tana. It is anticipated that developments may be expected in the next few months.

Dual Sovereignty.

Abyssinia is a country of rumours. Since the coronation of H.M. King Tafari, there have been repeated rumours of discontent in the interior. It will be remembered that H.M. Zauditu remains as Empress, or Queen of Kings, whilst His Majesty received simply the title of King. There is an old Abyssinian saying that two sovereigns cannot live in one place, and in consequence there has been an agitation in some quarters for His Majesty to leave the capital, and govern a specific portion of the country. As, however, it was also decided at the time of the coronation that the hands of His Majesty as Regent should be greatly strengthened—in fact, that the government of the country should in effect be in his hands, it is difficult to see how His Majesty could live in any place other than the capital.

The King and His Secretariat.

The result of this strengthening of the hands of the King have yet to be seen, as, as far as one can judge, the position is practically the same as before. It is still difficult to find any one person who can deal with any given matter. The King has, it is true, attempted to reorganise his Secretariat of Foreign Affairs, and now refuses to correspond direct on any matter, as was his former practice. This would at first sight appear to be a step in the right direction, indicating a devolution of authority, which becomes more and more necessary as the affairs of the country become more complicated. Unfortunately, however, the idea of responsibility is not yet understood in Abyssinia, and the practical result of the insistence on every matter passing through the hands of the Secretary of Foreign Affairs is that it is more difficult than ever to arrive at any result. It must be noted that the Secretary is not in the least free to take a decision on any matter, however important. Every decision must still be taken by the King, and by him alone (with reference in some cases to the Empress). The Foreign Secretary naturally finds it difficult to obtain the decision of the King on each and every subject submitted to him by the numerous Legations, with the result that he is forced to the expedient of evasive answers (when he replies at all) in order to gain time.

Then, too, it must be borne in mind that the same rule applies with the Secretariat. The function of the clerks is simply that of copyists or interpreters. No one of them dare deal with the most simple matter, without the express orders of the Foreign Secretary himself. Hence one can conceive that there is considerable delay before a matter comes to the notice of the Secretary of Foreign Affairs, much less to that of the King.

An Armenian Doctor.

Some sensation has been caused by the disclosures of Dr. Garabedian in the Geneva Press. Dr. Garabedian, an Armenian, for some years practised his profession in Abyssinia. In August, 1927, his house was raided by the local police, and Dr. Garabedian was kept under arrest, and finally forced out of the country. The reason, apparently, was an accusation that he was dealing in cocaine, but no legal proceedings of any sort were taken against him, and, as far as is known, no proofs were forthcoming in support of the accusation. Dr. Garabedian has now gone to Geneva, where it is understood that his case will be placed before the League of Nations by the Nansen Bureau for the protection of Armenians, whose protégé he is. In the meanwhile his case has been taken up with vigour by the Geneva Press, and very grave accusations have been made against the King. The outcome of this case is naturally awaited here with the greatest interest.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 29.

The Statutory Commission.

With the arrival of the Statutory Commission in New Delhi, and the examination of the Secretaries in the various departments of the Government of India as witnesses before the Commission, the daily reports have gained greatly in interest for the general public. The chief business of the Commission may then also be said to have begun; for, as Sir John Simon was careful to express, before the hearing of witnesses was begun at Poona six or seven weeks ago: "the first task thrown upon the Commission is the task of giving to the very best of their power a true description of the working of the constitutional machinery in India. Before we come to proposing a remedy, change, and a new Constitution," Sir John went on to say, "it is extremely necessary that we, the Commissioners, with the special help of my Indian colleagues and the witnesses, should be in a position to give a just, fair, sympathetic and honest account of the working of the Reforms."

The knowledge upon which any such fair and honest account must be based is obviously largely to be gathered from the witnesses at New Delhi, those Secretaries to the Government of India who are the last in a succession of men engaged in working the existing constitutional machinery. That Sir John has not fallen below the ideal held up at Poona is shown by a telegram of yesterday from the *Statesman's* Special Representative at New Delhi, part of which reads as follows: "The Conference is well managed and the atmosphere is easy and good. If sometimes one of the members of the Central Committee is tempted to assert his own political views, and refute some witness' statement, the Chairman gently reminds him that they are there to elicit the witness's opinion, not to convert him or argue the point."

The Central Legislature.

The first witnesses examined presented a picture of the working of the Central Legislature. A point brought out was that, since the inauguration of the Reforms, no elected member of the Legislature has been appointed to the Executive Council of the Governor-General, the practice observed in appointing new members of the Executive Councils in the Provinces being just the opposite. Additional point has been given to this by the appointment, a few days later, of Sir B. L. Mitter, the Advocate-General in Bengal, to the Law Membership of the Governor-General's Council, rendered vacant by the death of Mr. S. R. Das. The Government of India, if it is to be sure of a majority in the Assembly, has to secure the votes of at least fifteen elected members. It must either win over some Party, or some of the members of one or more Parties. It has generally had the support of the European and Muslim groups. Nevertheless it has won only 239 out of 431 divisions and lost 192. The voting, said the Home Secretary, Mr. H. G. Haig, has been on Party rather than Provincial lines, and, in his opinion, indirect election would lead to closer touch with the electors.

Law and Order.

The next day, the Home Secretary being again the witness, the control of Law and Order was the principal subject discussed. There were two courses that the Commission might be advised to recommend: (1) that Law and Order should be transferred to Ministers responsible to the Provincial Legislatures; (2) that Law and Order be centralized with the Government of India. The Home Secretary stated that, while the existing control of the Government of India over Law and Order was very effective, there was no possibility of the Central Government actually taking over the direction and administration of the police all over India, though that Government could

lay down definite standards of pay and efficiency. Even if Law and Order were transferred, the witness added, the Government of India, being the ultimate authority responsible for the intervention of the Army in support of the civil power, must have an effective voice in these matters.

Tariffs and Trade.

Sir Geoffrey Corbett, Secretary to the Government of India in the Department of Commerce, argued that his Department, its functions corresponding with those of the British Board of Trade, must continue to be Central, and not split up between the Provinces. The Fiscal Convention recommended by the Joint Parliamentary Committee, he said, had been carried out in both the letter and the spirit by the Secretary of State. There had been no instance of interference. Not once had the Secretary of State attempted to exert any authority against the Government of India's tariff proposals, when these were submitted to him. Generally he replied that he had no observations to make. Sometimes he had let fall a few observations, and on an occasion he might make a pungent criticism. If the Government of India was impressed by his observations, it would take note of them, but "we frequently don't accept them," concluded the witness. The Secretary of State acquiesces.

Education and the position of the Anglo-Indian community have also been examined at length; but enough space has been devoted to the proceedings of the Statutory Commission. Both those subjects have also been brought before us in the reports of the sittings of the Hartog Committee, which has now reached Calcutta.

Orissa Floods.

The Committee appointed by the Local Government last year to investigate the problem of the Orissa floods, after an inspection tour covering nearly 2,200 miles and an aerial survey of the coast, has come to the conclusion that the problem is not how to prevent floods, but how to pass them to the sea with as little loss of life and damage to property as possible. If this is to be done, the embankments that are the obstacles must be removed. The fact that the delta is inhabited prevents this policy from being pursued in its entirety. The most that can be done is to follow it steadfastly in so far as this is compatible with the maintenance of the population. To let things continue as at present is to pile up a debt, the Committee says, that will have to be paid one day in calamity and distress. Paid not once, either, but over and over again.

Women and Child Labour in Mines.

In a more than usually interesting leader in this morning's *Statesman* the rights and wrongs are considered of India's toleration of woman and child labour in her mines. "The mines are only a sideline for the Sonthals and the Kols, who are perfectly prepared to hand in their resignations the moment any pressure is brought to bear upon them, and to go back to their fields . . . Such being the attitude of the Indian collier, it follows that the conditions under which he works are dictated largely, if not entirely, by himself; and the arrangement by which his womenfolk and children accompany him underground has arisen simply because he himself insists upon it. He feels that they are safe with him, and, besides, he regards it as *infra dig.* that he should load the coal as well as cut it. Hence the women carry the coal; the men will not."

The December issue of the *British Empire Review* contains a special article by Sir Michael O'Dwyer on "The Simon Commission and Indian Self-Government." Special correspondents contribute articles on the trade and industry of India, Canada, Australia, New Zealand, South Africa, Southern Rhodesia, East Africa, British Guiana and Cyprus. The other contents include a full report of the Luncheon of the British Empire League, in connexion with the bicentenary of Captain Cook, at which tributes were paid to the great navigator and explorer by Mr. Amery, Vice-Admiral Sir Michael Hodges, on behalf of the Navy, and others.

LAND REVENUE ASSESSMENT IN INDIA.

The question of the adjustment of the demand of Government on agricultural land is receiving particular attention in those Provinces of India which have suffered most severely by the retention by the Government of India of the contributions obtained from industry through the Income Tax. Among the Provinces most hardly hit by this result of the Meston Settlement is Bombay, and we have been favoured with an enunciation of the Land Revenue system of that Province, prepared by Mr. D. R. Gadgil. The facts of the situation are very fairly set out in his pamphlet, though it is impossible to believe his conclusions could be accepted until the happy day arrives when the Bombay Government has more money than it knows how to spend.

It is an axiom that the State in India is the ultimate owner of all agricultural land, and the question arises eternally whether the payment which the State levies for the exclusive use of that land by an individual is a tax or is rent. It would not perhaps appear to matter much to the payer of the sum by which name it is called, but the inferences which may be drawn are important, at least to the politician. If the Land Revenue payment is a tax, then it should be graduated to the capacity of the payer; if it is a rent, then it should obviously be the amount which should be fairly obtainable from the land. Without going too deeply into this vexed question, we have no doubt that in a Rayatwadi country like Bombay, where the greater part of the land has been given out since the establishment of the British Administration, either owing to extension of cultivation, or to the falling in to Government of old occupancies, the Land Revenue assessment is, in fact, a rent. The British Administration succeeded to a period of great disorder, and, after a period of experiment, settled down to a system of Land Assessment, based on prices of produce, quality of soil, and facilities for marketing, which was certainly not burdensome to the cultivator. Inevitably it was not always equal in its incidence. Large profits were, for example, made in Guzerat, while the poverty of the soil caused distress in the Deccan. But the occasional hardships were due rather to the existence of uneconomic holdings (an evil constantly increased by the effect of Hindu customary law) and the inevitable reliance by the small cultivator on the moneylender, than to the Government assessment.

The revision of this assessment at intervals of thirty years was carried out without serious difficulty, since prices were rising and the demand for land remained keen. Nowadays, however, the Government finds almost insuperable difficulty in passing and enforcing any revision, however moderate, of the assessment. No one denies that the cultivator gets far higher prices for his produce, and particularly for his cotton, than he did thirty years ago. It would seem at first sight obvious that the Government should get a share of these higher prices. It is, however, pointed out, with perfect truth, that the cost to the cultivator, both of tilling his land and of buying the articles which he cannot produce, has also risen

greatly; and it seems to be generally agreed, both by the officials of the Government and by the anti-Government politicians, that it is impossible to arrive accurately at the net profits of cultivation. In these circumstances, the Government officials have been driven to rely on the evidence of rents received by private occupiers for the letting of their land, and the Settlement Commissioner, in particular, has adopted this line with perhaps excessive enthusiasm.

Doubtless in a country where rentals were general, such a basis would give sound results. It is, however, easy for opponents of Government to point out the weakness of the system in India. Where most of the land is cultivated by small holders, the percentage of rented land is comparatively small, and uneconomic or particular considerations often affect the sum fixed. At the same time the suggestions of politicians seem at least equally vulnerable. There is first the proposal for a permanent settlement of the Land Revenue at present rates. One would have thought that Bengal was a sufficient warning of the evils of such an arrangement. Not only is an enormous increment which ought to accrue to the taxpayers in general left to a small section of them, but the results to cultivation are disastrous, since the holding of so gilt-edged a security is eagerly absorbed by town-dwellers who give no personal attention to the land.

Characteristically enough, one of the Guzerat land-holders suggests that the basis of the Permanent Settlement should be the rates levied by Government in 1912, so that the fortunate holders of land should enjoy the whole increase of world prices that has occurred since then. This appears to be too much for Mr. Gadgil to swallow. He appears to prefer a system of personal taxation, increasingly approximated to the Income Tax, and subject to five-yearly revision. It seems obvious that this could only result in the small holder of an uneconomic holding retaining his land without payment of any Land Revenue whatsoever; and it could fairly be argued that no more should be taken from the solvent holder of exactly similar land. The loss to the Government would be enormous.

The politicians in general are especially anxious that no increase in Land Assessment should take place without the consent of a Statutory Committee of the Legislative Council. This Committee would necessarily consist of the members of the rural constituencies, and the results as regards assessment would be much the same as if the fixation of agricultural rents in England were left to a Committee of Farmers.

Land Revenue is no longer the only resource of the Provincial Governments, but it is still their sheet anchor, and its weakening may bring them perilously near the rocks of financial insolvency.

The Secretary of State for India has appointed Mr. M. J. Clauson to be his Assistant Private Secretary in succession to Mr. J. P. Gibson, who has been appointed by the Permanent Under-Secretary of State for India to be his Private Secretary, *vice* Mr. R. E. Field (promoted).

THE INDIAN STATES AND THE REFORMED CONSTITUTION.

Sir Leslie Scott gave an address on "Indian Constitutional Reforms" before the Junior Constitutional Club on December 12. Sir Mortague Barlow, Chairman of the Political Council of the club, presided over a large and representative gathering.

After a few introductory remarks by the Chairman, Sir Leslie Scott prefaced his address by the remark that, having finished his task of putting the case of the Indian Princes before the Butler Committee, he was now free to speak without any of the limitations that might have attached to his position as an advocate.

In the course of a brief historical survey of the Nationalist movement, the speaker observed that the movement was first promoted by able Indians who resented their exclusion from place and power. Only very gradually did it concern itself with politics, but by degrees the successors of the pioneers began to talk of themselves as representatives of the people, which they were not. The demand for democratic institutions was largely artificial in character, he contended, and greatly stimulated by the Wilsonian cry of self-determination. In any case, in trying to find a panacea for these and other post-War troubles in British India—two-thirds of the whole—everyone forgot the Indian States, the remaining one-third.

The Indian Princes, he continued, had treaty rights with the British Crown, and had been guaranteed their independence by Queen Victoria and in various pronouncements. But in all the developments in British India, the Indian Princes had risked serious diminution of position, and even economic loss. Take the tariff which the Swarajists had recently been allowed to impose on imported cotton and steel goods coming into India. As these goods were largely not capable of production in India, the tax fell mainly on the Indian consumers by a rise in price—the third in the native States, as well as the two-thirds in British India. Yet the Indian Princes had no share in imposing the tariff or settling the rates; and still worse, the native States did not receive one penny of the proceeds of the high tariff now being imposed. The interests of the native States were largely identical with those of the British manufacturer and importer.

The British Crown and Government were bound to the Indian Princes by a series of treaty contracts, perpetual in character, which could not be repudiated by either side. The essence of the contract was that, in return for her paramountcy, Britain had bound herself to protect the native States, and that entailed a perpetual obligation to retain in India a force sufficient to carry out that obligation. The protection of the native States, like the protection of the 50,000,000 of untouchables, was a trust which Great Britain could not relinquish, even if she would.

The Indian Princes were loyal, but their contractual bargain was with Britain and the British Crown: they would never submit to being ruled by so-called democratic assemblies set up at Delhi. If the British Army were withdrawn, the *intelligentsia* of British India would be at once subdued by the fighting forces of the native States.

The Indian Princes had no desire to be obstructive; they were willing to come into any proper development on federal lines; but that would involve some impartial tribunal to see that justice was done as between the native States and British India; and also a material strengthening of the power of the British Central Government at Delhi, on the lines of the valuable report of the European Associations recently submitted to the Simon Commission.

In conclusion, Sir Leslie Scott made the interesting announcement that the report of the Indian States Committee would probably be presented in the spring, and when made public would give the British electorate full insight into the whole position.

INDIAN NOTES.

(Continued from page 731.)

present included. The principal officers of the new department will be appointed by the Governor-General in consultation with the President, while other members of the establishment will be appointed by the President upon the recommendation of the Secretary. The selection of the remainder of the staff was the subject of considerable discussion in the course of the Assembly debate, the consensus of opinion favouring the delegation of the duty to the Public Service Commission, an independent body already doing similar work for various departments of Government. It is now been decided, we understand, that the actual appointments shall be made by the President from nominations put forward by the Commission, and that the members of the staff shall be under the President for disciplinary purposes, with, of course, a right of appeal to the Governor-General. In other respects the scheme as sanctioned by Lord Peel is, we believe, practically identical with that adopted by the Assembly in September.

OBITUARY.

THE RAJA OF PANAGAL.

Following the appointment of Sir Venkatta Reddi to succeed Mr. Srinavasa Sastri as the Agent-General of the Government of India in South Africa the Non-Brahmin or Justice Party in Madras has suffered another still more severe loss by the death of the Raja of Panagal, Sir Panaganti Ramarayanangar. After taking an active and influential part in the formation and organization of the movement, of which he afterwards became the leader, he was one of the first three Ministers to be appointed under the Government of India Act of 1919. Retaining office at the second election at the close of 1923, the Raja held the portfolio of Local Self-Government in the Madras Government (Transferred Departments) throughout the whole six years of the non-Brahmin supremacy in the local Council. On leaving office in 1926, following the rise of the Swarajist Party, the Raja was created K.C.I.E., having previously received the hereditary title of Raja four years before.

POPLAR HOSPITAL.

There was a distinct link with India provided for the Seventy-third Annual Festival of the Poplar Hospital for Accidents, which was held at the Savoy Hotel on December 12. The Hospital meets the needs of a population connected with shipping and the great London Docks, and for this reason it can count on ready sympathy from the Port of London Authority. Sir Montagu Cornish Turner, Chairman of the Chartered Bank of India, was in the Chair, and among those present were Lord Ritchie of Dundee, Sir Charles and Lady McLeod, Sir Stanley and Lady Bois, Admiral Sir Frederick Latham, Captain Sir Arthur Wellesley Clarke, Captain Sir Hamilton and Lady Benn, Sir Edward Boyle, the Rt. Hon. Thomas Wiles, K.C., Mr. and Mrs. C. S. S. Guthrie, and Brigadier James Whitehead.

In proposing the toast of "Success to the Poplar Hospital," the Chairman referred to the unavoidable absence of Lady Turner, which was regretted the more on account of her lifelong interest in hospital work, and Sir Montagu recalled the fact that her association with the European General Hospital in Calcutta had won for Lady Turner the title of "the Angel of the Ward." The importance of the Poplar Hospital for the shipping world was emphasised by several speakers, and it is well that Britons overseas should be reminded of its claims on their support.

Mr. J. Douglas Young, who was recently appointed a Judge of the High Court of India at Allahabad, was entertained by a large number of his professional friends at a complimentary dinner at the Trocadero Restaurant on December 10. The company included Sir George and Lady Fowler, Sir Malcolm Macnaghten, Major-General Sir Sydney Crookshank, Mr. H. G. Comber, and Sir Cecil and Lady Walsh.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ON DHUFAR.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Referring to the report appearing in your issue of December 13 of the Paper read by Mr. Bertram Thomas before the Royal Geographical Society on December 3, I note from the concluding sentence that some observations of mine with reference to Ophir have been completely misunderstood or mis-reported. I shall be grateful, therefore, if you will give me space to make a correction.

I am very far from thinking that the theory that the site of Ophir is to be sought for in the vicinity of Dhufar is an absurd one; on the contrary, circumstantial evidence seems to lead a good deal in that direction. My remarks, however, related to the etymology of the words Ophir and Dhufar, and not to the site of the former. Mr. Thomas made the interesting suggestion that Dhufar might very likely be a contraction of the words *Dhu-Afar*, which would give the meaning "endowed with redness," *Dhu* being a common Arabic prefix signifying "endowed with" or "possessed of," and *Afar* meaning "red" in the local vocabulary, and relating to the markedly reddish hue which pervades the landscape on that part of the coast when viewed from a distance. I remarked that this diagnosis of the word seemed to be a very plausible one, in contradistinction to another suggestion put forward by a lecturer at the Central Asian Society last year (May 11, 1927),* who held that Dhufar was really *Ed-Ophir*, the *Ed* being a local form of the Arabic definite article *El*. It was this suggested derivation that I impugned, holding that it would not bear examination from the etymological point of view. As to the probable site of Ophir, Mr. Thomas admittedly had not addressed himself seriously to the study of that problem, and apart from what has been said above regarding his interpretation of the word *Dhufar*, I still hold the view that I expressed last year—namely, that "the subject wants more study before we can accept that we are any further advanced towards the proof of the identity of Ophir with Dhufar."—I am, etc.,

P. Z. Cox.

[We much regret the slip made in the report of Mr. Thomas's lecture to which Sir Percy Cox refers. His remarks, it so happens, were not misunderstood at the time, but the report does not clearly represent the fact that Sir Percy Cox was challenging the identification of the two words, Dhufar and Ophir. Readers of THE NEAR EAST AND INDIA who are interested in this fascinating derivation may be referred to Sir Percy's own remarks upon Commander Craufurd's lecture, published in our issue of May 19, 1927; and to the account of Mr. Thomas's Oxford lecture, published in our issue of November 1, in which the suggested derivation of the word Dhufar (concerning which we regret that we are unable to print the Arabic characters used by Mr. Thomas and by Sir Percy in his letter) is more fully investigated. As for the site of Ophir, that is a subject which, as Sir Percy says, Mr. Thomas did not discuss at the Royal Geographical Society lecture. Nor did Sir Percy then discuss it; and our representative naturally did not intend to imply that the subject had been raised.—ED.]

* See *Journal of Central Asian Society*, Vol. XIV., page 234.

A NEW IRAQ CUSTOMS HOUSE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of October 4 (in your Baghdad Correspondent's letter) mention was made of the proposed new Customs House at Basrah. It was further stated that the Baghdad merchants were strongly opposed to the Basrah site for financial reasons (i.e., loss of interest on the time taken up in transit of duty-paid merchandise from Basrah to Baghdad, which loss, it was pointed out, would amount to a very considerable sum per annum).

As your journal circulates in both Basrah and Baghdad, may I submit through your columns an additional reason why the new Customs House should be located at Baghdad, which is, that the terminus of the proposed Trans-Asiatic Railway (Haifa-Baghdad) will be at Baghdad, and that it is obvious that all merchandise imported from Europe for Iraq and Persia via the Trans-Asiatic Railway will require to be dealt with for customs duties at Baghdad and not at Basrah?

It would, therefore, seem that the building of a new Customs House at Baghdad is in any case imperative, apart from any question of what may (or may not) be done at Basrah.

Engineers' plans for the Baghdad terminal of the Trans-Asiatic Railway have been in the possession of the Iraq Government since the autumn of 1927, and it is submitted that these plans suggest that the most convenient site for the Baghdad new Customs House—in order to serve the treble purpose of the requirements of imports from (1) the Persian Gulf and (2) from the Mediterranean (via Haifa) and (3) from Persia (via Khaniqin)—is on the right (western) bank of the Tigris between the north side of the Maude Bridge and the southern end of the British Residency.

The Trans-Asiatic Railway terminus on the Tigris is planned for the adjacent site immediately north of the above in the Shawakah quarter of the city.

The Customs House site suggested would have an available river frontage on the Tigris of about 270 yards, thus allowing for ample wharfage for river craft from Basrah, and it would be within 280 yards from and south of the site of the proposed Trans-Asiatic Railway terminus. The distance from the proposed Trans-Asiatic Railway goods terminus and sidings and the proposed new Mediterranean Railway wharf on the Tigris (south of the Maude Bridge) would be about 360 yards, and from the existing railway wharf of the Iraq Railways on the Tigris about 280 yards.

The available depth of the suggested site for the new Customs House (after clearance of existing buildings) would be 140 yards at the north end and 80 yards at the south end. This would allow for ample quay space.

Reference is made in your issue quoted above to a proposed permanent bridge over the Tigris at Baghdad. It may, therefore, be of interest to state that the engineers' plans of the proposed Baghdad terminal of the Trans-Asiatic Railway show a proposed new 30-foot wide road bridge over the Tigris at a point 670 yards north of the existing Maude Bridge.

The alignment of the proposed new bridge is identical with that of the 45-foot wide straight street leading south-westwards from Exchange Square in the eastern half of the city (Takiyah quarter) to the river, the western abutment of the bridge and a new continuation roadway being immediately along the north side of the proposed new Trans-Asiatic Railway passenger terminus and thence leading westwards through the Alawi al Hillah quarter to the Masudi and Fallujah roads.

If this site is adopted for the proposed new bridge there will be direct access to the centre of Baghdad (Exchange Square) from the new railway terminus, thus avoiding the long détours otherwise necessary via the existing North Bridge or the Maude Bridge.—I am, etc.,

JOHN M. NEWTON.

Manchester, November 26.

Book Reviews

A FIELD WORKER'S LABOURS.

"BURIED TREASURES OF CHINESE TURKESTAN." By Dr. Albert von Le Coq. Illustrated (London: George Allen & Unwin Ltd. 18s. net)

This is an account of the travels of the author and his companions in very remote parts of Chinese Turkestan in search of artistic, literary and historical remains of the old days when the country was very different and when the inhabitants had a far higher degree of civilization than at present prevails. The title of the original book, which appeared two years ago, may be translated literally as "On the Tracks of Hellas in Eastern Turkestan," which gives a clearer idea of what his object was. His researches showed clearly, as his illustrations prove, that the influence of Hellenistic art in these regions was most marked and lasting.

Yet the book says but little on these subjects. The ordinary reader, perhaps, will feel that he does not miss very much from the absence of detailed information about works of art which, as regards works in the flat, were due largely to stencils and, in the round, largely to moulds. What we do miss is some account of the numerous Manichaean religious books which he found. These opened out new territory to students of religion and have been exhaustively studied elsewhere. But a chapter on the subject would have been very welcome here.

What the author sets out to do is to give us some idea of the terrible difficulties in the way of the field worker in these parts. And here his extreme modesty gets into the reader's light. Indeed, it is only by reading between the lines, as it were, that it is possible to realise what endurance and perseverance are required and how much depends on the physical powers and mental stamina of the explorer. He is far more concerned to sketch the people among whom he worked, doing so with an affectionate and humorous insight which is infinitely to his credit. When he comes to his almost superhuman performance in getting Captain Sherer, of the Indian Army, over the wintry passes into safety when the latter was in a condition of utter collapse, we feel ourselves to be reading the words of a gentleman whose modesty is equal to his gallantry.

His travels took place in 1904-1906, but there is nothing to make them seem out of date. His illustrations are numerous, excellent and enlightening. It is a pity that the index is not better, and the want of a map is sadly felt when travels in such completely unknown lands are

attempted to be followed. The reader's exasperation at this defect is not lightened by finding reference by the Publisher to the "clear maps" which help to complete the book. The book is well translated and becomingly produced. C. S-W.

A RED CROSS PILGRIM.

"ABOUT IT AND ABOUT." By L. F. Gielgud (Edinburgh: William Blackwood & Sons, Ltd. 12s. 6d. net).

Mr. Gielgud, a member of the Secretariat of the Central Red Cross organization travelled, *via* America, to Japan with the American President of that organisation to a Oriental Red Cross Conference in Japan, returning with him by way of China, Philippines, Siam, India, Egypt and the Near East. In the various countries visited, they discussed Red Cross matters with the various national societies. The author claims that this contact with the inhabitants of the countries hurriedly visited gave him an insight into things which escape the ordinary globe-trotter. We regret that we find little in the book to justify the claim. What we do find is a good deal of acute, if perfunctory, observation and a great deal of generalisation based necessarily on little knowledge. About India the author is merely peevish and depressed. He finds that the Taj Mahal has "sex appeal" just as Mary Pickford and Nazimova have, but nothing more. In Egypt he remarks that the pyramids "are as silly today as on the day they were built." Of Bulgaria he tells us nothing except that the Chairman was suddenly taken ill and that the King allowed him to use his bedroom to recover in. The best part of the book is the section on Japan, where he had some time to look round. C. S-W.

"MASSIS."

The second number of *Massis*, the new monthly paper devoted to Armenian interests, has reached us. Its principal articles are devoted to "Great Britain and Armenia," and "Armenian Economics and 'Tufa' Stone." The first article seeks to show that for a whole century there has been an attitude in British official quarters of hostility to Armenia: Lord Aberdeen in 1828, Lord Salisbury in 1875, and British representatives at the League of Nations this year are quoted in support of this indictment. In the second article mention is made of the remarkable discovery of the *tufa* stone of Artig, a village near Leninakan. This *tufa*, which is to be used as building material, will, it is hoped by scientists, become to Armenia what the Baku oilfields are to Azerbaijan and the manganese mines are to Georgia.

Other things to be particularly noted in this number are "Armenian Geographical Names in Hittite Records" and the editorial "Notes," which display enthusiasm for the establishment of an Armenian "Homeland" under Russian protection and corresponding lack of enthusiasm for the scheme advocated by the French in Syria.

Mr. Vasila Nahariak, a native of Czernowitz (Roumania), who is 100 years of age and has spent the last 20 years in Limerick, Saskatchewan, where he has become a naturalised British subject, having saved enough money to go home, sailed on December 10 from Halifax to spend Christmas with his kinsfolk in Roumania.

Major John Henry Kennedy, of Attleborough Lodge, Norfolk, died suddenly in London on December 10 at the age of 69. He took part in the Gordon Relief Expedition as one of Lord Wolseley's special service officers, being employed as boat officer at Korti. Afterwards he took over the management of the Second Cataract and all the river south of it as transport officer under General Sir William Butler. He received the Egyptian Medal with clasp, and the Khedive's Star.

JEWISH STUDENTS FROM PALESTINE.

An admirable conception of the enthusiasm which animates the young Jewish community of Palestine was obtainable on December 13 at an informal party given by the National Union of Students (3, Endsleigh Street, W.C.1) to some of the Palestinian students now studying in England. Songs were sung in English (translations of Schubert) by Miss Walmsley, in Hebrew (Palestinian folk-songs) by Miss Katinsky, of Tel Aviv, who is now studying in London, and by a mixed group of young Jews and Jewesses (Palestinian songs). Some of these folk-songs—which, by the way, are still in the making in Palestine—were most attractive. Not uninfluenced by the Slav idiom—the Russian Jew preponderating in Palestine—they yet possessed a definite Hebrew individuality. The evening, which was organised by Miss Nancy Parkinson, Hospitality Secretary of the National Union, provided manifest enjoyment for both the hostesses and the guests. Among those who accepted invitations to meet the students were Dr. and Mrs. M. Eder, Mrs. Hertz (wife of the Chief Rabbi of the British Empire), Miss Reynard (Warden of King's College for Women), Miss Sylvester Samuel, and Mr. Humphrey Bowman (Director of Education in Palestine).

THE LONDON MUSLIM LEAGUE.

The Times states that, following the death of Mr. Ameer Ali, and with the assent of the President, the Aga Khan, the London Muslim League has been dissolved. The remaining assets, after due audit, have been paid to Barclays Bank, Ltd., as trustees of the Indigent Muslim's Burial Fund. The organisation was formed as a branch of the newly created All-India Muslim League in 1908 under the chairmanship of Mr. Ameer Ali, and with the support of a virtually unanimous community. It played an important part in pressing for the decision under which in 1909 Lord Morley's plan of joint electoral colleges of Hindus and Muhammadans was dropped and a scheme of separate Muhammadan electorates was introduced in the Morley-Minto reforms. Over a long series of years the London League made representations to the authorities on subjects both of special Muslim and of general Indian interest, the latter including claims for the admission of Indians to the higher commissioned ranks of the Army (conceded in 1917), and for Indians in other parts of the Empire to be freed from disabilities and to have the due rights of citizenship. The dominating influence was that of Mr. Ameer Ali, and it is felt that, following his death, there is no occasion for the continuance of the organisation.

CRETE.

Captain E. N. Bennett lectured to the members of the Near and Middle East Association on December 13 on "The Island of Crete: Its Past and Present." Lady Newnes presided, and the discussion was led by Mr. John Penoyre. The following were among those present: The Egyptian Chargé d'Affaires, Count and Countess Los, Herr Karl Zeileissen, Major and Madame vitez Beldy, Mahmoud Bey, Viscountess Dupplin, Lord Hedley, Sir William Clark, Lady Tighe, the Hon. Lady White Thomson, Baroness de Goldsmidt, Major F. A. Hamer, Sir Thomas Arnold, Mrs. Halford Hewitt, Miss Ella Sykes, Mrs. E. N. Bennett, Lady Sprigge, Professor Norton, Mrs. Geoffrey Mander, and the Rev. Chancellor Ponsonby. The lecture was held at 133, Queen's Gate, by kind permission of Miss Spalding and Madame Griboval, who held a reception afterwards.

The Polish Diet has ratified the Treaties of Friendship and of Commerce with Persia.

Signor Grandi, Italian Under-Secretary for Foreign Affairs, arrived in Constantinople on December 16.

On December 15 Belgrade experienced a mild earthquake. The epicentre was Mladenoyatz, about eighty miles away.

The Albanian Cabinet has authorised the Finance Minister to prepare a Bill for the appointment of a National Committee to study economic problems.

The death has occurred, at the age of 75, of Mr. Demetrius Boulger, who showed a constant interest in things Asiatic and African. In conjunction with Sir Lepel Griffin, he founded the *Asiatic Quarterly Review* (which is now the *Asiatic Review*, edited by Mr. Richter). He published many articles and books, including lives of men such as Gordon and Stamford Raffles.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
 Further particulars may be obtained of
 E. H. Keeling,

 Hon. Sec.

NEWS IN BRIEF.

The first session of the new Albanian Parliament was opened at Tirana on December 10.

A proposal has been made for the creation in Albania of a women's society to work for the emancipation of Albanian women.

The Turkish Minister of Finance is drafting a Bill for the creation of free zones in which foreign firms may erect motor-car factories.

The Viceroy of India and Lady Irwin left Rangoon for Calcutta on December 11 after spending 23 days in Burma.

Nine members of a party of cinematographers who were making a film of the North Caucasian mountains, near Grosny, fell down a precipice and were killed.

The Rev. P. Graydon Tibbs, formerly a Government chaplain in the diocese of Bombay and a canon of Bombay Cathedral, has accepted the living of Hargrave, Northants.

The Turkish Government is selling the treasures of the ex-Sultan, and it is reported that those jewels which are not of historic value have been acquired by English purchasers.

A Mechanical Transport Company is to be formed for service with the British troops in Egypt, to be designated the 39th Company (Mobile Repair Unit), Royal Army Service Corps.

A by-law has been published forbidding, from Christmas onwards, the making of any noise by the use of mechanical or electric horns or klaxons within the municipal bounds of Jerusalem.

Won by Lieut. William Alexander Kerr, of the 24th Bombay Native Infantry, for "gallantry in capturing a stronghold near Kalapore" in 1857, a Victoria Cross was sold in a London auction room for £39.

In the Coptic Cathedral in Cairo, on December 16, Mgr. Ambu Yoannes was consecrated as Coptic Patriarch. He has taken the name of Yoannes XIX.

Eleven men were injured at Corinth on December 12 when a crowd demonstrating in favour of the immediate distribution of the funds collected for the relief of sufferers from the recent earthquake came into collision with the police.

The collier River Clyde, now named the Angela and sailing under the Spanish flag, which played an important part in landing troops at Gallipoli, put into Dover harbour on December 13 with condenser trouble. She was on a voyage from Sunderland to Italy.

At a meeting of the Council of the East India Association on December 10 the new members elected included Earl Winterton, M.P., Sir Malcolm Seton, Sir Edward Maclagan, Sir Verney Lovett, Sir Walter Willson, Sir Clement Hindley, Mr. A. Yusuf Ali, and Mr. J. E. Woolacott.

Sir Frank Clement Offley Beaman, of the Byculla Club, Bombay, and Palace Gardens Terrace, Kensington, W., formerly a Judge of the High Court, Bombay, and a writer on philosophical subjects, who died on August 12, aged 71, son of the late Surgeon-General Arden Hulme Beaman, left unsettled estate in this country of the gross value of £14,083, with net personality £13,969.

The Greek Chamber on December 12 passed a law creating a Senate. The body is to be composed of 92 members elected directly by the people, 18 by professional bodies, 10 by the Chamber and Senate. A proposal assigning two seats to the clergy was withdrawn. Greece has had no Senate since 1862. Thracian Muslims and Salonika Jews form separate constituencies.

It is reported from Cairo that excavations carried out by the Egypt Exploration Society at Armant (the ancient Hermonthis), on the left bank of the River Nile, 12 miles south of Luxor, have resulted in a notable discovery. The excavations, which were begun in the 1926-27 season by Mr. Robert Mond and Mr. W. B. Emery, were resumed on November 15. A subterranean chamber has now been laid bare. It contains a large granite sarcophagus, which is probably that of a bull.

School of Oriental Studies, London Institution

 December 7, 1928 (Old Style).
 Rajab 7, 1347 A.H. of the Muslim Calendar.
 Tebet 7, 5689, of the Jewish Calendar.

Mr. George Terrell left London on December 13 for Calcutta, joining the Rajputana at Marseilles.

Lieut.-General Sir Aylmer and Lady Hunter-Weston will leave London to-morrow (Friday) for Egypt.

The King of Italy has conferred the Collar of the Order of the Annunziata on the King of the Albanians.

Mr. Hart, the new United States Minister to Albania, presented his credentials to King Zogu on December 13.

Bishop Gwynne, Bishop of Egypt and the Sudan, has returned to Cairo from a visit to India and Australia.

The Gaekwar of Baroda arrived last week at the Hotel Hermitage, Nice.

Mr. Ardeshir, Secretary of the Persian Legation in London, left with Mrs. Ardeshir this week for Teheran.

The Hon. Mrs. Adeane has left London for Egypt, and will be away until January.

The Earl and Countess of Selborne will shortly leave 14, Buckingham Palace Gardens for Egypt.

Mr. Betram Thomas, O.B.E., Grand Wazir to the Sultan of Muscat and Oman, left London this week to resume his post at Muscat.

Lt.-Col. Sir Lionel B. H. Haworth, K.B.E., late Political Resident in the Persian Gulf, arrived in England last week.

Viscount and Viscountess Inchcape left London on December 13 *en route* for Egypt, where they will remain for a few weeks.

The Maharaja of Baroda, the Aga Khan, and the Jam Sahib of Nawagar left Marseilles on December 14 in the P. and O. liner Rajputana for Bombay.

Dr. Eden, formerly Bishop of Wakefield, is acting as Chaplain of the Anglican Church at Assouan for the winter season.

Mr. and Mrs. Geoffrey Dawson have left England for a visit to India and Ceylon, and expect to be absent till the end of March.

General Gouraud, Military Governor of Paris, sailed on December 14 for India, where he is to be the guest of the British Government.

The German Minister to Albania, Herr Kardorff, has presented his Letters of Credence to King Zogu of Albania.

Mr. Dennis Herbert, M.P., has left for India, and expects to be back at the end of January. Mrs. Herbert has gone with him, but will not return till February.

To celebrate the birthday of King Alexander of the Serbs, Croats, and Slovenes, a service was held at the Russian Church of St. Philip, Buckingham Palace Road, on December 17.

Mr. Amin Rihani, author of "King Ibn Saoud, His Land and His People," who has been staying for some time in London, left on December 15 for America, taking with him the horses given to him, when in Najd, by King Ibn Saoud.

Lady Beatrice Ormsby-Gore arrived at 5, Mansfield Street from India on December 15.

Manubhai Mehta, who came to London to take part in the conferences of Princes and Ministers, and Lady Mehta embarked in the Rajputana at Marseilles on December 14 on their return to India.

General the Right Hon. Sir John Maxwell and Lady Maxwell, who had arranged to go to India this month, have altered their plans. They will sail on December 28 for South Africa, where they will be the guests of Sir Abe Bailey at Rustenen-Vrede, Muizenberg. After a brief visit to Rhodesia they hope to proceed to Egypt by the east coast route.

A memorial service was held on December 12 at St. Mark's, North Audley Street, for Miss Mary Adelaide Broadhurst, President of the National League. The Rev. W. G. Pennyman officiated. Among those present and those who sent messages of sympathy were the Estonian Minister and Mme. Kallas, the Countess of Shaftesbury, the Earl of Denbigh, Viscount and Viscountess Templeton, Lord Montagu of Beaulieu, Lord Islington, General Sir Reginald Wingate, Lord Waring, Lord Danesfort, Lord Lamington, Lord Headley, Mrs. Sanford Bissell, Sir Gilbert Parker, Bt., Sir Bertie Frere, Sir Douglas Newton, Sir Patrick Ford, Mr. J. S. Wardlaw Milne, M.P., Colonel Lewis Butler, Colonel Howard Bury, M.P., Sir Logie and Lady Elphinstone, Mr. J. D. Cree, Mr. F. J. Nettleford, Sir Clifford Cory, Mr. Arthur Palliser, Lady Stephenson Kent, Lady Firth, Lady Ryall, the Hon. Violent and the Hon. Hilda Douglas-Pennant, the Hon. Mrs. Adolphus Graves, Captain Richard Ford, Mr. A. Rihani, Mme. Yovanovitch, Mrs. Alec Tweedie, Mrs. Campbell Ogilvie, Mrs. Eckstein, Colonel and Mrs. St. John Cooke, Mr. and Mrs. Bruce Dick, Mr. Kenneth Williams, Shaikh Dojaily, and Mr. Sa'ib Salam.

THE WEEK AT HOME

London, Tuesday Morning.

The Season.

The shadow of the King's health still hangs over us, but the spirit of the Christmas season is manifest, all the same. Naturally many Christmas functions depend upon the speed of the recovery of the Sovereign, but there is, apart from them, sufficient of jollity and brightness to remind the young, at any rate, that Christmas is almost here.

In the shops an even gayer show than ever seems to be made this year, and he who cannot in the West End think of presents is a dull bird, indeed. Of course, there are other reasons that lack of ideas for the non-buying of presents: money is still fairly tight.

A Forecast of the Election.

Various minds, eminent and otherwise, are now occupying themselves with forecasts of the result of the General Election next year. Of these, incomparably the most interesting, in the immediate sense, is that of Lord Rothermere, who is so independent of Conservative party attachments as to face the prospect of a Socialist Government with equanimity. And, of course, he is none the worse for that.

It is instructive, however, to see on what he bases his conviction that, *ceteris paribus*, the Conservatives cannot possibly come back with a majority. First, he says that the "Flapper Vote" is electoral suicide—and presumably the *Daily Mail*, which numbers among its readers so many of the readily impressionable sex, ought to know. He states that the De-rating Bill is unfair to small rate-payers and taxpayers, and again he ought to know something of the way in which this numerous section of the community thinks. And lastly he affirms that under the weight of the Budget the industrial foundations of the country will sink. He also brings in foreign politics, but that is a subject hardly likely to be uppermost in the mind of the average voter next year.

Lord Rothermere is plausible, but is he sound? Certainly he will find many to follow him in voting for or against an Administration not because it wears this or that party label, but on account of what it has actually done or failed to do. His thesis is reinforced, moreover,

by a considerable section of the thinking community which is profoundly dissatisfied with the foreign policy of the Conservative Government. But I still doubt whether these two strains, domestic and foreign, of opposition to the present Government will combine to make a greater stream than that up which the Conservatives claim to be sailing.

Helping the Miners.

The distress of the families of unemployed miners is almost intolerable, although it is but recently that the nation as a whole has become possessed of some notion of that distress. When it learned of the miners' plight, however, it not only responded in the form of public benevolence (e.g., some towns "adopted" certain mining districts, as they "adopted" French villages stricken by the War), but also morally forced the Government to supplement the largest benevolent Fund, that is, the Lord Mayor's Fund, with gifts from the Treasury.

It is a timely action that, at the season of Christmas, Government should have come to the aid of the starving and helpless miners. Of course it is no solution: the problem still remains. But there is something in the British character (or, rather, it is common to humanity) which, whatever theoretical reasons may exist urging the contrary, insists on common charity being extended to those who through no present fault of their own are threatened with the blackest Christmastide of their lives.

Trade with Russia.

It looks as if in one important particular the Government may attempt to cut the ground from under the Opposition's feet. For no less a personage than the Parliamentary Secretary to the Chancellor of the Exchequer, Mr. R. G. Boothby, has raised the question of the desirability of trade relations with Russia. Certain Ministers are said to be strongly in favour of such a move, and although it seems difficult to credit Mr. Winston Churchill, of all people, with a wish for a *rapprochement* with the Bolsheviks, the fact that it was his Parliamentary Secretary who brought up the question would seem to indicate that he, too, has been converted to the more reasonable view.

Commercial opposition to the Soviets has never, I think, been a very strong card in this country, and if the Government could find ways and means to resume trade with Russia, it would probably gain many votes which, unless something is done, will certainly be cast against it.

If the Conservatives save up all their little surprises, including a reduction of Income Tax, to the months immediately preceding the Election, their prospects may not be quite so dismal as our Lord Rothermeres make out.

Max Beerbohm's "Ghosts."

Max Beerbohm is here in London again, this time caricaturing the famous men who strolled the stage before we were young men. He calls the exhibition at the Leicester Galleries of his drawings "Ghosts": a most happy title, for even those of his "victims" (an absurd *cliché*), who are still living will be reminded of this version of their youth with, so to speak, a jerk.

You must chortle or sniff or expound in the presence of these portrayals. It is difficult, for one who has not seen all the originals in the flesh, to choose, but drawings like those of Mr. Joseph Chamberlain, Mr. Walter Pater, Mr. Bancroft and Mr. George Bancroft, Wilson Barrett, Mr. Henry James, Rothschilds at Play, and so on, most extract a guffaw of appreciation or the inner smile of contentment which is the more complete for not being so externally expressed.

It is really a wonderful show, because (mainly) there is nobody like "Max." Although nobody is very much flattered by him, nobody could get very angry with him. "Max" still stirs the child within us, although he is not quite irresponsible.

"THE GENTLE ART OF SUASION."

By E. DAVID GOITEIN.

In Palestine advertising is still in the embryonic stage. As you walk up the Mount of Olives no hoarding calls to you "If you must get stout—get Aaron's," and no notice assures you that Carmel soap will "keep that school-girl complexion." Yet dotted up and down the country are to be found go-ahead salesmen who advertise their wares in crude but cryptic fashion.

An Arab pastrycook whose "shop" is a stone's throw from the Jaffa Gate, advertises in Arabic and English. The English notice reads—and the spelling is not mine—"Eat us here. Our cakez best in the Jerusalem." And underneath is a crescent with the words "You wil not die." But the Arab's favourite method of advertisement is to hang over his wares a large photograph of himself in European costume, with a tarbush on his head. Below the photograph, usually in Arabic, sometimes in French, sometimes in English, run such words as these: "I, Djamal Yussuf Sheikh, am the owner of this shop. Buy your things here, I am honest." But of all the Arab advertisements in Jerusalem the one that delighted me most was a quatrain—almost untranslatable—but which in English might sound something like this:

I, Abdul, sell meat, which is good to be eaten,
I am good—so's my meat—and it cannot be beaten!
Therefore come and buy, and eat just a plateful.
May Allah be praised, I am one of the Faithful.

I may say that his booth was rather a dirty affair, his meat was covered with flies, and he himself did not present the appearance of being the personification of purity! As, however, almost all his customers were illiterate and could not read a word, the apparent incongruities between the advertisement and fact did not matter so very much.

The Jews in Jerusalem are not behind—nor much in advance of—their Arab brothers so far as the gentle art of advertising is concerned. A remarkable fact to be chronicled is this, that the largest synagogue in the old City finds it necessary to advertise its wares. During the season one can read in the advertisement columns of the *Doar Hayom*: "Tourists! You must visit the Hurba Synagogue. Special services for visitors. The High Commissioner will be among the Worshippers next Saturday."

I have never been able to decide whether it was not some English wag who wrote the advertisement for a silk merchant, which reads in English: "Come inside. We will do you." It is difficult to believe that this is unconscious humour. His next-door neighbour, however, has certainly paid some English scholar to concoct the following advertisement. . . . Picture to yourself a green board. On the right of it there is a crude painting of a man holding up a pair of trousers. Next to it is written: "Have you a trouser? We has a million." Below is the picture of a cap. Next to this the words: "Why do you walk in the sun, then you have no cap? I has all the caps in Palestine." At the bottom is a drawing of something that looks like a Dutch cheese. The inscription is very graphic. "You must not clothe with anything. I sell everything clothes." It is fairly clear that Waldstein's Hebrew-English dictionary was extensively used in putting together this travesty of the English language.

All the instances I have so far given are taken from Jerusalem. But Tel-Aviv, the suburb of Jaffa, is famous for one particular advertisement which all English-speaking visitors are shown. It is a brass plate of a nurse who has been granted a diploma. But she has expressed this fact a little incorrectly. For the words on the plate read: "Mrs. —, Diplomatic Midwife." But "Diplomatic" is not precisely the adjectival form of "diploma."

Mr. Golding alleges that a certain doctor advertises himself as curing "Women and other infernal diseases."

I need scarcely remind my readers that there are many

ways of advertising, and appeals to the eye are often more successful than appeals to the sense. I was one day strolling through a narrow, meandering lane with tiny "booths" which serve as shops, with dilapidated houses and with ragged children who swarmed all over the place. I had reached almost the end of the lane when I noticed on the right-hand side a rich-looking building, with shining brass lamps, a fine entrance, two beautifully carved seats on either side, and more noticeable than all an elaborately dressed man with a sword in a superb sheath, standing in front. My first impression was that this must be a mosque. Yet it did not look like a mosque. I thought it might be a *medrassa*—a school. But I could not understand why so noble a looking shaikh should stand guard outside a *medrassa*. However, I was not allowed to stand there for long deciding what it might be, for the shaikh came up to me and in silver-tongued speech asked me to enter; it was free to anybody, Muslims and Infidels alike, patronised by all the saints of the town, the envy of all the country, and he who entered partook of the blessings of Allah. "If your lordship," he said respectfully, "would deign to dignify this noble building with your presence—well, so be it." Then he shrugged his shoulders and almost pushed me into the overheated building. I walked in, and when I was inside the palatial hall you can perhaps imagine my surprise when I discovered Turkish towels hanging on the backs of chairs right round. It was the Turkish Baths!

I will end my account of the gentle art of suasion in Palestine with an incident that happened to me and which illustrates a more subtle type of advertisement than those to which I have already referred. I had hired a car to take me to Safed. The chauffeur, as is usual, asked for an exorbitant fee, and after long and animated bargaining, carried on in a hotchpotch of three languages, accepted a-fifth of the original charge on condition that he might take two other people in the same car. I did not object.

When the car arrived it was found to contain four passengers. I was angry.

"You said there were to be only two others in the car!"

"That is so, but he"—he hitched his head sideways—"is my son."

"That doesn't make any difference."

"It is a larger car."

There was nothing for it but to get in and squeeze myself into a seat. But the chauffeur still made no attempt to start up the car.

"Why are you waiting?"

He smiled broadly. "There is a gentleman. I made a promise to him. He will be here soonest."

The gentleman came, a stout, laughing, jolly fellow. He sat exactly opposite me. The car started. A cool breeze blew. Soon the "squash" was less obvious and we were all before long the best of friends. I was questioned as to my movements.

"So you are going to Safed?" said my stout friend.

"Yes."

"Where are you staying?"

I told him.

"Dear me! What a pity! It is very expensive, very dirty, and the food isn't good."

"That is usual in hotels in this part of the world."

"Not at all. In Safed there is a very good hotel indeed. Inexpensive. Half what you will pay at Blank's. Good food and plenty of it. And spotlessly clean. I am staying there myself." And he told me the name. He spoke good English. I was grateful to him. We arrived at Safed. I jumped out of the car and bade my friends "Good-bye!"

"Shall I show you where the Malon (Hotel) Margulies is?" said my stout friend.

"Don't trouble yourself."

"A pleasure, a pleasure."

He took me there. A small, insignificant, unpleasant-looking affair. To my horror and amusement I discovered that my friend was Mr. Margulies himself.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Greek Loan Result.

The new Greek Loan duly made its appearance last week, the issue being a 6 per cent. loan at 89, attractive terms it would appear but seemingly not attractive enough, as it is reported that 75 per cent. of the loan was left with the underwriters, and the loan opened at about one discount and subsequently went fractionally lower. A number of causes probably combined to bring about this result, not the least of them being, one may assume, the psychological effect of the attitude of M. Venizelos with regard to the internal loan. It was proposed, it will be recalled, to reduce the rate of interest on this loan, but when the consequences of this step became clear the project was abandoned. Merely to moot such an idea is, however, enough to disturb confidence in a country, and M. Venizelos, who is primarily a politician, and is not versed in the ways of finance, clearly made a miscalculation when he ventured into an unfamiliar field with such a startling proposal. Whatever effect this episode may have had is, of course, pure speculation, and there were other potentially adverse factors such as the fact that the loan was not issued under the auspices of the League of Nations (which has come to be such an important factor in regard to Balkan loans) and the proximity of the New Year which made it an unfavourable time for a large issue like this loan.

Roumanian Oil Developments.

Special interest attached to the meeting this week of the Steaua Romana (British) in view of recent developments in Roumania which hold out, at long last, the prospect that Roumania will be able to make full use of her great oil reserves. The effect of the policy of the late Administration was to cramp enterprise and hinder development, for under the Mining Law the extension of enterprise in the oilfields was impossible. Happily, as I have already pointed out, the policy of the Maniu Government is the reverse of that of M. Bratianu, and there is every reason for hope that henceforward the path will be made smooth for progress in the country's chief industry. In his speech at the meeting Sir Albert Stern, who presided in the absence of Lord Greenway, pointed out that the success of the company was intimately bound up with the prosperity of Roumania, whose economic development, he added, has been delayed by lack of capital, but he looks confidently forward to the flotation of the Stabilisation and Railway Loan which "should herald a new era of prosperity." Sir Albert Stern had some interesting figures to give with regard to the production of the Roumanian company. For the year ended June 30 last this amounted to 578,964 tons which represents an increase of 20 per cent. on the previous year's total. Then for the five months ended November 30 last the production was 300,273 tons as compared with 243,989 tons for the same period last year. Like all oil concerns the company has been handicapped by the low selling price of oil products, and steps have been taken to counter this factor by cheapening the cost of drilling and production. The company's drilling programme is being continued, and it is considered that the increase in production, to which reference has been made, will be continued in 1929 until the Steaua Romana's production amounts to 80-90,000 tons per month which represents the present crude oil capacity of its refineries.

America and Artificial Cotton.

The news that artificial cotton is to be put on the market next year is evidently occasioning grave concern in America which has so far had matters all her own way in the cotton market. The cotton growers of the Southern States are reported to have written to the Department of Commerce at Washington asking for information as to the project, and it will be interesting to learn the nature of the report they receive, for questions in the House of Commons recently elicited no information and Americans cannot expect to be more fortunate, though it will be possible further, of course, to include a map of Great Britain with the counties of Essex and Sussex where the artificial cotton is being grown delineated in red or some other striking colour. Joking apart, it is no matter for surprise if the American cotton growers should be concerned at the development, for it is the type of cotton they produce which will be affected, and if it is possible to produce it on a large scale it is going to make a great difference to them, while from our point of view it has two important aspects, the possibility of recapturing markets by being able to produce cotton goods cheaper, and a new support for the sterling exchange.

Sudan Trade Progress.

Details of the trade of the Sudan for the first nine months of this year make a satisfactory showing compared with the figures for the corresponding period of 1927. The value of the imports is £E4,550,529 as against £E4,256,654, while that of the exports is £E5,219,478 against £E4,596,124. With the exception of Government imports, which are £E92,885 down, every item in the list shows a more or less substantial increase, ranging from £E26,379 for re-exports to £E623,354, in the case of exports, while the total trade comes to £E10,224,115 as compared with £E9,153,165. This is not at all a bad result for nine months, and the increase in the imports affords a satisfactory indication of the improvement of the country's purchasing power, while the increase in the exports bears tribute to the growing and potential value of cotton to the Sudan. It is not wise, however, to wax too confident at the moment as to the development of the Sudan as a market, for dura is the keynote to the position, and it has not yet been found possible to permit the export of this commodity again.

Lord Inchcape on Trade.

It is no exaggeration to say that no meeting is looked

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

forward to with more eagerness than that of the Peninsular and Oriental Steam Navigation owing to Lord Inchcape's practice of dealing with the general outlook in his speech on that occasion. While he was guarded in his remarks at last week's meeting, a note of subdued optimism was in evidence in his reference to the prospects of a trade revival. He pointed out that at the present time there is more tonnage in the world than is required to carry the cargo available, while prices are still far above the pre-War level, but he believes that better conditions will ultimately prevail, and he feels certain that this country will continue to hold the supremacy on the sea that she has held for generations. He takes the view that the trade of the country will revive before long, "especially as the Government appears determined to pursue a path of economy in public expenditure and to ease the burdens on industry."

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 18.

The King's illness and the slump in Wall Street have together conspired to produce a dull and irregular tendency in the Stock Markets, though the more favourable nature of the former towards the end of the week helped to produce a steadier tone. Business, however, is on a very much smaller scale than in the recent past, and there is little prospect of expansion until after the turn of the year. Home Rails, as the dividend season approaches, remain dull on apprehensions that such undisclosed economies in working expenses as have been achieved will not be sufficient to offset the declines in the published traffic receipts. In the more speculative sections irregularity has been the order of the day, the gramophone and artificial groups being lower. There has been considerable activity in cement shares, and a few iron and steel descriptions have exhibited a firmer tendency.

Balanced Capital.

Balance, American authorities never fail to tell us, is essential to good business management; there must be balance between sales and production, between production and purchases, between income and expenditure. It is equally true that there must be balance between the classes of capital. By this we mean that the capital of a company should be so arranged as to ensure justice to the various classes of security holders. Top-heavy capitalisation—the reverse of balance is capitalisation—is unsatisfactory to all who are financially interested in the concern. Let us suppose a company having a capital of £25,000, divided into £20,000 in preference shares and £5,000 in ordinary. Assuming that the company is gaining a normal return on its working capital, any falling-off in its profits would probably be immediately disturbing to the preference shareholders. It is true that in similar cases preference shareholders are often given the right to participate in any excess after the ordinary shares have received a fair dividend, but this right is only compensation for the fact that the preference shareholders are not in as secure a position as one expects with shares of that type. The security of income of the preference shareholders is similarly impaired when there is an excess of

debentures in relation to the share capital. On the other hand, where the volume of prior charge capital is small, the company is not making full use of the possibilities of raising well-secured capital at fairly cheap rates. Such capital would earn more than the interest or dividend paid, and the excess would serve to increase the earnings available for the ordinary shareholder.

French Rentes.

Attention is directed to the merits of French Government stocks by the recent publication of the Department of Overseas Trade's report on economic conditions in France. It is shown that the restoration of the gold standard in June last was but the climax to a quiet reconstruction of her industrial life. Not merely have the devastations caused by the War been repaired, but in many ways the position in 1927 showed an advance upon that of 1913. An unfavourable trade balance of £51 millions has been converted into an export balance of £19 millions. The outputs of pig iron and of steel are respectively seven and eight times as great as fourteen years ago, and the coal production is also much higher. Unemployment is almost negligible. These are results of which this country might well be envious, and some useful lessons might be drawn from the causes of this prosperity. It is true that the increases are in part due to the acquisition by France of Alsace-Lorraine, one of the most important industrial centres of Europe, but the fundamental causes are the industriousness of the French workpeople, the replacement of old by up-to-date machinery, and a movement towards concentration and improved organisation. Prosperity which has such solid bases is almost certain to continue. As a result of comparative lack of attention 3 per cent. perpetual Rentes may be bought to yield £5 3s. per cent., while the 4 per cent. Rentes which have the advantage of bearing interest payable at the Bank of England yield £6 4s. per cent.

The Drapery Trust and Drage's.

The Drapery Trust, which is controlled by Debenham's, have made a provisional agreement for acquiring control of Drage's, Ltd., the well-known hire-purchase furnishing concern. The Drapery Trust will guarantee the maximum dividend of 10 per cent. on Drages Participating Preference shares for ten years, and the present Ordinary shares are to be converted into Preferred Ordinary, with a fixed non-cumulative dividend of 15 per cent. also guaranteed by the Trust. In return the Trust is to be issued 2,000,000 Ordinary shares of 1s. each. The reason given by Drage's directors for entering upon the agreement is the need for increasing capital in a growing business in a trade which requires a relatively large capital. For this reason the Drapery Trust has undertaken to provide £300,000 of additional working capital as required. The scheme has been criticised on the grounds that the capital required could have been raised more cheaply in other ways. Since its transformation into a public company Drage's has distributed only a portion of its earnings as dividends, and under the agreement the whole value of the equity in Drage's would pass to the Trust. On the basis of last year's earnings the considerable sum of £54,000 would be available, or 54 per cent. on the price to be paid by the Trust. The suggestion that the company could have obtained the capital required more cheaply from its shareholders would therefore seem reasonable.

An interesting little brochure has been issued by the American Express, giving details of their tours in Egypt, the Sudan, Syria, and Palestine for the current season. The brochure, which is illustrated throughout, contains details of itineraries to please all tastes, and, coming at the present juncture, when the delayed fogs of November are at last upon us, it will carry a special appeal to all in a position to leave this country for sunnier shores for a long or short period during the tedious winter.

Irrigation in Egypt—IV

LAND DRAINAGE.

By H. HINDMARSH.

In countries with a heavy rainfall the rivers run in valleys and carry off surplus water, but the reverse is the case in Egypt where the rainfall is negligible. The cultivable land of this country is built up entirely of silt deposits brought down by the Nile; the deposit is thicker, and the land level consequently higher near the river branches, both those which exist to-day and many others long abandoned but clearly traceable by the ridges which they have formed.

Irrigation canals have been built on top of most of these ridges in order that water may be led down a gentle slope to irrigate the land on either side, and so closely do some of these canals follow the winding course of long-forgotten streams that they do not look like canals at all.

To carry off surplus water it has been necessary to construct other and quite different channels in the low ground between the ridges. Running thus in valleys and increasing in volume from source to mouth, the main drains of the Delta might be described as artificial rivers, and some of them are quite big enough to justify such a description.

For instance, the Gharbia Drain has a natural catchment area of about half a million acres and a length of 60 miles from its source near Tanta, in the centre of the Delta, to its mouth on the sea coast near the most northern point of Egypt. In its lower reaches it is about 40 yards wide and 12 feet deep.

For the first 30 miles it flows with a fairly steep slope and well below land level, so that the country traversed can all be drained by gravitation, then the water slope becomes flatter and the land relatively lower, until, for the last 15 miles of its course, the drain has to run between banks to prevent its waters from spreading over a flat swampy area of which the surface is almost at sea-level.

As the Mediterranean is practically tideless a system of tide sluices, such as operate in the Fen District of England, cannot be used, and it is necessary to resort to pumping to lift the drainage water of the low northern regions over the banks into the drains which carry it to the sea.

Into the numerous main drains flow branch drains, which in turn receive the water of smaller branches. This network of drains covers most of the perennially irrigated area of Egypt. It has been steadily built up and extended by the construction of new branches and the improvement of old ones, but there are still a good many gaps to be filled.

The general policy is to make so many branch drains that one may pass within one mile of every estate; that is to say, no land owner should have to dig a ditch more than a mile long to get rid of his drainage water.

In some countries such as Holland, most of this work would be done by local enterprise, but in Egypt all irrigation and drainage work is undertaken by the Central Government, which has not only to dig the drain in a strip of land which it has bought for the purpose and to build all the bridges and other works required, but also to maintain it afterwards—cut the weeds and dig out the accumulated mud from the bed. This maintenance is a troublesome and costly business. No special drainage tax has so far been imposed; drainage is included in the services rendered by Government to the landowner in return for the fixed land tax which he pays every year.

The standard aimed at is to keep the water surface of the drains five or six feet below the land level, so that every field may get four feet of drainage when allowance

has been made for the water slope in the connecting ditch. Some landowners have stated that this is not enough, but there are many more who content themselves with three feet or even less, rather than go to the extra expense of deepening their ditches. To do so is costly, because every foot of extra depth in a ditch means at least four feet more in its overall width. On many estates about 15 per cent. of the total area is occupied by open drains and thus is thrown out of cultivation.

Covered drains have been tried fairly extensively, but they hardly seem to pay. Egyptian soil is fine but permeable, and soon finds its way into the pipes, which after a very few years have to be dug up, cleaned, and relaid, a process during which they are apt to be broken.

The practice in newly reclaimed marsh land, where the salt is still near the surface, is to dig field drains about two feet deep and twelve to fifteen yards apart. These little open ditches are generally about 100 yards long, and discharge into collectors about three feet deep, which in turn flow into the main ditch where the water should be four feet below land level. After a few years of cultivation and irrigation the salts will have been driven down well below the surface, and alternate field drains may be filled in and dispensed with. At a later stage this process of elimination may be repeated, and so on; but, in the Lower Delta at least, permanent drains are needed every 100 yards or so if the land is to be kept in good condition.

Drains are necessary, not only to get rid of salt, but to keep down what is called the "Water Table," of which the level is indicated by the depth to which a pit may be sunk without coming to water. It is only this limited depth of soil which is available for the roots of a plant, and, if drainage be stopped and the water-table allowed to rise, part of the root system will be asphyxiated, and the development of the plant will be checked until it can make good the loss by growing other rootlets nearer to the surface.

No proof of the value of drainage can be more striking than the rapid decline in fertility of estates when the ditches have been neglected for a year or two. Barren patches appear in the field, and a grey incrustation of salt may be seen on the surface as it dries off after each watering.

About two-fifths of all the Delta land surface is less than six feet above sea level. This low land consists of a broad band all the way round the coast, and it is only separated from the Mediterranean Sea by a line of sand dunes varying in width from a few hundred yards up to five or six miles. It is very flat, and the main drains of artificial rivers flow through it with their water surface nearly at land level.

In this region are about one and a-half million acres of waste land, which represent Egypt's main reserve of future wealth. Its reclamation and subsequent cultivation must provide employment and livelihood for succeeding generations of her constantly increasing peasant population. Both climate and soil are good, and seem to be specially suited for the production of the finer grades of cotton. This is amply demonstrated by the results obtained where a company or large owner has banked off a block of land, drained it by means of pumps, and reclaimed it for cultivation.

Between the low waste lands of the Northern Delta and the relatively high and completely drained land further south there is a zone about ten miles wide, most of which is cultivated.

Its depth of drainage being insufficient, the crops grown do not give a yield commensurate with the amount of labour and valuable irrigation water expended in their production.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

It was for many years the policy of the Government to leave the owners to find their own remedy by the installation of pumps to lift water from their private ditches into the public drains. The great advantage of this plan is the enforced economy of irrigation water, which no one will waste into a draining ditch if he knows that he must himself pay for pumping it out again. A certain number of drainage pumps have been erected all along the northern fringe of cultivation, but the majority of the peasants have not the capital to erect such installations nor the capacity to keep them running efficiently.

When it became evident that the natural development of the country was being checked for lack of drainage, the Government decided to do the pumping wholesale by means of big units with a high mechanical efficiency. The war interrupted these schemes, but since its termination two pumping stations serving 70,000 acres have come into action, and another for 100,000 acres is in course of construction.

Work is proceeding on the basis of a fifteen-year programme, covering about 600,000 acres in all, and comprising projects for the complete drainage of all the partially cultivated intermediate zone, and as much of the northern waste land as can be developed with the supply of capital, labour, and extra irrigation water likely to become available within this period.

The general scheme is to leave all the higher lands to drain through their branches into the main drains which flow freely to the sea, passing between banks through the low land, where the water of the branch drains will be lifted into the main drain by means of pumps electrically driven with current from central generating stations.

The branch drains are to be grouped together so that each pumping station may deal with the drainage of from 30,000 to 100,000 acres, and efficient pump units each discharging up to ten tons of water per second may be used.

Irrigation and drainage must go hand in hand. It is useless to drain land without providing enough irrigation water to plant it with the summer crops of rice and cotton, which alone can render its reclamation economically possible. This entails not only the construction of a network of new irrigation canals in the area to be reclaimed, but the considerable enlargement of main canals, which must carry water to it through regions already cultivated, as well as the provision of increased reservoir capacity to enable a greater portion of the annual surplus flow to be impounded and released for use at the season of the low Nile.

The overall cost of the scheme, including dams, canals, drains, pumps, and subsidiary works, is undoubtedly formidable, but a substantial part of the initial outlay may be recouped by the Treasury from the sale of many thousand acres of State land, now unproductive and quite worthless, which will attain a value of at least £30 per acre as soon as they are given facilities of irrigation and drainage.

The indirect gain to the community is much more important than the direct return to the Government. To continue her economic development Egypt must have increased agricultural production, and the surest method of getting it is by increasing her area of well-drained land.

IRRIGATION PROJECTS.

At the present time there exist various projects, some of which have already been studied and are actually under execution, while others are as yet under examination. Some of the latter will be begun in the near future and the remainder will follow.

The most important of the works under execution are the following:—

Upper Egypt.

(a) The construction of Nag Hammadi Barrage on the

Nile in Upper Egypt and its subsidiary works on the Eastern and Western sides of the Nile.*

(b) The erection of a main power station near Esna, Kena Province, for generating the required electric current and its transmission over a distance of more than 120 kilometres, to work 14 big pumping stations serving various isolated basins, the total area of which is a little above 50,000 acres in Aswan Province. This project includes the digging of canals and other channels which would facilitate the proper water distribution in those localities. The cost of the work will amount to one million pounds to be spread over three years ending 1930-1931.

Middle Egypt.

(c) The improvement of drainage in Middle Egypt, which involves the remodelling and deepening of the main drains, and the increasing of the number of pumping stations, in order to ensure efficient drainage in this part of this country. The estimated cost is £E500,000.

(d) Improvement of the present irrigation systems by remodelling the present canals and cutting new subsidiary channels. This work will cost £E500,000.

(e) Improvement of the present lines of navigation by connecting the main navigable canals with the Nile. This work will cost £E220,000.

(f) Carrying out defence works against damages caused by torrents, such as digging special channels to carry the water of torrents directly to the Nile. The grant allotted for the execution of this work is £E50,000.

Lower Egypt.

(g) Improvement of the irrigation system by the construction of new canal branches for the proper water distribution. The sum to be expended on this project is £E1,705,000.

(h) Improvement of the drainage systems. This comprises the following:—

(1) Deepening and remodelling the existing main drains.

(2) The construction of new branch drains.

(3) Erection of three main generating power stations, one in the Eastern Delta, the second in the Central Delta, and the third in the Western Delta, to supply the electric power and distribute it by means of transmission lines to the various pumping stations for drainage purposes, and lowering the water table in the northern water saturated zones of Lower Egypt.

The estimated cost for these works is £E4,726,000.

(i) Improvement of the lines of navigation by means of cutting new connecting channels between some of the existing waterways. The grant allotted for these works amounts to £E302,000.

According to the programme of execution laid down, the above projects, forming the first category of works in hand, will be completed in three years' time.

The second category of important works for execution in the near future comprises the following projects:—

(1) Heightening the Aswan Dam.

(2) Generating electric power from the Aswan Dam.

(3) Construction of a new barrage over the western branch of the river in the vicinity of Dessouk town, 175 kilometres north of Cairo.

(4) Construction of Gebel Aulia Reservoir.

(5) Strengthening of Esna, Assiut, and Delta Barrages.

(6a) Development of cultivation to fallow land in Lower Egypt.

(6b) Conversion to perennial irrigation of the lands now under basin irrigation in Upper Egypt.

* This Barrage was described in the previous article in the issue of THE NEAR EAST AND INDIA of December 13.

The third category of works which are under study, and will be executed in the future, are the following:—

- (1) Opening a new cut through the Sudd Region in the Sudan.
- (2) Lake Albert Reservoir.
- (3) Lake Tana Reservoir.
- (4) Drying the Lakes of the Delta adjoining the Mediterranean Sea.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at October 31, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E14,329,169; Egyptian Government, £E17,644,491; Sudan Government, £E137,082; Mixed Tribunals, £E1,836,321; bankers' accounts, £E732,046; cheques and bills payable, £E288,752; sundry other accounts, £E2,146,475—£E42,684,961. Assets: Government securities and securities guaranteed by the Egyptian Government, £E20,634,533; sundry securities, £E519,633; advances on merchandise, £E4,156,801; advances on securities, £E5,717,055; advances otherwise secured, £E1,510,937; bills of exchange, £E2,386,100; local bills discounted, £E668,683; buildings and furniture, £E249,215; money at call and at short notice, £E502,125; bankers' accounts, £E469,659; sundry other accounts, £E1,414,696. Cash: Notes, £E2,162,760; gold, £E489,903; silver, nickel, etc., £E226,977—£E2,879,640—£E42,684,961. Issue Department.—Notes issued, £E33,800,000—£E33,800,000. Gold, £E3,339,570; *British Treasury Bills, £E13,560,430—£E16,900,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, National War Bonds and British War Loan, £E15,400,000—£E16,900,000—£E33,800,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

The new Roumanian Government has decided upon the reorganisation of the railways, and is, it is reported, to invite a number of experts from abroad to give their advice and help in the matter.

The new Sofia power station, which has a capacity of 35,000 h.p., was formally opened recently in the presence of King Boris and the members of the Bulgarian Government.

Sir George Beharrell, President of the Society of Motor Manufacturers and Traders, arrived at Southampton on December 14 from New York on board the *Majestic*, after a three months' visit to the United States, Canada, and Japan in connexion with the properties of the Dunlop Rubber Company, Ltd., of which he is managing director.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo branch:— "The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending November 30 amounted to £E5,261,673, against £E5,112,489 for the corresponding month last year, and exports to £E7,459,417, against £E6,059,778 in November, 1927. Cotton exports were £E6,176,155, against £E5,136,688."

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Mild Steel Plates, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of steel, mild, plates, ordinary steel; mild, bar, angle and flat, rivets, bolts, and nuts required for the Government Workshops, Bulaq (January 6); crockery required for the Government Workshops, Bulaq, Cairo (January 14); and for the supply and erection of aerial wire ropeway at Sollum, February 28.

Miscellaneous.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for sanitary fittings, paving cement tiles, steel boiler tubes.

Various Equipment.—The Section des Municipalites et Commissions Locales, Ministry of the Interior, Cairo, invites tenders for the supply of additional equipment, comprising a Diesel engine driven D.C. generator set, D.C. rotary balancer and accessories for the Kafr El Zayat Electric Station. January 31. (D.O.T.)

Paper, Etc.—Tenders are invited by the Ministry of Finance for the supply of paper, stationery, chemicals, for Photocopying Office, other miscellaneous articles such as canvas sacks, required for the year 1929-1930. January 31.

Electric System.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a proposed electric system for Beba. January 24. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. *Britannia* for Bombay (Birkenhead, December 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. *Holywell* for Calcutta (Birkenhead, December 24).

Bibby Line.—S.s. *Lancashire* for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, December 26).

British India Line.—S.s. *Hatimura* for Bombay and Karachi (London, December 22); s.s. *Manora* for Colombo, Madras, and Calcutta (London, December 29).

Cunard Line.—S.s. *Bactria* for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool December 22, Swansea December 27); s.s. *Brescia* for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool January 19, Glasgow and Swansea January 18).

Johnston Line.—S.s. *Jessmore* for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. *Quernmore* for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26). (The first sailing of the season to the Danube ports of Galatz and Braila.)

P. and O. Line.—S.s. *Ranchi* for Bombay (London, December 21); s.s. *Nagoya* for Calcutta (London, December 22); s.s. *Ranpura* for Bombay (London, January 4); s.s. *Bangalore* for Calcutta (London, January 5).

Prince Line.—S.s. *Syrian Prince* for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, December 22); s.s. *Highland Prince* for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 20).

Ellerman and Papayanni Lines.—S.s. *Andalusian* for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); s.s. *Algerian* for Algiers, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool December 22, Swansea December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 28); s.s. *Kyno* for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 29); s.s. *Trentino* for Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 5, Swansea January 5); s.s. *Lesbian* for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool January 5, Swansea January 10). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

48, FENCHURCH STREET, LONDON, E.C.3.

Engineering Topics

By G. B. B.

Earth Roads.

When we in England are talking of roads, road construction, and highway engineering generally we are prone to forget that in many districts even water-bound macadam roads are hardly ever found, whilst reinforced concrete roads are unknown. In many parts of the Near East and in many districts in India earth roads still constitute a very large proportion of the highway system. It is true that the authorities are placing gravel and broken stone surfaces on these as quickly as labour and funds will allow, but there is still a large percentage of roads in those localities which will have to be constructed and maintained as earth roads pending the era of reconstruction which everyone so fondly hopes is near at hand.

Such location parties as are at work on road building in the Near East are taking preliminary profiles and determining the heights of embankments and the required capacity of drainage structures. In location work the greatest changes that have taken place during the past few years have been in connexion with matters of alignment and sight line. Wherever possible the endeavour is to obtain a clear sight line of 500 feet at least on both horizontal and vertical curves. In ideal circumstances a curve of 16 degrees would be the largest allowable, but that ideal is not always reachable and much sharper curves sometimes have to be made.

The features that make an earth road maintainable, as has been said before, must be built into the road during its construction. Efficient maintenance can be accomplished only by preventing damage instead of repairing damage. It consists, for example, in keeping ditches and culverts cleared of refuse so that road flooding will not occur, rather than in repairing the effects of the flood after the damage has been done. Maintenance work in general is not so much a matter of knowing what to do and how to do it, but rather to keep on, continually, doing what we know ought to be done. A successful maintenance operator should have a keen interest in his work, and it is a difficult matter to get part-time employees to take an interest in anything other than drawing their wages. Adequate and systematic maintenance is necessary to keep

miles of even earth-surfaced roads in condition, and this constant and systematic work can only be done by men who give their whole time to road patrolling and maintenance. There is a tendency amongst some to look down on the building of earth roads as something almost, if not quite, beneath notice. Yet in my opinion there is no more difficult problem—I quote Mr. H. R. MacKenzie, the chief engineer of the Highways Department of Saskatchewan, as my authority—confronting highway engineers than that of properly constructing and maintaining an earth road. The work may be, and most frequently is, less spectacular than the construction and maintenance of hard-surfaced roads, but there is a greater latitude in location, method of construction, and choice of materials, consequently there is more scope for the exercise of sound judgment on the part of the engineer.

Tarred Surface.

One of the best things to do to an old gravel or water-bound macadam road is to tar it, and this work can be easily and quickly done—when one knows how. There is some impression about that it does not matter how it is carried out, as it is certain to be successful. That is by no means the case. One has only to travel a few score miles over roads thus treated to realise what a wide variation there is in the effects obtained. The best advice given is that where an old gravel or macadam road is used as a foundation for a new tar-treated surface, the surface of the old road must first be brought into a smooth and even condition, with a proper camber. This can be done by scarifying and re-rolling, or by patching all holes and filling up all hollows with water-bound macadam. Generally speaking, if the road is in bad condition, the quickest and cheapest thing to do is to scarify it and then run a roller over it. The worst of that is that it tends to weaken the foundations of the road.

After this is done and the road is in a dry condition, it should be swept clean and a thin dressing of hot boiled tar should be applied, over which a coating of stone chip-pings or coarse gravel should be strewn. Sand is next to no good for this work, and rounded, water-worn gravel has such a tendency to rock and roll as to make the task of forming a good hard surface both slow and difficult.

Important Contracts.

I have just heard that Ruston and Hornsby, Ltd., of Lincoln, have received an order for a giant electrically-operated power shovel which, it is said, will be the largest excavator in the world for its particular sphere of utility. The machine will weigh, approximately, 380 tons and will carry a $7\frac{1}{2}$ cubic yards bucket and will have a jib 90 feet in length. The ordinary working capacity of this machine will be 200 tons of clay per hour, although it would be possible, were occasion to arise, to speed this up considerably.

I am informed by the Cement Marketing Co., Ltd., of Portland House, Tothill Street, Westminster, that they have received an order for 6,000 tons of "Ferrocete" for the construction of a hangar at Seville. This is to house two giant airships which are to operate an air service between Spain and the Argentine. It is significant to note that this cement was tested in competition with various continental brands and was selected entirely on account of its quality and its rapid hardening characteristics.

Babcock and Wilcox.

Among engineering firms which are finding considerable scope for business in the Near East and India mention may be made of Babcock and Wilcox, Ltd. This firm are supplying to the Constantinople Tramways four Cross

type marine water tube boilers, each capable of evaporating some 50,000 lb. of water per hour. The boilers are complete with superheaters, chain grate stokers, and economisers, and the furnaces are equipped for the burning of oil fuel. For the Egyptian Government—for the Belgas Power Station—Babcock and Wilcox have under construction three C.T.M. water tube steam boilers, each capable of evaporating approximately 40,000 lb. of water per hour, the boilers being complete with superheaters, economisers, steel chimneys, and furnaces arranged for the burning of oil fuel. In addition, coal handling plant is being supplied.

Then for the Malta Government Electricity Works, a plant is in hand for evaporating 25,000 lb. of water per hour. In this case also chain grate stokers, economisers, pipework, and other accessories are included. Other contracts in progress of execution or recently supplied by Babcock and Wilcox include two boilers complete with stokers, soot blowers, and other accessory equipment, for the Government of India Railway Board for Talchar Colliery; three complete steam-raising units for the Western India Match Co., Ltd.; two units for the Motilal Hirabhai Spinning, Weaving Manufacturing Co., Ltd.; and two similar boilers for the Vikram Mills Co., Ltd. Numerous other plants could be referred to, but sufficient have been indicated to show the wide area over which the famous Babcock boiler is being installed in the Near East and India.

NEAR EAST MARKET REPORTS.

The December issue of the Monthly Review of Barclays' Bank, Ltd., contains the following reports:—

Egypt.

The markets for both spot and futures cotton have remained steady during the month, and although premiums have continued to sag under pressure of sales, the general tone has been one of strength. The publication, on November 8, of the American Bureau Report showing an increase of only 140,000 bales over the previous estimate led to a strengthening of the markets, as a considerably higher figure had been generally expected. The crop estimates for Egypt have crystallised around 7,500,000 kantars, of which 2,500,000 kantars is Sakellaridis. The latter figure is regarded generally as too high, but some authorities maintain that it will ultimately be found to be too low, owing to the amount of other growths mixed with it in the interior, in spite of the law against mixing. The chief demand has been for Ashmouni cotton, and as there is a record yield of this growth, all demands have been easily satisfied and premiums have shrunk considerably. Record prices have been paid for Extra Sakellaridis grown by the State Domains. This cotton is eagerly sought after by spinners of very fine counts, as it is practically the only cotton that can be relied upon to be uniform in staple throughout. The spot movement has been large, the daily sales averaging 6,500 bales for the month, but arrivals have been so heavy that the railways have been unable to cope with them and a certain amount of congestion has resulted. The grower continues to market his produce rapidly, and at least two-thirds of the crop is already in sight.

Cotton seed has been quietly steady, with a slightly weakening tendency, owing to heavy arrivals and lack of serious demand, except for local consumption. The cotton goods market has been active and prices have improved by about 3 per cent. The steadiness of the cotton market has stimulated demand from the interior and although

stocks are now reduced, arrivals are small. Manchester goods have also been in better request and stocks are decreasing, but prices have not changed. Under the influence of the New York and Java markets, sugar quotations have weakened. Nevertheless, the spot market has been active and the demand for local consumption and for export has absorbed all fresh arrivals. Importers consider that actual prices are low and business has been done in June/July, 1929, shipments of Java sugar. The spot market for flour has been steady owing to reduced stocks, the demand for local consumption and for export having been very satisfactory. Prices for forward deliveries, however, have been irregular and have shown a weak tendency. Large quantities appear to be afloat. Under the influence of the producing markets, all varieties of imported rice have been in good demand and quotations have advanced, while there is a tendency towards further improvement. Egyptian rice has been in fair demand, but holders are not pressed to sell.

The export demand for cabots has been satisfactory and sellers have only been inclined to dispose of their goods at advancing prices. Stocks are reduced and quotations show an upward tendency. No business of importance has been done in gunnies, demand having been quiet and prices irregular. The existing stocks are considered to be quite sufficient for requirements. The cereals market has been steady, with a normal demand, prices, if anything, being slightly higher than a month ago. Stocks are decreasing, except in beans. Business in stocks and shares has been active, and quotations generally have been higher than in the previous month.

The Sudan.

There has been little change in the situation during the period under review, markets being quiet but not depressed. Stocks of the old gum crop have all been exported and the new crop, which appears to be of good quality, is expected to be normal in size, rains having been satisfactory in the gum-producing areas. Contracts for new crop shipments in December/January have taken place at 40s. per cwt. c.i.f. United Kingdom for natural and 42s. for cleaned. It is estimated that the sesame crop will be approximately the same as last year, but the forecast of the groundnut crop at 5,000 tons shows an increase over a year ago. Contracts for groundnuts have been made at £15 15s. per ton c.i.f. United Kingdom. It is anticipated that the dura crop will be below average and, in that event, although there will be ample for the country's requirements and it will not be necessary to import, there will be no possibility of export being permitted.

Palestine.

Retail sales generally have been slightly better than in the previous month, but, partly owing to the prolonged summer, business activity, compared with the corresponding period last year, has been relatively small. As a result of the more or less complete failure of the wheat crop, imports from North Africa are taking place and the arrivals are having a steadying effect on the local market. The Government has arranged to purchase 1,000 tons of best Morocco wheat for sowing, which will be distributed in those areas where little or no stocks exist. Prices of imported wheat have varied between £13 5s. to £14 5s. per ton, according to quality, but moderate supplies from America are expected at an early date at approximately £12 5s. per ton. The importation of foreign wheat is expected to continue until August, 1929, as, owing to the failure of the crops this year, local milling will be almost entirely dependent upon foreign wheat. Australian flour at £13 10s. per ton has been imported in larger quantities than usual and is being mixed with flour from hard wheat for baking purposes.

In the Colonial goods market, sugar, in sympathy with American markets, showed a distinctly downward tendency during the latter half of the period under review, and a decline of £2 per ton was recorded, but prices have since improved, Java sugar being quoted at £14 10s. per ton. The coffee market is stagnant and buying on retail account is reduced to an absolute minimum, but rice has been active, with prices showing an upward tendency. The cotton goods trade has been normal and business in woollen goods satisfactory, but dealings in silk goods have been quiet, although prices are unchanged.

Company Meetings.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

Increased Dividend on Deferred Stock.

Trade Conditions and Outlook.

Lord Inchcape's Address.

Viscount Inchcape, Chairman of the Peninsular and Oriental Steam Navigation Company, presided on December 12 at the company's eighty-eighth annual general meeting.

The report and accounts having been taken as read,

His Lordship said the company had at the moment no bills payable. The setting aside in good years of generous sums for depreciation had enabled them to face the bad times of the last few years without the passing of dividends or writing down capital, as so many great industrial concerns had had to do, with the result that the 324 steamers of which the P. and O. are absolute proprietors were worth to-day considerably more than their book value. The board had, therefore, considered it would not be imprudent if, during the present cycle of bad trade, they contented themselves with providing a more modest amount for depreciation, with advantage to the Deferred stockholders. As they, the stockholders, had seen from the report and accounts, the board proposed to give a final dividend for the past half-year of 7 per cent., tax free, making 12 per cent. for the year instead of 10 per cent. as was paid last year. This would involve an increase of £91,850 in the amount distributed, to which the stockholders would doubtless agree, unless they regarded it as rather reckless finance. (Laughter.) Last year's issue of a million of Deferred stock at the price of £200 per £100 stock had been fully taken up, and to-day the stock stood round about £275, giving the subscribers a bonus of some three-quarters of a million in capital value. Although the issue had created an additional million of Deferred stock, it had given them a million of free cash, which was more than enough to meet the cost of their new ship, "Viceroy of India."

£1 Deferred Units.

Recently it had been suggested that instead of the Stock Exchange quotation being per £100 of Deferred stock, it should be per £1 of stock. The board's acquiescence was sought merely as a matter of courtesy, and it was accorded, because, under the charter, a holder of a minimum of £10 or more of Deferred stock was entitled to have £1 of stock added to his holding. This new quotation should increase the number of the company's stockholders—not a disadvantage, because the more so-called capitalists there were in the country, the better for everybody.

The Insurance Fund.

He had mentioned last year that the amount then standing to the credit of the Insurance Fund, £3,280,000, would probably, when outstanding claims had been settled, be in the neighbourhood of three millions; at September 30 last the amount at credit was £3,073,278 10s. 4d., and the forecast of a year ago was likely to be fulfilled. The risks of their allied companies were now insured in the open market at, he believed, adequate premiums; but if premiums were raised it might become necessary to bring the risks back into the P. and O. Fund. He was unselfish enough to hope, however, that the underwriters' book would be on the right side, as theirs certainly had been.

Sinking Fund.

Continuing, his Lordship said that the setting aside of £103,132 7s. 2d. towards redemption of their Debenture stock of £7,000,000 would bring that fund, as at September 30 last, up to £1,360,000, and it was proposed to add to this an annual sum calculated at 5 per cent. compound interest over the period prior to redemption, which would bring the fund in 1940 to about £2,500,000. In 1940 they would, therefore, have to find £4,500,000 from their resources or issue fresh debentures, which, he added, they might be able to do at less than 5½ per cent., their present average rate of interest. The sinking fund, he pointed out, appeared on both sides of the accounts, and was entirely kept apart from their other resources, and was invested in Government securities.

Investments.

Their general investments stood in their books at to-day's market value, and their investments in allied companies at much less than their intrinsic worth, so that they might, as Lord Fisher once said, sleep peacefully in their beds.

The Work of the Fleet—Remarkable Figures.

The 324 vessels of the P. and O. Company and its allies had run throughout the year without serious mishap. They had traversed 17 million miles; made 30,000 port entries; carried 2,000,000 passengers. These figures spoke volumes for the skill and care of their captains, engineers, and officers, whose motto was "Safety First," but who managed, in ninety-nine cases out of a hundred, to make their ports in schedule time.

The Personal Touch.

Referring to the exceptional gales of the past few weeks, his Lordship said that he saw the "Narkunda" off on the afternoon of November 16 during a very high wind when, thanks to the care of their own and the dock officials, she got safely out of Tilbury Dock. Next afternoon, by wireless, the commander reported all was well, but that having been unable to land the Thames pilot at Dover, he had put him ashore down channel at Torbay. That night the Folkestone-Boulogne steamer had put her passengers ashore at 3 a.m.—nine hours late. A week later he was at Tilbury again to see the departure of the "Rawalpindi." At 5 p.m. the gale was so fierce that their superintendent, Captain Sweny, decided not to risk moving her until next morning. At 10 p.m. the superintendent telephoned to him that he had got the ship safely out of dock. Next afternoon Captain Redhead reported that he had put his Thames pilot on board the Nab Lightship, as it had been impossible to land him at Dover. In answer to a wireless message which he sent to the captain late on Saturday night, he got a reply saying, "All well despite high seas and a strong gale," and that he was making Ushant. That was the night when Channel steamers had been suspended or delayed for hours, and when there were numerous casualties to shipping. Both "Narkunda" and "Rawalpindi" reached Gibraltar on their due dates.

He went down to inspect the "Mooltan" the other day and, noticing the fiddles for the tables in the saloon, said to the chief steward: "I suppose you often have to put them on." His reply was: "I have been in the ship from the time she went into commission five years ago, and I have only had to put them on once, and that was in the Australian Bight."

Captain Brooks, of the "Ranchi," he continued, came in to see him the other day on his arrival from Bombay and said he had experienced a severe gale and high seas in the Mediterranean. He asked if he had shipped much water, and he said, "No, only some spray." He inquired if the vessel had pitched or rolled much, and the captain's reply was: "Oh, no; the 'Ranchi' is a very steady ship—she scarcely moved." He, the speaker, was not sure, however, that all the passengers may have been of the same opinion. He hoped they were.

He mentioned these incidents to show that great credit was due to the seamanship of their captains and officers, to the skill of their engineers, and to the efficiency of their ships. (Applause.)

Economy and Efficiency.

They were, he continued, doing all in their power to effect economies consistent with efficiency and the maintenance of passengers' comfort, and in this way they were being loyally and materially assisted by their shore staff, their captains, officers, engineers, and pursers.

"Viceroy of India."

Their new steamer, "Viceroy of India," 19,500 tons, was launched and christened on September 15 last by the Viceroy's wife, Her Excellency, Lady Irwin. The installation of the vessel's machinery and internal fittings was proceeding, and she was scheduled to leave London for Bombay on March 28.

Old Steamers.

During the year three of the older ships, "Devanha," "China," and "Assaye," had been sold to be broken up, realising considerably more than their book value.

Profit Sharing.

Employees' deposits under the profit-sharing scheme which the board inaugurated two years ago had now reached £864,000, bearing interest, so long as the company's dividend was not less than 10 per cent., at 7½ per cent. per annum. This amount was a testimony

to the thrift of their men and, although it cost, after crediting interest on deposits, some £20,000 a year, he felt sure they, the stockholders, would not grudge the amount. (Applause.)

Insurance of Passengers' Baggage.

The premiums charged under the scheme which they had recently inaugurated for the all-risk insurance of passengers' baggage were very moderate and left only a small margin after payment of claims. The great majority of passengers insured their belongings, and in such cases damage was at once made good by the company, without question, but some passengers did not insure. Insurance would save such passengers much loss and trouble. Some short time ago, when he was in India, he had seen a letter in a newspaper which said that passengers landing at Bombay were constantly losing their baggage. He had thereupon instituted a system of weekly reports. Since the inauguration of these reports in 1925, 36,047 passengers had landed from the P. and O. steamers at Bombay, and the number of packages of baggage was 360,470. Of these only 32 were reported missing, 24 being traced and delivered to their owners. The remaining eight had been paid for. One package, a baby's cot, had been landed in error at Aden, and was eventually found and forwarded to the mother with fifty rupees for the baby, who had been deprived of her cot for a month. (Laughter.)

Passengers' Suggestions.

Suggestions which they sometimes got from passengers were always carefully and courteously answered. One suggestion, which, perhaps ungallantly, he had turned down, came recently from a lady who desired to join one of their steamers as a "beauty specialist." (Laughter.)

The Improved Malta Passenger Service.

In June of this year, in response to a proposal by the Governor of Malta, Sir John Du Caine, and Lord Strickland, head of the Ministry there, it had been arranged that the company's Bombay steamers should call at Malta, on the way to and from Marseilles, every fortnight. The deviation involved an increase of speed between Marseilles and Port Said and *vice versa*, and although the small sum paid by the Maltese Government barely covered the extra fuel consumption, the board had decided to meet the convenience of Great Britain's isolated naval base and colony. He was told the arrangement was greatly appreciated and a good many passengers had availed themselves of it. In making this arrangement they were moved by a sympathetic desire to re-establish the old P. and O. relations with Malta and to extend tourist traffic with the island in its new position under self-government.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent

the Secretary*

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

Work of the Bombay Port Trust.

He had visited many ports in various parts of the world; but in none had he found arrangements excelling those of the Bombay Port Trust for the embarkation and disembarkation of mails, passengers, and luggage. The railway arrangements, too, left nothing to be desired, both inward and outward trains being brought alongside the steamers. As the steamers got larger the Bombay Trust constantly took measures to improve the depth of water, and they seldom experienced any difficulty in getting the ships alongside the Ballard Pier. The stockholders would, he felt sure, agree with him in expressing the board's thanks to the Port Trust and the Railway Administration of India for their care of the convenience of the public.

The Suez Canal.

He would, he said, like to add a word about the Suez Canal. The P. and O. group were the largest users, in point of tonnage, of that great waterway, their dues amounting to about £805,000 per annum. The canal was constantly being widened, deepened, and straightened to accommodate the ever-increasing size and draught of ships, the transit of which was all the time being shortened, and more pontoons for the free use of passengers landing and embarking at Port Said had lately been constructed; the pilot service was most efficient, accidents being rare. He could not speak too highly of the courtesy and help afforded by the canal officials in Egypt. Looking back, as he could do, to the time when the canal was opened—a matter of sixty years ago—the improvement which had been effected, and which continued, reflected the greatest credit on the engineers and staff of the company.

The Indian Coastal Shipping Bill.

An attack had recently been made on English shipping in the Indian Legislature, where a Bill had been introduced which proposed to prohibit the trading of ships on the coasts of India and Burma, unless such ships were owned by Indians. Such a measure would be an act of confiscation, foreign to the principles of nations, and a blow to Imperial trade. It would no doubt lead to similar expropriation of other British commercial enterprises of immense value to India, and thousands of millions of British capital would go by the board. It would be monstrous if the British community in India were to be debarred from trading there, and it would, he ventured to say, not be for the good of the millions of Indians to whom they gave employment. The European commercial community had never asked for preference for British interests. Indians were free to establish themselves in Great Britain, and an Indian steamship company, the directors of which were the instigators of the Bill for the exclusion of British ships from India, had, within the last few months, registered themselves as a company in this country.

Australian Commonwealth Line.

Thanks, his Lordship continued, to the wise decision of Mr. Bruce, the Prime Minister of Australia, the Commonwealth Line had been sold to their friends the White Star Line. The P. and O. made no offer for it, having, they considered, quite enough on their hands at present in the Australian trade. Mr. Hughes's venture as a shipowner had cost Australia something like twelve millions sterling. Australia would have done better if she had followed the example of Great Britain and got rid of her state-owned ships and ex-enemy ships at the end of the War. With all respect, he ventured to say that Government officials, with the taxpayer behind them to bear the inevitable losses, never made good traders, and probably no one now realised this more than Mr. Hughes. There he would leave it.

Australian Waterside Strike.

The trade and shipping of Australia had, during September and October, suffered serious loss through the refusal of the waterside workers to accept the terms of the order of the Court known as the Beeby award, which laid it down that the workers might be engaged for half a day in the morning, or at noon, a not unreasonable provision, as a vessel might finish her discharge or loading before noon and require no more labour. The Waterside Workers' Union first called a strike, and later ordered the men to resume work and accept the award, which the men then refused to do. Volunteer labour enrolled to meet the emergency suffered intimidation and assault at the hands of the strikers. A threatened general strike in support of the waterside workers failed, and, after six weeks, work was resumed, volunteers as well as union men being eligible for employment. Mr. Bruce and his Government had acted with determination, laying it down that the law must be obeyed and that the country would not tolerate mob rule.

An instance of the strike's damage to trade was afforded by the s.s. "Moldavia," which left London on October 18 with only 3,000 tons of cargo and 5,830 tons of unfilled space; it was, he said, a safe assumption that the waterside trouble had deprived the "Moldavia" of 3,000 tons of cargo, representing freight amounting to nearly £12,000, and the example could be multiplied.

Australian Mails not Interrupted.

One of the most serious aspects of the strike was the difficulty of maintaining the regular shipment and discharge of mails at the Australian ports. The board owed it to the devotion of their officers and crews, in the face of sullen hostility and the imminent threat of violent action by the strikers, that the mail contract service was, in every case, punctually performed. They, the stockholders,

would share the board's satisfaction at the terms of a letter from the Postmaster-General, which he would read to them:—

"General Post Office,
"London, E.C.1,
"December 6, 1928.

"The Secretary, Peninsular and Oriental Steam Navigation Co.
"Sir,—I am directed by the Postmaster-General to ask that you will be so good as to convey to the directors of the Peninsular and Oriental Steam Navigation Company his appreciation of the special services rendered by the company in discharging and loading the mails in Australian ports during the recent labour disputes, sometimes, he understands, at the personal risk of officers and crews. It was clearly owing to the company's initiative that the mail service was maintained without interruption.

"I am, Sir, your obedient servant,
"(Signed) A. R. KIDNER."

The Strike's Wider Issues.

The recent policy of the Australian Waterside Workers, his Lordship continued, was a revolt against law and order, an attempt to levy blackmail on the trade and industry of their fellow-citizens; to raise an unofficial tariff barrier against both imports and exports. It would, if continued, have damaged Australia's credit abroad and have raised the price of money needed for her development. Australia had immense undeveloped areas; and anything calculated to retard immigration could not be for her good. The cost of primary production, inflated by labour disputes and waterside stoppages, was bound to reflect adversely upon Australia as an exporting country. He referred to the matter as much in the interests of British shipping as in those of a young Dominion faced with difficulties, not from any outside hostile source, but from a section of her own people. It was fortunate for Australia that Mr. Bruce had been returned to power, determined to carry on under the time-honoured slogan "Advance Australia."

The Seamen's Union. The National Maritime Board.

After referring to the immense influence for good of Mr. Havelock Wilson, whose wise administration as President of the National Union of Seamen had avoided loss by the men of a single day's pay during many unrestful years, besides instituting for the men and their families varied measures of relief, Lord Inchcape spoke of the beneficial work of the National Maritime Board, set up in 1919, under which the men's delegates and the shipowners, at repeated conferences in London, Liverpool, and other British ports, had accomplished an entire avoidance of serious stoppages during many years, a result which spoke well for the harmony existing between shipowners and their men.

The Fall in Railway Traffic.

Continuing, the speaker said that, in contributing to the recent agreement under which, in view of the heavily falling traffic receipts, the railway companies' servants, from the highest to the lowest, had accepted an all-round $2\frac{1}{2}$ per cent. reduction of wages, Mr. J. H. Thomas has shown far-seeing statesmanship, facing stern economic facts and realising that he was doing his best for the men in obtaining their approval of this necessary measure of relief.

Prospects of a Trade Revival.

So far as we could see at the present time there was, his Lordship continued, still a surplus of tonnage in the world, and tramp owners were rightly holding their hands. Prices of ships were still far above the pre-War level, and from these causes the past year had shown a considerable decline in the output of new tonnage. Better conditions would prevail and, he believed, the trade of the country would revive, especially as the Government appeared determined to pursue a policy of economy in public expenditure and to ease the burdens on industry. He welcomed Mr. Baldwin's declaration that if his party were returned to power, as he sincerely hoped it would be, his policy would not be protectionist. Great Britain, for her general prosperity, needed a free interchange of goods with the whole world.

Nationalisation of Industry.—Its Dangers.

From a resolution moved recently in the House of Commons, "that legislative effort should be directed to the gradual supersession of the capitalist system," in favour of which the whole Labour Party present voted, they might know what to expect if the Labour Party came into power. In his observation of the complex industry, trade, and transport of these islands, he was led to wonder what would happen to the people and the country if our industries were nationalised. Under our constitution and our King anyone, "from duke's son to cook's son," could rise to any position. He felt sure that no revolution, such as recently took place in Russia, could ever occur here. We should continue throughout the Empire, and for all time, to sing "God Save the King."

The Late Mr. Allan Hughes.

The stockholders, he continued, would have observed a reference in the directors' report to the death of Mr. Allan Hughes, late Chairman of the New Zealand and Federal Companies. An elaborate agreement for the acquisition of those companies by the P. and O. was drawn up, sanctioned by the Board, and duly signed, but his prediction to Mr. Hughes that the document would be pigeon-holed, and that neither of them would see it again, had been fulfilled. The board and Mr. Hughes had worked hand-in-glove from the moment the combine was made. A more able, loyal, upright, or congenial colleague to work with he had never met.

Mr. C. J. Cowan.

In Mr. C. J. Cowan, who, with the approval of the P. and O. board, had succeeded to the chairmanship of the New Zealand and Federal Companies, Mr. Hughes had had a coadjutor who was a most capable business man; and, knowing him as he had done for many years, he, the speaker, felt confident that the relations which had existed between Mr. Hughes and the P. and O. board would continue, and that the New Zealand and Federal Companies would be safe in Mr. Cowan's hands.

The Staff.

It was, he said, again his pleasing duty to express the board's appreciation of the loyalty and devotion of the company's staff afloat and ashore, and of its agents all the world over. A more agreeable crowd to work with it would be impossible to imagine. Commanders, officers, engineers, doctors, and pursers were, all the time, in good weather or bad, out to look after the comfort of passengers. They kept their ships in all respects seaworthy, clean and tidy, above and below, like yachts. He was sure the stockholders would join him in expressing grateful thanks to them all. (Applause.)

The Chairman concluded by moving the adoption of the report and statement of accounts, which was seconded by the Hon. Alexander Shaw (deputy-chairman) and was carried unanimously.

The payment of dividends as recommended was unanimously approved; the auditors were reappointed, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

STEAUA ROMANA (BRITISH).

Progress of the Roumanian Company.

Sir Albert Stern's Speech.

The annual general meeting of Steaua Romana (British), Ltd., was held on December 17 at Winchester House, Old Broad Street, E.C. Sir Albert G. Stern, K.B.E., C.M.G., who presided, said:—Gentlemen,—I regret to say that your chairman, Lord Greenway, is unable to be present to-day, and he has therefore asked me to take the chair. I will ask the secretary to read the notice convening the meeting and the report of the auditors.

The Secretary (Mr. W. G. Sole) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—At our meeting last year I referred to the causes of the low earning power of the Steaua Romana Company. Some of these causes still remain with us, the most serious being the low world selling prices of oil products prevailing during the year under review which prevented the Roumanian company from paying a dividend for the year 1927.

The production of the Steaua Romana Company from July 1, 1927, to June 30, 1928, was 578,964 tons, as compared with 483,580 tons in the previous year, an increase of nearly 20 per cent. For the five months ended November 30 last, the production was 300,273 tons, as compared with 243,989 tons during the corresponding five months of last year, an increase of 23 per cent. The total quantity of products exported during the year ended June 30, 1928, was 458,327 tons, an increase of 122,849 tons, or 36 per cent., on the previous year.

The Steaua Romana is to-day drilling at the rate of 4,000 to 5,000 metres per month, and producing between 60,000 and 70,000 tons of crude oil per month, as against the corresponding average figures of approximately 2,900 metres and 45,000 tons per month for 1927, at a considerably reduced cost per metre drilled and ton of production raised. Our experts are of opinion that this rate of progress will be continued during the year 1929 until such time as the Steaua Romana's production has been raised to 80,000 to 90,000 tons per month—i.e., the present crude oil capacity of the refineries.

With the more intensive exploitation of its existing fields, the Steaua Romana has, in continuation of its sound policy of adding to its reserves of oil-producing territory, commenced exploration wells in three hitherto undeveloped areas. The steady progress that has been made since we and our Franco-Roumanian partners acquired an interest in the Steaua Romana will be appreciated when I point out that in 1921 the average monthly production was 18,786 tons, whilst this year the average is 53,596 tons, and for the last two months the average has been 64,000 tons. Incidentally, the Steaua Romana has the largest monthly production of any oil company in Roumania.

Production of oil in Roumania for the first ten months of this year was 3,466,470, as compared with 3,034,903 tons for the corresponding period of last year, and by the end of this month the 4,000,000 tons mark will have been passed. The total tonnage of petroleum products exported from Roumania during the same period was 1,933,247 tons, as compared with 1,576,001 tons.

As you all know, the success of your company is intimately bound up with the prosperity of Roumania. For the past 18 months the rate of exchange has been steady, and we confidently look forward to the flotation of a stabilisation and railway loan, negotiations for which have been proceeding for some time past. The economic development of Roumania has undoubtedly been delayed of recent years by lack of capital, but the successful flotation of the stabilisation loan should herald a new era of prosperity.

Reference to our accounts will show that on June 30, 1928, we held 241,758 shares in the Steaua Romana Company, costing

£1,124,850 10s. 2d. From this holding, for the reasons to which I have already referred, we have received no dividend for the past year.

Our trading profits for the year have again been increased from £26,147 10s. 10d. last year to £31,929 12s. 3d., equal to over 22 per cent. increase. The profit for the year, before making provision for taxation, is £95,801 11s. 5d. After deducting the approximate liability for income-tax there remains a balance of £74,831 11s. 5d., which, added to the balance of £22,180 12s. 1d. brought forward from last year, and an item of deferred interest amounting to £424 12s. 3d., makes a total of £97,436 15s. 9d.

Subject to your approval, we again propose paying a dividend on the Ordinary shares at the rate of 4 per cent. per annum, less tax, amounting to £64,000, placing to income-tax reserve the sum of £8,436, and carrying forward a balance of £24,980 15s. 9d.

The fact that, in spite of receiving no dividend from our investment in the Roumanian Company, we are in a position to be able to pay a dividend of 4 per cent. affords a remarkable proof of the company's inherent strength. With the largely increasing production and the lower production costs to which I have referred, it is anticipated that it will not be long before the Roumanian Company will be in a position to resume the payment of dividends, and if present anticipations of a favourable movement in the world's prices are realised, the outlook will be still more favourable. Summed up, the prospects are that, even without dividends from the Roumanian Company, we shall be able to maintain our present dividend of 4 per cent. per annum, and that, with a resumption of payment of dividends by the Roumanian Company, we shall be able materially to increase our own dividend. This position is, I think, gentlemen, one on which we have every reason to congratulate ourselves.

ANGLO-BELGIAN COMPANY OF EGYPT.

The twenty-third ordinary general meeting of the Anglo-Belgian Company of Egypt, Ltd., was held on December 18.

The Chairman, Mr. Francis Fitzgerald, C.B.E., who presided, said that the year's operations resulted in a profit of £2,537 11s. 10d., which, together with the balance brought forward from last year of £3,741 14s. 10d., gave a total of £6,279 6s. 8d. This profit the directors proposed should be utilised for the payment of a small dividend on the shares of the company, and recommended the payment of 1s. per share, less income tax, absorbing £3,456 18s., leaving £2,822 8s. 8d. to be carried forward to the credit of the profit and loss account. The Chairman referred to the manner in which the payment of the dividend had been distributed over the coupons attached to the share warrants to bearer, and added that the quotation of the company's shares on the Official List of the Brussels Bourse, "ex coupon 6," in spite of the protests of the company, was causing uncertainty amongst purchasers of shares on the basis of that quotation and had led the Board to take legal advice both in England and in Belgium as to the best course to be followed for the purpose of regularising the situation with due regard to acquired legal rights. The decision of the Board was in conformity with the best legal opinion in law and practice in England and in Belgium regarding coupons.

Proceeding to deal with the holdings of the company, the Chairman regretted that the results of 1927 were again unsatisfactory owing to the unfavourable results of the Fayoum Light Railway Company. The increased road competition, affecting both passenger and goods traffic, was a principal factor in the reduced accounts. The absence of proper regulations made it possible for every car to be used as a public conveyance; very low fares could be charged because the car was generally filled to its capacity. In spite of representations to the Egyptian Government on the subject, nothing had yet been done to remedy a state of things that was unfair and unjust to railway companies operating in the Egyptian Provinces, who were obliged, under the terms of their concessions, to maintain services under strict regulations and onerous conditions. It would be learnt with satisfaction that His Excellency Sidky Pasha had accepted a seat on the Board of the Railway Company.

Sales had taken place during the year of various plots of land at profitable prices, but the company's most valuable property, the ex-French Institute, remained unsold, offers received being unacceptable. With regard to this property, the policy of the Board had been frankly and clearly stated at a meeting held in February last year between directors of the company and Egyptian shareholders and had received their approval.

The Chairman referred to the political situation existing in Egypt and its effect on the financial and commercial situation, and stated that without the confidence that proceeded from the security of the Government the free and active employment of capital and the development of resources must necessarily be hindered. In his opinion, to the political situation must be attributed the hesitation of purchasers to come forward to acquire a property unique in its character as regards area and situation and of special adaptability for important usage.

The resolution for the adoption of the accounts and the balance-sheet was carried unanimously and MM. F. Casimir-Lambert and Henri J. Naus Bey, C.B.E., were re-elected directors of the company.

The Greek Government is reported to have abandoned the proposed examination of the existence of oil deposits in Epirus.

CYPRUS TRADE PROGRESS.

The report on Cyprus trade in October states that this has proved so far the best month of the year. Substantial increases in the value of both imports and exports are recorded. The quinquennial averages were exceeded by £32,700 and £29,650 respectively. Shipping remained constant.

The value of the imports was £182,669, and it is noteworthy that there was a general increase, cotton and woolen goods, showing the greatest individual rise. In the exports, amounting to £162,917, the values of asbestos, pyrites, and grapes were more than double the quinquennial averages; carobs and general fruit also showed improvement, and barley shipments have begun.

Compared with the ten months ended on October 31, 1927, there is, in the corresponding period of 1928, an increase of nearly £200,000 in imports. On the other hand, a decrease of £50,000 in exports is not disquieting having regard to the holding up of grain shipments and to the excellence of the 1927 harvest.

CYPRUS CROPS.

The report on Cyprus crops for November states:—

Wheat.—Rain has fallen and sowing is now in full progress. There is a very good demand for wheat for seed purposes, and the stock of good quality seed is hardly sufficient to meet it. There is a slight rise in the price of seed wheat—9s. to 10s per bushel. Imports of flour from Australia keep the local price of wheat low.

Barley.—Most of the fields are sown and have benefited from the first rains. The price is still firm at 3s. 4d. per bushel. Offers are poor but there is a good demand.

Potatoes.—The new crop has just appeared on the market, and the prospects are very promising. Shipments to Egypt and Greece have already started. The prices range from £6 15s. to £7 5s. per ton.

Carobs.—The harvest is stored, and no exports have so far been recorded. The price is quoted at 26s. per Aleppo kantar (4½ cwt.).

Cotton.—The final results of picking are not so satisfactory as last year's crop. Prices are 8d. to 9d. per ok.

Oranges.—The new season crop is now available. There are no quotations for export.

Onions are £6 per ton firm, with a good demand and a good supply; 175 tons were exported between October 16 and November 10.

Pomegranates.—There is a good demand for the Egyptian market and the price offered is £6 10s. per ton.

The Yugoslav State Railways are to invite tenders for the supply of 500 passenger cars and 1,500 trucks, as also for 500 locomotives.

The Roumanian Government has suspended a number of export duties, including those on live stock and on timber.

The Rohilkund and Kumaon Railway Company recommends a final dividend for the year ended September 30, 1928, of 6 per cent., together with a bonus of 5 per cent. on the Ordinary stock, making 18 per cent. per annum. The dividend and bonus will be paid, less tax at 2s. 3d. in the £, on January 18.

A general meeting of holders of the Turkish Unified Debt was held at Winchester House, Old Broad Street, E.C.2, yesterday, to receive a report with regard to the arrangement of the External Debt ratified by the Turkish Grand National Assembly on December 1.

The commercial treaty between Yugoslavia and Italy which was concluded some time ago and has just been submitted to the Italian Parliament, will, it is hoped, come into force early next year. It is based on most-favoured-nation treatment and provides for decontrol of trade and navigation between the two countries, no embargoes on exports, imports, or transit trade being permissible.

Roumania's Customs receipts for the first ten months of the current fiscal year amounted to 5,964,000,000 lei, as compared with 7,933,000,000 lei for the same period of the previous year. Of the above total, 616,000,000 lei represent receipts in respect of exports and 5,258,000,000 lei in imports. The receipts for exports for the first ten months of the current year are 1,400,000,000 lei less than in the same period of the previous year.

The preparation of the advance catalogue of the London Section of the British Industries Fair has been completed at the Department of Overseas Trade. Ten thousand copies will be ready for dispatch, to overseas buyers, on New Year's Day, seven weeks before the opening of the Fair. The catalogue contains particulars of the exhibits of 1,250 firms, with classified index of goods in nine languages, and is believed to be the largest produced in connexion with any trade fair so far in advance of the opening.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 12:—

Egyptian Futures.

Sakel Contract.—Some active trading has taken place in this market during the past week; in the earlier stages values were inclined to ease, the general tendency being for the speculative long interest to reduce their holding prior to Saturday's report. Later dealings, however, revealed a consistent demand for contracts, one local house in particular taking a lot of cotton out of the market, presumably covering a large spot transaction. The net result was that on the reopening of our market on Saturday afternoon values were practically unchanged from the level ruling at the time of our last circular. The sharp break in the American departments just after the publication of the Bureau report and on Monday was more than reflected in this contract; heavy liquidation from Continental sources began to come in, and stop-loss orders were uncovered, so that in spite of further support from spot sources prices quickly reacted about $\frac{3}{4}$ d. per lb. At this point Alexandria commenced to show signs of recovery, and since a strong "bullish" movement has been in progress at the other side. Ginning figures to the end of November are returned as 1,341,208 kantars; apparently this is construed by the majority as an indication that the yield is going to fall short of earlier estimates. We hardly agree with this view; even presuming the crop only reaches the Government figure, it appears probable that supplies of fine cottons from Egypt and the Sudan will later on prove ample to meet all requirements.

Business in the fine section of the trade continues to be unsatisfactory, and spinners, with prices at their present level, have to contend with quite unworkable margins. There is no doubt that Sakels, as far as the home consumer is concerned, have been forced beyond their economic value, and the result of this will be evident in a marked falling off in the consumption during the next few months. In the meantime, more and more Egyptian mills are turning over to Uppers and outside varieties; the minority, still persisting with their customary qualities, are keeping their commitments as close as possible and are anxiously awaiting the marketing of the coming Sudan crop.

Strong interests appear to be behind the market in Alexandria, and prices may easily be manipulated to still higher levels in the immediate future. The absence of trade backing, however, has been disregarded for some little time now, and unless there is a revival of activity in this quarter, and we must admit we cannot foresee this eventuating for reasons stated previously, we consider that conservative operations on the "short side" on any further appreciation are to be recommended.

Upper Contract.—Whilst fairly wide fluctuations have been experienced in this market during the week, trading throughout has been of a light character. Price movements have approximated fairly closely to the ruling American values, and practically no change in the straddle differences is to be noted. Spinners' activities have been rather curtailed owing to the unsettled market conditions. In comparison to other cottons this contract appears fair value and purchases on easy markets should later on be realisable at a moderate profit.

Egyptian Spot.

This week has been chiefly remarkable for the advent of another U.S. Bureau report, which produced a temporary shock for all markets. Except for a short period immediately following the report business has continued much as usual. The market was very steady just before it was published, and a certain amount of trade support was noticeable on the decline. On the strong tone which has since developed, both here and in America, spinners are showing some inclination to acquire more cotton. The Sakel offtake has shown no improvement, so far as spot cotton is concerned, and a very large proportion of the daily inquiry has again been for cotton at from "200 off" and below.

Owing to the strong competition which is now being experienced from staple American cotton, Tanguis, etc., the demand for Uppers has been somewhat quieter recently, and stocks have been steadily mounting up, but a fairly steady trade has continued in the "25 off to 25 on" quality, and there has been for once an improved inquiry for the top grades. The demand for Pilon cotton has been maintained, but here again is to be found the general tendency of the trade to-day. We refer to a partial neglect of the better qualities in favour of the lower, and of course cheaper, lines. Nahda cotton and the other "fancy" growths have been neglected this week.

In spite of discouraging reports from up-country, spinners' takings have recently been on a much improved scale. Last week's figures, for instance, were 11,104 bales Egyptian and 808 bales Sudan. It is obvious that the purchase of forward delivery cotton has been taking place on a larger scale than had been generally thought. Interest in Sudan Sakel has recently shown distinct signs of revival, and some useful lines have again been placed. On the other hand, Tokar Sakel has been very difficult to move. Estimated spot sales, 1,300 bales Egyptian and 1,250 bales Sudan. Quotation of Sakel show a net advance of 20 points on the week. Others unchanged. F.G.F. Sakel to-day, 19.50d. F.G.F. Upper to-day, 12.45d. F.G.F. Pilon to-day, 13.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 6, state:—

Since our last report the futures market has been less active, with a decidedly weaker tendency. The week's summary of price movements is as follows:—Sakellaridis: January, 37.44 dollars, 0.99 dollars down; March, 37.87 dollars, 0.92 dollars down; May, 38.15 dollars, 1.05 dollars down; November, 38.18 dollars, 1.15 dollars down. Ashmouni: December, 22.65 dollars, 0.59 dollars down; February, 23.17 dollars, 0.58 dollars down; April, 23.57 dollars, 0.71 dollars down; June, 23.97 dollars; October, 24.45 dollars, 0.62 dollars down.

Sakel.—As we anticipated in our last report, the movement by which January was pushed up to about 39 dollars having no real commercial basis, could not be sustained, and, with the cessation of speculative purchases, prices began to fall away, the decline gathering momentum with the growing discouragement of the longs and the throwing over of their positions and culminating in the return of January to the neighbourhood of 37 dollars. During all these fluctuations spinners maintained a more or less indifferent attitude, and both last week and this the demand from this source has been very moderate. The latest reports from the consuming centres moreover do not encourage the expectation of much change in conditions until after the holidays.

The Government's estimate of the Sakel crop, published on the 3rd inst., was 2,340,000 kantars, and this does not look to be very far wrong, the majority of the commercial houses putting the figure at about 2,500,000 kantars. On the other hand, the Government estimate of the total crop is 7,195,000 kantars, against a production generally estimated at from $7\frac{1}{2}$ to $7\frac{3}{4}$ million kantars.

While spinners maintain their present attitude of not entering the market, we cannot look for any advance from present levels, and it is even probable that, with their continued abstention, the recent reaction may be carried somewhat further.

The Sakel/Uppers straddle (January/February) this week stands at 1,427 points, against 1,468 points last week and 765 points at this time last year.

Uppers.—The Uppers market has not yet shaken off the heaviness to which we alluded in last week's report; and prices have receded a further half-dollar or more for no particular reason. There has been some falling off in the arrivals from Upper Egypt, with a resulting decrease in hedge selling against spot cotton. Trade demand has weakened somewhat, but still remains much better than the demand for Sakel.

Falling a serious setback in American, a probability which does not seem at all likely, we consider Upper very cheap at its present level, and have little doubt that, sooner or later, we shall see an appreciable improvement in prices.

The Ashmouni/American straddle (December/January) this week stands at 231 points, against 255 points last week and 647 points at this time last year.

The week's receipts amount to 340,622 kantars, against exports 261,468 kantars; the stock in Alexandria stands at 3,306,470 kantars.

Spot.—During the past week there has been a marked falling away in the demand from abroad, with a corresponding diminution of activity at Minet el Bassal, and the turnover for the week is greatly reduced. Sales amount to about 23,400 bales, of which we estimate 7,900 bales Sakellaridis, 13,300 bales Ashmouni and Zagora, 1,500 bales Pilion, 500 bales Nahda, and 200 bales other varieties.

Sakellaridis: Only a moderate business has been done, in which all grades have shared. Extra cotton continues to bring very good premiums. Spot differences are generally unchanged.

Ashmouni and Zagora: The demand has fallen away still further, and only a moderate turnover has resulted, covering all grades. Spot differences are without change.

Pilion: Has met with a fairly good demand at last week's spot differences. All styles have been dealt in.

Other Varieties: Nahda continues in great favour with buyers, and a good business has been done. Spot differences are unchanged. A retail business has transpired in White. Spot differences have eased except for Fully Good, which maintains its parity. A small business has taken place in Maarad and Fouadi.

Up-country: The crop movement is falling off gradually, due both to the prices demanded by holders of cotton and to the shortage of warehousing facilities which is beginning to make itself felt in Alexandria owing to the heavy accumulation of stocks. On the 5th inst. the Government published the following *communiqué*: "The Minister of Agriculture informs growers that the law reducing the acreage to be planted under cotton to one-third of the total was enacted for three years, to expire in 1929, and that the Ministry has no intention of repealing this law, which will remain in force despite rumours circulated to the contrary." Nevertheless, since the new Ministry took office, it has been noted that the application of the law has been somewhat less rigid, and it is probable that much the same attitude will obtain next year.

The Eastern Telegraph Company, Ltd., announce the payment on January 15 next of a dividend at the rate of $3\frac{1}{2}$ per cent. per annum, less income tax, on the Preference stock of the company for the quarter ending December 31, 1928, and a dividend of $2\frac{1}{2}$ per cent. on the Ordinary stock, free of income tax, for the quarter ended September 30, 1928. The transfer books of the Ordinary stock will be closed from January 1 to 8, 1929, both days inclusive.

Notes of the Week.

Middle East Supplement.

With this issue of THE NEAR EAST AND INDIA is included a Supplement dealing with countries of the Middle East—Egypt, the Sudan, Palestine, Syria and Iraq. The Egyptian season is too familiar an institution to the travelling public to call for any special mention, and most people who are able to go as far as Egypt contrive to include Palestine in their itinerary. Within the compass of a few pages, therefore, there is no need to go over familiar ground, and in regard to these two countries the Supplement serves to call attention to the era of development on which the former is launched and to the steady progress which the latter, with its handicaps and more restricted opportunities, is making. Development in Egypt entails not only continued concentration on Nile irrigation works, as exemplified in the Nag Hammadi Barrage now under construction, but also town-planning schemes to enable the chief towns to keep pace with modern requirements. An article on agriculture shows that in the midst of all these material developments the groundwork of the country's prosperity remains unchanged. The Sudan, as well as Syria and Iraq, is apt to be regarded as off the beaten track. It is a mistake, however, to suppose that this second country of the Nile duplicates Egypt or has not attractions and interests of its own. There are many ways of reaching Iraq. Until 1922 only the adventurous thought of varying the long sea-route via Bombay, Karachi and Basrah. The Royal Air Force came first to the help of those determined to get there by quicker means; two years later the motor service across the desert proved that it was not such an adventure, after all, to go to Baghdad. In this issue we show how the journey can be accomplished, for all but two hundred miles, by train as comfortably as any other railway journey outside the favoured run to the Riviera. Arrived in Iraq, the traveller, as he or she may learn from another article "Between Desert and Sown," has abundant material for an extensive and absorbing programme. Last, and not least, there are the claims of Syria, which, behind the troubles of a mandated sphere, can boast of a country wonderfully varied in character and appeal, where again the contrast between the old and the new is strikingly illustrated.

The Yugoslav Crisis.

Although the Serbian Democrats, when in a Coalition Government with the Radical Party, make a practice of preaching revolt and as often abandon for a period their criticism of their colleagues in return for some concession in the way of an extra portfolio or further official posts for their followers, on the present occasion they are credited with the intention to push their opposition to extremes. Any other Prime Minister than Dr. Koroshetz, it would be imagined, would long ago have resigned or dismissed his Democrat colleagues from the Cabinet; but in this matter as in many others during his tenure of the Premiership he does not appear to have been a free agent. What is expected to prove the fateful decision of the Democrat Club is to be taken while these pages are being printed. The defection of the Davidovitch Democrats should materially help towards bringing the Yugoslav crisis to a head. Even if not much attention is paid to the speech made at the railway station on his departure from Zagreb by General Uzun-Mirkovitch, who declared his intention of forming a Party of Right, Freedom and Unity, it is evident that the prolonged stalemate in Yugoslav affairs is increasing dissatisfaction among Serbs themselves with the policy of the Radical Party. When once the Croats realize that the constitutional changes which they require must be secured by constitutional means, they will appreciate the necessity of keeping in touch with other political parties, so that in a new Parliament, in which they will be represented, a new Constitution can be voted which will give the various divisions of the country the autonomy under the Yugoslav Crown that seems essential in the interests of the Kingdom. In this connexion a perusal of the article in this issue which deals with provincial differences in Yugoslavia may be commended.

The Italian Visit to Angora.

The visit paid last week by Signor Grandi, Italian Under-Secretary for Foreign Affairs, to the Turkish President is ostensibly only a mission of courtesy to return the visit paid last April by the Turkish Minister for Foreign Affairs to Signor Mussolini in Milan. It would, however, be contrary to the practical spirit of Signor Mussolini's policy that such an opportunity should be wasted on

trivialities. Both the Italian and the Turkish Governments affect to regard the Treaty of Friendship that binds them as an instrument of great potentiality; but so far it has little more to its credit than the eulogistic words with which it was launched. The desire of Italy at the time to have a tripartite agreement in which Greece would be a partner came to nothing in view of the opposition of both Turkey and Greece. Since then, in spite of an exchange of friendly sentiments between the Greek and Turkish Prime Ministers, the relations between the two countries have experienced a set-back as a result of the protracted failure to arrive at an agreement over the exchange of populations. At the same time Turkey will have disappointed the Italian Government by the refusal, couched in rather unflattering terms, to recognize Italy's protégé, King Zogu of Albania. Signor Grandi, therefore, will have at least two delicate questions to raise at Angora, and the measure of his success with them will be an indication of the practical value of the Italo-Turkish Treaty. That the Turkish Government is not altogether happy under Italy's eye in regard to its relations with Greece is suggested by the sudden change of note in the references of the Turkish Press to Greece. The bickerings of the representatives of the two countries on the Mixed Commission for the settlement of the exchange-of-population question and the unrestricted venom of the Press on both sides have effectually prevented any solution of the problem from being found. It is to be hoped, however, that the mediation of the Italian Government in the person of Signor Grandi will lead to the desired end.

France and Syria.

The return of M. Henri Ponsot, High Commissioner for Syria, should put an early end to the suspense in which the people of the French mandated territory now stand in regard to their political future. The Constituent Assembly, it will be remembered, was prorogued until next February, in order that M. Ponsot might find in France a way out of the difficulty which has arisen from the Assembly's drawing up a Constitution which impinged upon France's rights and obligations as Mandatary. Presumably the High Commissioner will be returning to Beyrout with a new scheme for the political ordering of Syria. It is to be noted, incidentally, that the campaign for having a monarchy in Syria was continued in France even during the High Commissioner's visit; but that particular "solution" of the political difficulties would appear to be rather a forlorn hope. There is, however, no certainty of the future line of political development in Syria, if only because the people therein speak with no united voice. In France there is no longer a

disposition to treat Syria as a colony; it remains with the Syrian peoples, therefore, to consider among themselves whether their aims are not likely to be better realised by the attainment of reasonable unity rather than by the continual emphasising of racial or religious differences. What change, if any, has come over the minds of the members of the Constituent Assembly since it was suspended, it is impossible to say; but in the interests of peace and stability it is to be hoped that they have listened to the promptings of reason and have been persuaded of the sincerity of M. Henri Ponsot, whose task is one of the most difficult in the whole Middle East.

INDIAN NOTE.

The European Association.

At the annual meeting of the Calcutta Branch of the European Association, which was held last month, Mr. C. B. Chartres, the President, said that he anticipated the grant of a very large instalment of political autonomy as a result of the investigation which is being made by the Simon Commission. This seems to be the general opinion in India, and if it proves to be correct, then, as Mr. Chartres pointed out, the Europeans in the country will have to see where they stand. They will not count for much when it comes to voting, for in numbers they are few. But they represent great material interests, and they have done, and are doing, an immensely valuable work in the development of the commercial and industrial resources of India. How, being so placed, are they to hold their own in the changed political conditions which a large measure of provincial autonomy will establish? Mr. Chartres looks to more and more efficient organisation; they must, he said, stand together as a community in one organisation throughout the country. He also strongly urged them to support and to encourage those moderate Indians who, although they may now stand aside, nevertheless recognise the value of the British connexion. It is, he went on to say, one of the chief aims of the European Association to support and to help these men so that they may take their rightful place in the administration of the country when Swaraj is an accomplished fact. The attitude of the Europeans towards India's political problems has been often adversely criticised in the past. They have been said to be antagonistic to all Indian aspirations, and to concern themselves solely with their own selfish interests. This criticism never had any solid foundation in fact, and to-day it would be absurd. Far from refusing to recognise Indian aspirations the Association recognises full well, as Mr. Chartres said very plainly, that Great Britain is pledged to grant responsible government to India as an integral part of the British Empire. And not only does the Association accept this position, but it believes that this measure of self-government can be achieved without damage to India's economic development if the advance is not made too rapidly. And, furthermore, the Association looks upon it "as one of the primary duties of Britons resident in India to help such development along sound lines by every means in their power." This explicit declaration is, of course, in line with the Memorandum which the Association submitted to the Statutory Commission, and which we noticed in these columns some weeks ago. With the establishment of provincial autonomy the position of the Europeans in India will no doubt be different from what it has hitherto been. But we do not think that the community will fail to hold its own provided, of course, that legislation discriminating against European trade and industry is not undertaken. For it must be remembered that the British in India know far more about the practical working of democratic institutions than the Indians can possibly know. And if this knowledge is utilised aright, and if the Europeans alike in the mofussil and in the great centres, take their proper place in the political life of the country we do not think that they will be submerged.

THE AFGHAN RISING.

The recent course of events in Afghanistan is inevitably involved in a certain amount of obscurity, but there can be little doubt that the rising has proved more formidable for the King and his Government than was at first appreciated either in Kabul or in foreign countries. The trouble originated with the Shinwaris, who occupy territory on the Indian frontier, and both Jalalabad and Dakka, at distances by road of about one hundred and one hundred and forty miles from Kabul, were threatened. The tribesmen do not seem to have had things their own way for long, and must have been sufficiently punished to make them consent to an armistice in order to meet the authorities in conference. Their grievances are alleged to have been entirely fiscal, arising from the imposition of new taxes and the more than usually efficient methods adopted for collecting them. It is not clear whether this conference had been satisfactorily concluded, or whether it was still in session when trouble broke out near Kabul. Here again the reports are vague. It seemed reasonable to suppose at first that the Shinwari outbreak, having been not altogether unconnected with popular hostility towards King Amanullah's hurried reforms, had acted as an incentive to malcontents in other parts of the country to raise the standard of revolt. A later version represents Kabul as having been momentarily terrorised by "a band of four hundred brigands," who were subsequently attacked and defeated, leaving the capital in a state of normal quiet. Unfortunately for this account, which has the authority of the Afghan Legation in London, there is the contradictory evidence that Kabul is still in precarious communication with the outside world. No direct connexion may exist between the Shinwari outbreak and the situation in Kabul; but it is at least probable that the former was used to further the opposition to King Amanullah's reforming activities by a more conscious agent than is predicated in the movement of raiding brigands. This, however, does not necessarily imply that the King is confronted with a situation with which it is beyond his powers to cope. He has already had to face several insurrections during a short reign, and if trouble had not broken out in Kabul, there would have been little inclination to make much of spasmodic insurrections. The isolation of the foreign Legations caused the Government of India to send an aeroplane to reconnoitre; the machine was fired at and forced to land, fortunately coming down in the Kabul aerodrome. When a second machine appeared the next day, it was warned from the Legation to fly high and not to land. A later message from Sir Francis Humphrys, British Minister in Kabul, was to

the effect that the situation was improving, and it may, indeed, be that those outside the country are regarding the situation more anxiously than those on the spot. The fact that the British Legation is two miles from the centre of the town may in itself be sufficient explanation of the scarcity of news during a period of raiding and street fighting.

Behind the anxiety that is felt abroad over the situation in Afghanistan lies the reputation of that country for turbulence and fanatical outbursts. King Amanullah's reform campaign has been followed with admiration for his courage and determination, but with some doubt as to the wisdom of his methods. It was admittedly a great temptation to emulate the thoroughness and rapidity of the Turkish reform movement; but reflexion might have shown the King that conditions in Afghanistan were very different from those in Turkey. In the first place, he must have realized that the position of Mustapha Kemal Pasha in the Turkish Republic, of which he was founder, was far less exposed to challenge than his own in Afghanistan. Further, in Turkey the President could count upon much wider and more efficient support in the administrative sphere than was available for King Amanullah; and, finally, the Ghazi had an army devoted to his person, which rendered opposition to his will a dangerous indulgence. The Turkish reforms, moreover, were carried through exclusively by Turkish agency. King Amanullah's policy was thrust upon his backward subjects red hot, as it were, from the glow of his Western tour, quite apart from his reliance on foreign instructors. Although he could quote for his reforms the precedent of acceptance by a Muslim State, he had forgotten that his Afghans would insist upon using their own judgment as to what was, or was not, in keeping with the tenets of Islam. He failed to reckon with the fanaticism which has always been a difficulty in Afghanistan, and on which his reforms may yet suffer shipwreck, even if he succeeds in weathering the present storm. It would have been better if the King could have concentrated first on material improvements, particularly in regard to communications, and then have built on these the social developments calculated to accelerate the progress of the country.

From the scanty information that reaches the outside world it is to be feared that King Amanullah has been led away by his own enthusiasm to minimize the opposition that his reforms are calculated to evoke among a conservative and fanatical people. If it be true that he has allowed the pay of the army to be in arrears while education has had the prior claim on the exiguous exchequer, he will have shown how completely he has misunderstood the secret of the success of Mustapha Kemal Pasha, who is a soldier first and a reformer afterwards. It will be unfortunate, if the present challenge to the King's authority should have the effect of retarding the march of progress in Afghanistan. A more gradual programme of reform will do no harm to the cause that the King has at heart; as it will be less liable to create complications with foreign countries. So far the reports suggest that, apart from attacks on caravans regardless of their nationality, the insurgents have recognized that their grievance is against the Afghan Government and not against foreigners. Any serious trouble in Kabul which brought the foreign Legations into grave peril or identified a Turkish military mission, if it should arrive there, with the Sovereign in antagonism to the Army might undo at one stroke all the good that King Amanullah sought to achieve by his tour abroad. It is hoped, therefore, that he will be able to rise superior to the present setback and continue his work of reform in a manner more suited to the mentality of his people.

THE PROVINCIAL PROBLEM IN YUGOSLAVIA.

By J. A. SELBY BIGGE.

The wanderer in a foreign country produces evidence of a different kind from that of the avowed investigator, who, after interviewing officials and collecting data, issues a statement of facts. Yet sometimes the wanderer by assimilating impressions of a general nature can lend perspective to the array of facts set up by the investigator.

As a mere wanderer, I jolted on my leisurely way through the provinces of Croatia, Dalmatia, Bosnia, Herzegovina and Montenegro in the late summer of this year. As our two-seater car usually carried from two to five wayfarers, I can at least claim to have been in close contact with the natives. Moreover, the hospitality of our passengers ensured a proper assimilation of the country, though it sometimes retarded our rate of progress to about 1-5 inns per hour.

The dominant impression of this visit was one of the dissimilarity of these provinces and of certain contrasting—I might say conflicting—characteristics in the provincials. An understanding of these points of difference is, I believe, essential to a proper appreciation both of the seriousness and of the complexity of the present situation in Yugoslavia. While the Serbs are determined to enforce the enjoyment of their conjugal rights, the Croats are filing a petition for divorce, and other members of the family are suffering from domestic infelicity. At the heart of the problem lies the old plea of incompatibility of temperament.

The Serbs are, undoubtedly, a fine and courageous race; furthermore, I feel that they are by nature a ruling race. Unfortunately their conception of ruling is based on the Balkan traditions of the last century—a system of jobbery supported by gendarmerie. In this article, however, I propose to deal only with the Serbs from the point of view of the provincials, leaving it to another to deal with the provincials from the point of view of the Serbs.

To generalise broadly, there was throughout all these provinces a strong feeling of discontent against the governing clique of Serbs, based on a mistrust of the centralised system that concentrates all the power in the hands of this clique, who exploit it for the benefit of themselves and their fellow-Serbs. In every province and even among some Serbs I heard the Beogradski spoken of with contempt.

In all these provinces, with the exception of Bosnia, I was struck by the ubiquity of the gendarmerie, mainly

composed, I believe, of Serbs. They seemed highly efficient and well organised, but I could not help feeling that their activity was often of a distinctly repressive character. I have a suspicion that the Serbs are particularly proud of their gendarmerie system, and consider this to be the normal means of administering—or controlling a province.

The Army was much in evidence, and I believe most of the troops in these districts are Serbian regiments. They impressed me at once as being remarkably efficient and well disciplined, while the string of garrison towns along the hinterland of the coast were humming with military activity. From many small incidents I gathered the impression that the troops were not merely a corps of defence, but represented to the provincials a demonstration of the power of the central Government. One wonders whether home politics also have been a factor in determining the immense military Budget of the country.

Turning now to the specific situation in the different provinces, I will outline a few of the salient features that impressed me.

In Bosnia I was surprised at the extent to which the Muslim Bosniaks had remained "Turkified," in character as well as in custom. As a result they are even now despised by their Christian neighbours for having changed their faith in the distant past. Certainly, after watching a colossal Muslim festival in Sarajevo, I felt that these people stood isolated. The Christian Bosniaks described themselves as Serbs: but as the name is used locally as a term of religious distinction, it was difficult to assess the true degree of affinity. Christian and Muslim, however, combined in decrying the neglect of their welfare by the Government. Certainly most of the villages, particularly those of the Muslims, seemed poor and squalid, although the surrounding land was comparatively rich and the population sparse. Many of the peasants informed me that that most of the good land was still in the hands of the Beys and big landowners, and that little or no land had been distributed under the Agrarian Reform. I myself saw an unmistakable old Bey driving about in his barouche to inspect his herds in true Turkish style. Also I remarked that many of the villagers had all the appearance of miserable tchafliks and the villagers of serfs without hope.

The Herzegovinians I should class with the Montenegrins rather than with their historical associates, the Bosniaks; indeed, I found the peasants anxious to assure me that they were just the same as the Tsernagortsi. None the less they are looked down on by the latter as having been a subject race, and are penalised by the Serbian Administration for having served in the Austrian army; at the same time they have no affinity with the Croats and little with the Dalmatians. The peasants were loud in their complaints against the Government, the gendarmerie and the troops. The Government, they affirmed, either refused to grant them land or else offered them "desirable plots" on the barren mountain-tops at highly undesirable prices. As regards the troops, two of my passengers nearly had a battle with a patrol, who had closed the road for the day. Finally they resorted to guile by pretending that I was a Frenchman, which at least pacified the Serbian sergeant-major.

The Montenegrins are certainly the poorest, probably the proudest and, for some mysterious reason, perhaps the happiest of peoples. Their country is little better than a stone-heap, and this winter famine awaits them. Their present position in the comity of Yugoslavia is complicated. They despise the newly-liberated provinces and retain bitter memories of the cruelties committed by their neighbours when in Austrian uniform. Likewise they are bitter against the Serbs for the trickery by which the independence of their unconquered mountain was filched from them, and for the brutality with which their subsequent revolt was crushed. Moreover, there was a rumour that the Government intended to close down the

CUNARD TO MEDITERRANEAN LEVANT and BLACK SEA PORTS

higher grade schools. Now the Montenegrins regard education as the solution of their economic difficulties, and apparently are quite prepared to shed blood in its cause.

The Government, however, appeared to have granted them certain privileges. I was told that they were exempt from military service. Also, in reward for their prowess in hunting down Albanian brigands, they were to be granted land along the Albanian border, where presumably they would form colonies of frontiersmen. But the Montenegrins complained that the Albanian brigands have only Italian money in their pockets.

Generally speaking, they seemed to be divided in their counsels, some wanting a kingdom, others merely independence, and others again preferring for economic reasons to remain within the union. Their attitude to the Skupshtina may be judged by the reply of a chance acquaintance to whom I tactfully expressed a regret at the murder of Raditch.

"Yes, it was a bad business. Ratchitch! What could he do? You see, the trouble is we have only got two or three deputies; now if we'd six or seven we could have shot up the whole dirty lot!"

The Croats and the Dalmatians I propose to class together, regarding the Italianism of the latter as an obsolete factor. I was deeply impressed by their youthful vitality, intelligence and practical efficiency, not only in the towns, but in the villages as well. The towns were humming with business, and the villages were prosperous and enlightened. Moreover, they seemed to have a certain peculiarity, in that evolution of the town bourgeoisie from the peasant stock takes place by a series of gentle gradations, the essential spirit of the people being preserved intact at each stage. This peculiarity provides a degree of homogeneity that is rare in such countries.

Both peasant and townsman were anxious to impress on me that as Hrvatsi they were an entirely different race from the Serbs; that they belonged to Western civilisation, whereas the Serbs were a Balkan people of Balkan traditions. They made disparaging comparisons between the present régime and the past; the bourgeoisie, because they had been governed by civilised people in a more or less civilised manner, and the peasantry, because "they had lived better" in the old days. Thus the hatred of the bourgeoisie was directed against the Serbs as a whole on racial and cultural grounds, while that of the peasants was more against the Serbian politicians on grounds of class interest.

The importance of the murder of Raditch has been in no way exaggerated. Zagreb and, to a lesser degree, Split and Soudhak, were in a state of seething excitement, though it was of a very cheerful order in spite of the black flags. In the villages there was the same display of black flags and an atmosphere of sullen fury. To the peasant Raditch was the constructive reformer, the founder of the village clubs and the champion of the peasant interest. To the townsman he was the adroit politician who could play skittles with the Serbian politicians.

Though the bourgeoisie and the peasantry were united as Croats, there seemed at that time to be a possibility of the Croat peasants combining with those of other discontented provinces, and even with the peasants of Serbia, to form a political party based purely on the peasant interest. On the analogy of the peasant movement in Roumania and in other States of Eastern Europe, this would seem to be the line of natural evolution, in that the possession of land leads to a greater self-consciousness and to a desire for self-expression.

As against this natural development stands the present disruptive movement in the whole State of Yugoslavia, which is based on a provincial self-assertion against the centralising and dominating force of the Serbs. The galling pressure of this force can probably be relieved by a judicious degree of decentralisation of administration and by making the central organisation common to all.

A united Yugoslavia has the opportunity of an important economic and cultural future, by utilising for the common welfare of the country the varied characteristics of its people as by developing its varied natural resources. Provincial dismemberment can only lead to economic limitation and to cultural stagnation. Meanwhile "Yugoslavia for the Serbs" ultimately spells chaos; and chaos will provide an opportunity for any foreign country with unscrupulous ambitions.

After all, Zagreb is not very far from Sarajevo either in space or in time.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ENGLAND AND EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The recent suppression of the Egyptian Constitution by Mohamed Pasha Mahmoud and the establishment of a dictatorship (mild in comparison with some), but still a dictatorship, is an event which, while of doubtful benefit to Egypt, is certainly detrimental to a solution of Anglo-Egyptian differences. The Egyptian nation has been fighting, since 1882, for independence and constitutional government, and in this period the political knowledge of the people has rapidly advanced. Thus, any adjustment or settlement of Anglo-Egyptian differences which has not been accepted by the Egyptian people, that is, by its constitutionally elected representatives, must be without value.

Let us first take the Egyptian side.

Mohamed Pasha is a Liberal Constitutionalist and in spite of his recent action is a sincere believer in constitutional methods. In taking the steps which he has, many of his friends and admirers consider that he has been either ill-advised or unduly pessimistic of the Wafd's parliamentary régime. He has, however, every intention of re-establishing the Egyptian Constitution at the earliest opportunity.

In Egypt, opponents indulge in a battle of personalities, and the Egyptian Press is notable for vitriolic attacks on individuals. These methods should not be taken too seriously, as bitter enemies of to-day become close friends of to-morrow. Unfortunately, Egyptians themselves are particularly sensitive to Press attacks, and at the moment over-estimate the relative importance of these journalistic stunts. This leads to hasty action; a case in point is the present stifling of nearly all opposition opinion as represented by the Wafd Press.

But the Wafd, however incensed it may be with Mohamed Pasha for his unconstitutional action, must not forget how much sincere, patriotic and arduous work has been accomplished in the past by this man, and that equally with the Wafd, Mohamed Pasha acts only with the ultimate benefit of this country before his eyes and as his guiding principle.

Therefore the Wafd should never lose sight of the possibility of mistakes existing on both sides, and that the aim of both being identical, some means of bridging the present harmful gulf should be found at the earliest

opportunity. For the benefit of Egypt both in immediate external and internal problems the co-operation of every sincere leader is essential. Personal ambitions and rival jealousies must be subordinated in order to vanquish the reactionary forces and uphold progressive democratic government. The people of Egypt realise, better than any foreigner, the strength of these forces and the many strongholds from which a devastating attack can be launched on the young and somewhat undisciplined forces of progress. And, here I might be allowed to quote Clemenceau in his "Demosthène" as a caution: "C'est une autre chose de parler . . . la liberté, l'indépendance, la patrie même ou de réaliser la discipline intérieure, souvent sévère, que commande le service désintéressé des nobles causes plus faciles à clamer qu'à réaliser dans la vie."

Let the young and ardent patriots of Egypt recognise that shouting, railing and haranguing will not advance the cause of their country's freedom in comparison with co-operation, discipline and unity. But on that word "patriot" let me rest for a moment. In the history of England, no virtue has been more highly praised and no sentiment more deeply respected. How is it, then, that when the people of alien races proclaim their wish for independence, and work for this aim, they are so often labelled "agitators" and "rebels?"

Nothing is more mischievous and less worthy of the English people. True patriotism—not that patriotism which leads to aggression—is equally magnificent and befitting in the Egyptian as in the Englishman.

The régime instituted by Mohamed Pasha is unlikely to be accepted by the Egyptian people with enthusiasm, unless some almost revolutionary reform which would benefit the mass without being economically unsound is carried out. Such reforms are the *raison d'être* of dictators, since established prejudices and privileges can be ignored, and a reform which might take years by constitutional procedure be legalised and administered in a few months. But such does not appear to be the plan of Mohamed Pasha. His administrative acts, much heralded in certain English papers, are but a continuation of the late Parliament's legislation and are not of his own personal creation.

However, this is not a reason to criticise his administration: it is, on the other hand, a proof of his soundness and of his desire to put into action the best of the late Parliament's work for the benefit of his country, irrespective of the authorship.

The Egyptian people have fought too long and too thoroughly for a constitution to accept this present abrogation with good will. If elections were to be held in Egypt to-morrow, there appears to be little doubt as to what the result would demonstrate.

How does this dictatorship in Egypt affect England?

First and foremost, few Egyptians believe otherwise than that the English Government either assisted or gave tacit approval for the *coup d'état*. In the House of Commons it has been stated that the Residency knew that the event was about to take place. This implies nothing. But ninety-nine per cent. of the Egyptians are confident that the English Government acted, at least, with benevo-

lent neutrality. It is a pity that even a faint suspicion of British interference with the Constitution, outside the four reserved points, should arise. The British military occupation is a cause of this misgiving, since many Egyptians argue that their country would quickly have made it impossible for Mohamed Pasha to have carried out his coup if the people had not feared the intervention of British troops on the pretext of safeguarding foreign lives and property. But the greatest difference this régime makes to Anglo-Egyptian relations is the postponement which is brought about for the solving of the final form which these relations shall bear. The longer this remains unsolved, the less likely does it become that the final Alliance will rest on the real sentiment of good will which exists for England to-day in the hearts of the Egyptians.

There are three main reasons why I consider that the solution of these differences should be whole and immediate, and not partial and temporary:

(a) That the political energies of the Egyptian people are being diverted from the channel of internal progressive reform to the more burning question of sovereign independence. The former naturally suffers.

(b) That a solution on the basis of an Alliance is bound to come in time; in consequence, England should take advantage of the existing good will, and should give freely now what future circumstances will force her to grant.

(c) A friendly Egypt guarantees the Empire communication more assuredly than a hostile nation, cowed by battleships and various other means of repression.

Both sides must have faith and courage to solve the problem aright. It is the spirit of faith which should guide England in the final settlement, and not the doubts, the queries, the "ifs" and the petty safeguards here, there and everywhere, which do nothing but annoy, creating an impression that England has no faith in her Ally. For an Alliance to be accomplished, it is necessary that not only the British Government but also the British representative in Cairo should be imbued with the will to this end—for how often can the actions of one individual undo the work of many!

All questions such as protection for foreigners, judicial and financial advisers, European police, etc., are but by-paths of controversy, leading one off the basic route of difference—that is, the sovereign independence of Egypt and the vital communications of the British Empire.

Without going into detail, I suggest that:

(1) British troops should be immediately retired to Port Fuad, if not out of Egypt altogether.

(2) That Egypt should join the League of Nations. One year after her entry, all foreign privileges in Egypt would be automatically abandoned.

(3) Re-establishment of the Condominium in the Sudan, with the understanding that the Sudanese shall be gradually educated to administer their own affairs under the flags of Egypt and Great Britain.

(4) A defensive alliance between Egypt and England.

The path is clear! Let Mohamed Pasha re-establish the Constitution; let fresh elections be held; let the Wafd, if returned to power, nominate another Prime Minister in place of Nahas Pasha, so that both sides shall show conciliation in order to produce a real unity. Then, let the statesmen in England and Egypt, directed by good will and inspired by faith and courage, settle once and for all these dismal animosities and corrupting discords.

But let both sides remember the words of Nietzsche, "Art thou a slave? Thou canst not be a friend. Art thou a tyrant? Thou canst not have a friend."

And if this alliance is to be accomplished, let its base be founded, not on the shifting surface of the desert sands, but in the deep bed of Mother Nile around which the waters of prosperity shall ever flow.

To-day in the Near and Middle East British foreign policy has become noted for hesitancy and lack of decision. In the question of Egypt, where the goal is obvious, let courage direct to an immediate and just decision.—I am, etc.,

R. GORDON-GANNING.

23, Cork Street, W.1.

[Our correspondent combines in his letter many obvious and some highly provocative statements. There can be no ground at present for saying that the action of Mahmoud Pasha's Government in suspending (not suppressing) parliamentary government is of doubtful benefit to Egypt, as the time to form trustworthy judgment on the subject will not come until the Government has had a longer opportunity to show of what it is capable. Judged by past Egyptian standards, it would seem to have achieved marvels in a few months. It certainly cannot be proved that the existence of the present Government is "detrimental to the solution of Anglo-Egyptian differences," nor is it proposed to arrive at a permanent settlement of those difficulties without reference to the Egyptian people. All that the present Cabinet has done is to put those differences into the background, while it gets on with work of extreme urgency, the proper administration of the country. With the advice that our correspondent offers to the Wafd we are mainly in agreement. If it be the case that the Egyptian Press "is notable for vitriolic attacks on individuals," a Government that tries to change such a regrettable state of affairs, which is derogatory to the country and demoralising to public life, would seem to be worthy of support.

One clause in the letter suggests that what our correspondent calls Mahmoud Pasha's dictatorship would no longer be of "doubtful benefit" but would be of positive advantage to Egypt and would be accepted by the Egyptian people "with enthusiasm," if it were more dictatorial. The reference is to agrarian reform. As the "dictatorship" has not yet been in existence for six months, it seems hardly fair to blame it for not having done what must needs call for years of careful preliminary investigation. One of the grounds on which the present Government justified its action was that its predecessors got nothing done, in spite of laws' being passed by Parliament. Accordingly one of its first acts was to carry into effect long-delayed measures of pressing urgency for Egypt.

Our correspondent in being able to speak for ninety-nine per cent. of the Egyptians has an advantage which we do not possess. Most Britons, however, we imagine, have a higher opinion of the Egyptian people than he has, as they are quite prepared to believe that there are some

Egyptians capable of trying to save their country from administrative chaos, without prompting from Great Britain. The contention that the present régime has brought about a postponement of a solution of Anglo-Egyptian relations will hold water only if it can be shown that there was the least chance of any solution's being found under a Wafd régime. In the light of the experience of the last few years it would be supposed that no such solution was in sight when the present Government took office.

As for the points that our correspondent tries to make, we can say only that (a) is entirely contrary to the facts, as for the first time in six years the energies of the Egyptian people are being directed into the channel of internal progressive reform, and away from the question of sovereign independence. In (b) our correspondent urges that the Government should do now what he has already warned it not to do for three years, when parliamentary government may once more be in operation. Point (c) is so obvious that it serves only to call attention to the present "friendly Egypt" in contrast to the "hostile" attitude of Wafd politicians.

With regard to our correspondent's suggestions for a settlement, it is to be feared that the subject cannot be dismissed in a few words; but the settlement will, no doubt, be brought very near when those who summarily rejected, without discussion, the draft treaty of last year have taken to heart the excellent advice given to them in the letter.—ED.]

APPOINTMENTS.

The King has been pleased to approve the addition of two Puisne Judges to the permanent strength of the High Court of Judicature at Madras, and to fill the two vacancies thus created by the appointment of Mr. Henry D'Arcy Cornelius Reilly, I.C.S., and Rao Bahadur Chittoor Vaidyalinga Ayyar Anantakrishna Ayyar. His Majesty has also been pleased to approve the appointment of Mr. Krishna Pandalai as Puisne Judge of the Court in succession to the Hon. Muthiah David Devadoss, who is retiring, and the appointment of Mr. Alladi Krishnaswami Ayyar as Advocate-General, Madras, in succession to Rao Bahadur Chittoor Vaidyalinga Ayyar Anantakrishna Ayyar.

The King has been pleased to approve the appointment of Mr. Nripendra Nath Sircar to be Advocate-General for the Presidency of Bengal, in succession to Sir Brajendra Lal Mitter, who was recently appointed to be a Member of the Executive Council of the Governor-General of India.

STANDING JOINT COMMITTEE ON INDIAN AFFAIRS.

As foreshadowed in THE NEAR EAST AND INDIA on December 13, the following members of the House of Commons have been appointed to serve on the usual Standing Joint Committee on Indian Affairs with members of the House of Lords:—

Brigadier-General Charteris, Sir G. Hamilton, Colonel Howard-Bury, Sir A. Knox, Mr. Wardlaw-Milne, Sir F. Nelson, Mr. G. Peto, Mr. Pilcher, Mr. Scurr, Mr. Snell, and Mr. Wallhead.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

THE WEEK AT HOME

London, Saturday Morning.

The King's Health.

Incomparably the news that has heartened most people this Christmastide is the improvement in the health of the King. In many an obscure homestead prayers had been made for his recovery, and even among those of the more flippant sort there is discernible a sense of the ending of a certain strain or anxiety.

Instinctively tributes are being paid to the King's fight for health, and the universal sentiment is that the finest sportsman in the nation, who has never shirked a duty, is most deservedly pulling through.

Parliament.

As Parliament adjourned last week for a month's recess, one was prompted to wonder which of its accomplishments would stand the present Administration in the best stead. There can be no doubt upon this matter: it is De-rating. Wherever one goes, one finds the scheme of Mr. Neville Chamberlain regarded as the trump card of the Conservatives for the next election. Whether it will be sufficient to stay the progress of the Labour Party is another matter.

Over the question of unemployment, which hung like a shadow over the Parliamentary session, there is considerable perplexity. Could the Government have done more to alleviate the position? On the last day it voted £295,000 as a Supplementary Estimate for the relief of the distressed areas. This, however, is charity (although Christian charity which could hardly be denied) rather than statesmanship. All that the Government can do, it seems, is to talk of the transference of labour, emigration, and so on. These are helpful measures, but they touch, apparently, only the edge of the problem.

Meanwhile, the ground is fruitful for those whose business it is for whatever reasons to criticise the Administration. Even the Government grant to the miners was criticised by the Socialists.

Liberals' Troubles.

The Liberal Party cannot complain of lack of publicity for their activity, but unfortunately that seems so often to consist of quarrels within the camp. Now it is over Mrs. Runciman, and her scorning of Mr. Lloyd George's

help, now over the indiscipline of Captain F. E. Guest, who was at one time Chief Liberal Whip.

Captain Guest has caught it "good and proper" from Mr. Lloyd George's supporters. Actually in his constituency in Bristol a rival Liberal candidate is to be set up—with the inevitable result, so it is said, that a Socialist will be returned! The joke of it is that Captain Guest is stated to have been largely responsible for the raising of Mr. Lloyd George's "Personal Fund." What tales he could tell! But will he?

Holly and Christmas.

"Heigh ho, the holly!" But where is it this Christmas? Hardly a berry is to be seen, no matter where you go (I write, of course, before Christmas Day itself). The reason is, of course, that the gales of November swept down the berries from the branches, berries which until then were plump, red, and abundant.

What good holly there is this Christmas comes, like the mistletoe, from the Continent.

The King's English.

If you came across this sentence (which appeared in a legal document exhibited during the hearing of a case in the King's Bench Division last week)—"They or neither of them are liable"—what would you make of it? The Judge before whom this monstrosity was brought rightly described it as "really shocking English"; but the amusing thing is his interpretation of the sentence.

Mr. Justice Horridge suggested that the sentence ought to read: "They are not, nor are (is) either of them liable." Possibly; the Judge knew the context. But the words themselves would appear to mean: "Either they are liable, or neither of them is liable." What do you make of it?

The Road Burst.

Nobody who saw the road explosion in the West Central district last Thursday could help thinking, first, of the Zeppelin bombs during the War, and secondly, of the intricacies of modern civilisation. A less advanced city than London, although it might be subject to such calamities as earthquakes, would not have this vast subterranean system of gas and electric light and of telephonic communication. We hardly realise, indeed, what we are walking over nowadays.

Obviously this explosion, which by extraordinary luck caused the death only of a horse, has scared London. And indeed it is a very nasty experience to know that if you come down more or less whole after being flung up from the pavement you stand a very good chance either of being set light to by flames or of being gassed. Such accidents happen so rarely, however, that in a few weeks the incident will have been forgotten for most purposes.

Three to Play.

With unusual relish and tenderness one got down one's bats this week for their (all too rare) winter oiling, for the news of England's second Test-match victory had stiffened with pride the hopeful cricketers in this country. Certain things, admittedly, there are to criticise about the English batting in Australia, but the efficiency of the team, as so far displayed, is most heartening.

Nor are Australia quite the "rabbits" which certain eager decriers have made out: they may, in fact, pull one or two nasty-looking rabbits out of their capacious caps before the Fifth Test is finished. Up to the present, however—even granting, and deploring, the bad luck of the Australians in injuries and illness—all has gone well. Of course, there are still people who know better than Chapman who ought to be picked and what ought to be done, but there are, on the other hand, hosts of sensible people who trust and him and his team to see the thing through to its correct conclusion.

REFORMS IN EGYPT

In spite of notable progress throughout the last forty years, the reforms on which Egypt has now embarked are sufficiently striking and numerous to constitute a separate chapter in the history of the country. They form, moreover, a fitting prologue to the era of independence inaugurated six years ago. In the circumstances of the British occupation it was inevitable that much should remain undone in respect of the normal development of the country; it was the purpose of Great Britain to help the Egyptians to look after themselves, not to do everything for them. Progress, therefore, although maintained, was uneven and partial. There was a tendency on the part of the Egyptians to look to their British advisers for a lead, and on the part of the British to leave in certain spheres the initiative to the Egyptians. Possibly in no direction was this divided purpose and lack of effective co-operation more clearly seen than in regard to education, with the result that the grant of independence in 1922 found Egypt still with the great mass of her population illiterate.

Accordingly, in the programme of reforms special attention is being given to education. The Budget for Public Instruction has risen from less than half a million in 1917-8 to over two millions in 1927-8, and to-day nearly seven hundred thousand young people are receiving instruction in Egypt. Not the least significant innovation is the reform of the thousand-year-old University of Al Azhar. The process has been effected gradually. The first step was the re-organization of the Higher Council of the University, which was carried out by the promulgation of numerous laws and rescripts in 1920 and 1921. Although Al Azhar has shared with six other institutions in Egypt the work of imparting Muslim religious instruction, it differed from the others in embodying higher education in addition to the elementary and secondary education given by all. The attempt in 1911 to impart higher education at other institutions under the condition that the final examination for the degree of Alim (Ulama) should be held in Cairo was not successful owing to the failure of other centres to reach the Cairo standard, and in 1921 it was decided that all higher education should be centralized at the University of Al Azhar. Certain reforms were introduced in regard to the entrance examination, discipline and the curriculum; but it was not until the present year that the problem of more radical reforms was grappled with successfully. A commission, on which the University and the Government were represented, has agreed upon certain recommendations designed to bring Al Azhar into line with modern Universities. It is intended that it should retain its old pre-eminence

in the Muslim world for its religious teaching, but that it should at the same time offer to its students the advantages of training in science and the arts on modern lines.

Foremost among the social reforms now being carried out by the Egyptian Government is the endowment of the country with hospitals which will be within easy reach of the peasantry. The existing hospitals are almost exclusively in the large towns. It is proposed, therefore, to build a hundred hospitals in villages and another fifty in the smaller towns, the work being proceeded with at the rate of thirty hospitals a year. These hospitals are intended to serve as educational centres where the principles of child welfare and elementary hygiene can be taught to a population at present totally ignorant of such things. The prevalence of certain endemic diseases in the country is a permanent handicap to the efficiency of the population, and, in addition to the steps now being taken to extend the application of remedial measures, it is sought to deal more effectually with the causes. To this end special attention is now being paid to the sanitary conditions throughout the country. Insanitary village ponds, that have been formed in holes made by the removal of earth for mud bricks and used for the dumping of refuse, are to be cleaned and filled up, adequate steps are to be taken for the more general distribution of clean water for drinking purposes in villages; and in towns provision is to be made for better housing accommodation for the labouring classes.

Finally a big programme of public works will not only materially increase the productivity of the country, but will also put into circulation large sums of money which will help to remove the financial stringency from which Egypt has suffered during the last few years. The irrigation projects, as is well known, include the construction, now in progress, of the Nag Hammadi Dam, the raising by seven metres of the Aswan Dam, and the creation of the big Gebel Aulia Reservoir on the White Nile above Khartoum. At the same time considerable impetus is being given to road construction, not only for the improvement of the main thoroughfares in view of the requirements of motor traffic, but also with special reference to the needs of the fellahs in the marketing of their agricultural produce.

All these reforms, it will be noticed, affect the material well-being of the nation and call for no political creed to endorse them. They commend themselves to all sections of the population, and the urgency for them has long been recognized. The merit of the present Government consists in no small measure in its resolve to subordinate all political considerations, however much desired, to the pressing needs of the country.

Cairo and its Development

Cairo, the largest city in Africa, and the capital of Egypt, with a cosmopolitan population of, roughly speaking, just over one million, is of peculiar interest to the traveller, town-planner, and archaeologist alike. Its varied characteristics and extensive history have bequeathed a legacy to posterity of innumerable beautiful monuments of Arab civilisation dating from the tenth century A.D., as well as a very extensive quarter of primitive disposition, which is redolent of the atmosphere of a thousand years of Oriental life.

The pre-Arab history of Cairo is so vast and vague as to be impossible to recount here, and there have been many towns, variously named, built round about its site, but its present name is said to have been

imbued with modernised ideas, but lacking in co-ordinated directive effort, the Government authorities are unable to enforce general advantages as opposed to private interests. The work, moreover, of preserving the archaeological beauties and the character and atmosphere of the City's old quarters (both opposed to modern ideas of sanitation and traffic facilities), as well as of replacing, where imperative, with wisdom and taste, demands a considerable knowledge and sympathy.

Geographically Cairo is situated approximately at the apex of the Nile Delta, and is closely confined on its eastern limits by the Mokattam Hills, a long scarp of fossiliferous limestone, some 500 feet in height. To the west the boundary may roughly be considered as the River

CAIRO: THE KASR EL NIL QUARTER.

In the background (from left to right) the British Residency, Hotel Semiramis, Kasr el Nil Bridge, and the Barracks.

given to it about the year 960 A.D.—Kahira, or El Kahir (Arabic for the planet Mars, which was in the ascendant when the first trench was dug), which became corrupted to Cahere—Caïre—Cairo, for Europeans. Saladin in the 12th century A.D. was one of the first creators of Cairo as we know it, and some of its most famous landmarks, such as the Citadel Mosque and Fortress, and the first hospital for sick people, Egypt owes to him. Following the Ayubites, to which dynasty he belonged, came the Mameluks, during whose 300 years of power were built the greater number of the ancient mosques still standing in Cairo to-day.

In 1801, during the reign of the Viceroy, Mohamed Ali the Great, the modern development of Cairo began, and this in close juxtaposition to the medieval city and monuments has been such as to create a problem difficult of solution; for under inadequate legislative control of the building activities of an ever-increasing population,

Nile, the cultivated land behind the western bank being waterlogged annually in many areas during the flood season, and so having restricted development up to date, although a limited number of good class villa residences have been built here within the last few years. To the north-east of Cairo, however, there stretched a gently sloping desert plain, along the fringe of which have recently grown up the City's most northerly extensions, and still farther afield lies in the desert the rapidly growing suburb or rather satellite town of Heliopolis, the property of an enterprising Belgian Land Development Company, which, undoubtedly, forms the nucleus of a city of the future.

Until the 19th century the city extended on the west about half way between the Khalig Canal and the Nile, the remaining area as far as the river bank being occupied (with the exception of the river port of Boulaq) by a few places with their surrounding parks. This Khalig Canal

is now filled in and forms a narrow street running north and south and carrying a tramline. One very large area of Cairo, which is to-day the most modern and important residential and commercial quarter, formed at the beginning of the 19th century a portion of the estates of the Khedivate. This, the Ismailia quarter of Cairo, owes its inception and well designed planning (although the streets are now proving too narrow for modern traffic conditions) to the Khedive Ismail Pasha, father of King Fuad, who, carrying on the parental tradition, also takes the greatest interest in the development of his capital.

Improvement schemes of modern times under the auspices of departments of the Central Government, with whom lies the care of Cairo (which is not governed municipally), were largely confined in pre-War years to new bridges across the Nile, and to necessary main arterial connexions therewith, including some river promenades. As regards the period since the War much has been done, and still greater works are in view. Important projects have been studied with the object of opening up congested quarters, augmenting facilities for the ever-increasing motor traffic, creating arterial streets easily and directly linking up important districts at present semi-isolated, providing in advance for the city's growth, and acting as guide to its future developments.

During this post-War period an expenditure of more

ON A BRANCH OF THE NILE.

than £E1,500,000 has actually been incurred in acquiring property for street improvements; and projects, formally approved and actually in course of execution, will require many millions for their completion. The necessary funds for works of this nature are a direct charge on annual Government Budgets and are not found by means of loans. The instrument available for the compulsory acquisition of properties for schemes of public utility is the Law of Expropriation of 1906, by which the authorities are empowered, by the issue of a Decree, to expropriate in general all property so required; the revision of this Law is now under consideration.

Of town-improvement schemes those which stand first in importance and which, moreover, are rapidly approaching completion are the two new arterial streets radiating from the commercial quarter of Cairo, one north-eastward and one eastwards, costing together about one million pounds. One of these, Sharia Emir Farouk (named after King Fuad's little eight-year-old son), which is about $1\frac{1}{4}$ miles in length and about 100 feet wide, has been driven straight through a highly congested and densely populated area, ill served with streets, to make connexion from the city's centre to another principal arterial road leading to the extremities of the ever expanding northern suburbs. The other radiating arterial highway Sharia El Azhar, which is $\frac{3}{4}$ of a mile in length and about 85 feet wide, has been driven parallel to a narrow over-crowded street, the Sharia Mousky, which leads to Cairo's famous and picturesque bazaars, and which is annually traversed

by the many thousand tourists who visit Egypt's capital.

This new artery will not only greatly relieve traffic in the Sharia Mousky, but will directly link up the splendid Azhar University and surrounding monuments with the commercial portion of the city, whilst also serving a district in which many business firms have their warehouses. Both these new arteries will terminate at a point where it is intended in the future to create a very fine Square, which will provide an important central station both for the tramlines that these new streets will carry, and for many other existing lines, all of which will be linked up at this point. As the creation of this Square will entail the demolition of the building which is the present Mixed Courts of Justice, its execution is necessarily being held in abeyance, pending the completion of the magnificent new Mixed Courts, now under construction elsewhere.

Another very important city improvement scheme, the preliminary works of which have been begun, will provide at a cost of some £E400,000 a fine arterial connexion joining up not only the proposed extension of the Main Railway Station, but more particularly the rapidly developing northern area of Cairo (the Shubra district), at present "locked in" between the main railway lines and the River Nile, with a narrow bridge as sole connexion with the centre of the city.

Over this bridge, moreover, must now pass all road traffic from Cairo to Lower Egypt and Alexandria, and this traffic of growing importance will be signally served by the new connexion.

The scheme comprises two subways, the major one to be 130 feet wide, to provide for tramlines as well as adequate space for general vehicular traffic, passing under a main street and the main railway lines; and the second one about 90 feet wide will facilitate access to the Railway Station as also to the Shubra district, for traffic approaching from the north and east. Both these subways, with their approaches, will, when completed, considerably aid in reducing ever-growing traffic congestion in the present Railway Station Square and its access streets. The distribution of the Railway's goods traffic from the new centralised good yards is a problem to which much study has been given, and its solution will involve the construction at considerable expense of two additional subways with access roads, by means of one of which alone, when completed, it is estimated that 60 per cent. of the heavy railway goods traffic could be diverted from present congested centres, and more rapidly distributed to the commercial quarters of the town. Very interesting problems are under study in connexion with the possible electrification of the suburban railway lines to the north and to the south of Cairo. The city terminal stations of these lines are at present separate and lie at some distance apart, so that their linking up is obviously very desirable, and in this connexion reference must be made to a most important street-widening scheme, estimated to cost at least two millions, of which the Egyptian Parliament has approved, and for which annual grants have already begun to be made. This scheme comprises the widening to a minimum of 130 feet of the present Sharia Khalig, which is to-day for the most part a narrow street of about 30 feet wide, formed, as has been mentioned before, by the filling in of the old Khalig Canal. This street traverses the main portion of the city from south to north, dividing it almost in half, of which the eastern portion contains the medieval City, with its numerous mosques, bazaars, and old-world narrow, tortuous streets filled with teeming life, whereas the western area comprises most of modern Cairo proper.

In its future widened form this thoroughfare will provide a magnificent route, three miles in length, of sufficient width to carry tramways and eight lines of vehicular traffic and will, moreover, serve as a ready means of linking up the northern and southern suburban railways by means of an overhead electric railway conveniently tapping the heart of the City.

As regards the general town planning of the still undeveloped agricultural area on this immediate north of the

City, which comprises some 3,000 acres, certain preliminary studies and outline plans have been made, as the continuous trend of growth in this direction clearly foreshadows it as a zone which Great Cairo will include in the near future.

These plans foresee a fine internal Port on the dead end of the old branch of the Great Ismailia Canal, which is to be bridged by main arterial roads, the regrouping of State Railway shunting yards and sidings, with viaducts or subways carrying important thoroughfares designed to link up the existing north-eastern extension of the City with the River Nile, as well as with the main road from Cairo to the north, i.e., Lower Egypt, and with the Shubra district of the City north of the main Railway Station. A great park of some 300 acres along the north boundary of the City's projected extension is a prominent feature of such studies.

In respect of the streets and roads of Cairo, covering to-day an area of about 4,000,000 square yards, there still remain about 500,000 square yards unpaved. Since no legislation exists to oblige private owners developing

several of the principal thoroughfares leading out from the centre to the more distant suburbs will be civic works of striking modernity and imagination. One of these, already partially completed, bears the name of Queen Nazli; another about to be undertaken is the famous avenue leading to the Pyramids of Giza.

With respect to City cleansing, refuse disposal, etc., the expenditure thereon during the past few years has been doubled, and now amounts to about £100,000 per annum. A project is under study for the erection of a series of large modern Refuse Destructors to deal with the City's garbage in a more hygienic manner than the dumping in worked-out quarries and low-lying areas now in practice.

The vast problem of the proper housing of the working classes, the solution of which is so greatly exercising authorities throughout Europe, is forming the subject of active study by the Egyptian Government. The recognised need for urgent measures in this regard has been greatly accentuated in Cairo through the necessary demolition of much poor-class property in the course of carrying out improvement schemes. Decisions which have

SILENT ON A PYRAMID AT GIZA.

property as building estates to pave their streets, the cost of such paving ultimately falls upon the Government. During the past five years some 250,000 square yards of such unpaved streets have been constructed.

As regards maintenance of paved streets and roads, the sudden development of mechanical transport after the War quickly revealed the weaknesses of the tar-painted basalt macadam, which then formed the surface structure of almost all the streets, including main thoroughfares. In 1923 modern methods of two-coat sheet asphaltting laid upon the existing macadam were introduced with such marked success from the point of view of both traffic and hygiene, that so far some 1,000,000 square yards have been completed, and this work now forms the principal annual item in the City's road maintenance works. Two mixing plants, with complete equipment, testing laboratories, mechanical transport, etc., enable some 250,000 square yards to be laid annually, all work being carried out by Departmental staff and labour. In consequence the surfaces of the principal streets of Cairo to-day invite favourable comparison with those of the largest modern cities. Moreover, the remodelling on approved modern lines of

just been taken by the Government comprise the reservation of three selected zones upon which dwellings of hygienic design will be erected. Of these zones, one on the high-lying land on the east of the City covers an area of some 110 acres. Another in the north-west area comprises about 24 acres. The third in the south area is of some 12 acres in extent.

In conclusion, it may fairly be claimed that the Government authorities responsible for Cairo's welfare, for its ever-increasing population and also its annual visitors from all parts of the civilised world, are fully alive to their responsibilities: and, were it not for financial restrictions, largely deriving from the Capitulations, with their embargo on normally legitimate civic taxation, combined with the difficulties from the same source which arise in any endeavour to introduce Building and Street By-laws, Town Planning legislation, etc., the remarkable progress already attained in spite of such obstacles and restrictions would in the near future be still more rapidly surpassed: making Cairo a capital worthy of the most ancient civilisation of the world and one of which this rising country may truly and justly feel proud.

Some Features of Egyptian Agriculture

By A. M. GREISS BEY.

From earliest times Egypt has been almost solely an agricultural country, and this in spite of the fact that it is practically rainless. A beneficent Providence has compensated for this lack by the Nile, which flows throughout the country from its southernmost limits to the Mediterranean. The Nile is the only source of water supply for cultivation, and, indeed, for the maintenance of life generally.

The Basin System.

Rains in Abyssinia have occurred with the greatest regularity throughout the ages at a definite period each year. These rains are responsible in turn for a regular yearly rise of the river. Thousands of years ago the annual rise was taken advantage of for cultivation, and in this way, when the river rose, it overflowed into the so-called basins, which were bounded by their earthen embankments and which now vary in size from 500 acres to 75,000.

When the river subsided this water flowed back into its channel, and the land which had been submerged was then sown with crops such as wheat, barley, beans, etc. They received no more attention nor water until the harvest. No simpler form of cultivation could be imagined, and yet under this system Egypt was at one time known as the granary of the Mediterranean. For the crops then grown—winter crops only—the method was quite satisfactory, and there was no loss of fertility of the land. This system, moreover, provided both food and clothing for the population, in wheat and flax.

Perennial Irrigation.

The year 1821 saw the beginning of a new era in cultivation. In that year the cultivation of cotton was begun, and, being a summer crop, it could be grown in the first instance only on the river banks where water was available for the lifting. As the crop was a success under these limited conditions, the then ruler of the country, Mohamed Ali, desired to extend its cultivation, and this was possible only if irrigation could be extended. With this end in view he had canals dug which would take the water from the Nile in the summer, when the river was low. This was the beginning of the perennial

as opposed to the one crop obtained formerly, and whereas the winter crops still leave a margin of profit to the cultivator, it is the summer crops of cotton which have so enriched the country.

The lot of the cultivator under present conditions is probably unrivalled in any country; for, apart from a guaranteed and regular water supply when the crops

Cotton under Perennial Irrigation.

require it, the fertility of the soil is almost proverbial, and climatic conditions from the agricultural point of view are also almost unique. Labour, moreover, is always plentiful and cheap. As an illustration of the fertility of Egyptian soil, it may be pointed out that whereas India gives about 100 lb. of cotton per acre and America about 150 lb., Egypt averages 325 lb. in the Delta and 400 or more in Upper Egypt; yields of even 1,000 lb. to 1,100 lb. are not uncommon in certain districts. Climatic conditions in the country have been and are so uniform from year to year, that to this day cultivators carry out their agricultural operations on the same fixed dates each year, using the ancient Coptic Calendar for their guide.

In regard to the land itself, it is of alluvial origin, and, owing to its great fertility and the facilities provided for irrigation, its price is high compared with other countries. An acre of good cotton ground will cost from £200 to £300, or it may be rented at from £15 to £20.

Cultivation.

Cultivation is still carried on largely as it was in the earliest times, the ancient native plough drawn by oxen, and the "fass" (hand hoe) being still the chief implements used. In recent years, however, big landowners and companies have been gradually introducing modern machinery.

A great variety of crops is grown. The main summer crops are cotton, maize, rice, sugar-cane. Cotton easily comes first in importance. Winter crops are wheat, barley, Egyptian clover (Berseem), beans, lentils, lupines, onions, etc.—in fact, all kinds found in temperate climates. Egyptian clover is, perhaps, worthy of special mention. Sown in early autumn, it gives as many as five cuttings of about 7 tons each per acre, or four and a seed crop in eight months. This is the staple green fodder for all cattle. The excess over immediate requirements (and there is always an excess) is turned into dreis (hay) for summer use, when fodder is scarce.

Rotation of crops under basin irrigation is simple—one year, cereals, and the next, leguminous plants. Under perennial irrigation the rotation is either a two or a three years' one, but now by law the latter is enforced on cotton land.

The Flooding of Land under Basin Irrigation.

The net result of this change is that both summer and winter crops can be grown on the land in one year, system of irrigation and was extended as time went on, with the help of Barrages and Dams, to store water and to raise artificially the height of the river, until to-day the whole of the Delta and a considerable part of Upper Egypt are under perennial irrigation.

Egyptian Irrigation Works.

Nag Hammadi Barrage.

The Nile and Egypt are in a sense synonymous terms, for the civilisations which throughout the centuries have grown up and flourished along the Nile valley have owed their existence to that wonderful stream which, flowing like a scarlet thread of destiny from its sources to the Mediterranean, has borne facilities for life along its course, and has permitted the creation of fertile tracts supporting a denser population than any other area of the same extent in the world. It was not until the last century, which was rendered notable by the construction of the Delta Barrage, that a really determined attempt was made to exploit to the full the enormous resources of the river which is Egypt. In the present century in rapid succession came the first Aswan Dam, Barrages at Assiut, Zifta, and Isna, the weirs at the

Street, S.W.r., has been in process of construction since last year by the famous firm of contractors, Sir John Jackson, Ltd., who have been responsible for so many important works—the Hindieh Barrage, for instance, in Mesopotamia—and who have recently been given the Singapore dock contract. The second project—the White Nile Dam at Gebel Aulia, which will permit of the storage of a vast volume of water, is now the subject of investigation by an international commission appointed by the Egyptian Government. The remaining works include a reservoir at Lake Albert for the provision of storage for Egypt's ultimate needs, a channel in the Sudd region—or more probably a “bypass” for the Nile round the Sudd area—to enable the water from Lake Albert reservoir to reach the main Nile,

THE NAG HAMMADI BARRAGE: Early Stages

The Lock Walls are seen in the background; in the foreground the first section of the Barrage is nearing completion.

Delta Barrage, and the heightening of the Aswan Dam. (In 1925 the Makwar or Sennar Dam, in the Sudan, was completed, but its primary object is the Gezira). The motive power behind these projects, past and to come, has been the rapid increase in recent generations of the Egyptian population, which has called for a continual increase in the area under cultivation. Thus, while in 1846 the population amounted to 4,476,440, by 1897 it was 9,734,405, and at the last Census, in 1927, it was 14,168,756. At this rate of increase the population in 1955 will be in the region of 20,000,000, in which year the country will be using its maximum cultivable area.

Of the five remaining projects, one, the Nag Hammadi Barrage, which was designed by the engineers, Messrs. Coode, Wilson, Mitchell and Vaughan-Lee of 9, Victoria

and a Dam at Lake Tana, in Abyssinia. If and when these works are carried out—and much uncertainty naturally exists in regard to the last three, in particular the Lake Tana project, which is the most difficult of all the undertakings in view of its political aspect—the two countries threaded by the waters of the Nile will have the ultimate resources of the river at their disposal. While, as has been pointed out, it is anticipated that the full cultivable area in Egypt will be utilised by 1955, or more than a couple of decades after the construction of the Dam at Gebel Aulia, the date of the development by Nile irrigation of the full cultivable area in the Sudan is put 50 years on, allowing, *inter alia*, for the later inception of the other projects.

The Nag Hammadi Barrage project has been planned

to serve two ends. In the first place the effect of the construction of the Gebel Aulia Dam will be to lower the height of the Nile flood, and the Barrage is intended to serve as a protection against land being consequently left unwatered. The two projects, incidentally, were originally to have been finished at the same time, but it was decided to postpone the White Nile scheme, with the result that the protective works will be finished in advance. The second object of the Barrage is to enable a fertile region of about 500,000 feddans to be converted from basin to perennial irrigation. The importance of this may be illustrated from the statistics for 1913, when in this region 128,000 feddans were left unwatered and 58,000 feddans only received half the necessary supply of water. The area is to be converted from the basin to the perennial system by instalments of about 50,000 feddans a year. Tenders for the construction of the Barrage were invited in November, 1926, and were to be sent in by the following April. Altogether nine tenders were received, and the contract was awarded to Sir John Jackson, Ltd., whose tender was £1,976,555, which compares with the official estimate of just under £2,000,000.

The work on the Barrage, which will be approximately 825 metres long with a lock on the western bank, began in the autumn of 1927, and the Barrage will be completed in three sections. The past season's work comprised the lock and western section of the Barrage, illustrations of which appear on pages 769 and 777, while in the present season the middle section of the Barrage is to be completed, leaving the section which will connect up with the eastern bank for the following season. The Barrage is scheduled to be completed by August 1930.

The lock is 16 metres wide by 80 metres long, and it will be crossed by a swing bridge to enable a tramway and a roadway to be carried across the Barrage. The Barrage itself is in general outline planned on similar lines to the Assiut and Isna Barrages, but instead of the 120 vents of 5 metres of these Barrages it will have 100 vents, 6 metres wide, thus avoiding the construction of 20 piers and enabling a substantial economy to be effected. Each of the vents is fitted with sluice gates to control the discharge of the river. There is, it will be seen, a width of opening, if all the gates are raised, of 600 metres. Each of the vents is to have two gates, and the depths of these gates, varying according to their position, will be 6.1 metres, 7.1 metres, and 8.1 metres respectively.

The 100 vents will be formed into ten groups of ten each by abutment piers at each end of the Barrage and main piers at every tenth vent. The abutment piers will be 14 metres wide, the nine main piers will be 4 metres wide, while the intermediate piers will be 2 metres wide, except those at the furthest western ten vents, which are 2.25 metres wide. The construction of the piers is much the same throughout. For the lowest 2.4 metres they are being faced with dressed granite, and for the rest of their height they are being faced with dressed limestone ashlar and limestone blocks. The interior of the piers will consist of limestone rubble masonry in 2 to 1 cement mortar. The piers are joined by arches with a radius of 4.35 metres. As regards the foundations, the whole structure has to be erected on sand, sheet piling being used for the full length of the Barrage on both sides, as in the case of the Assiut and Isna Barrages, with the difference that this time universal joist steel sheet piling is being used. On the upstream side there will be two lines of piling 1½ metres apart, the intervening space being filled with concrete. The floor will consist of 6 to 1 Portland cement concrete throughout, with aprons of shaped concrete blocks, and where special resistance is required the concrete is paved with granite blocks. Where necessary, as at the western end, the flooring is stepped. It remains to add that the Barrage will be crossed by a roadway 6 metres wide, which will have on it a 0.60 gauge line of tramway rails.

An account only of the actual work which is being undertaken quite fails to give an adequate impression of

the vast organisation which is rendered necessary for carrying out a scheme such as this Barrage. Sir John Jackson, Ltd., have had to build at Nag Hammadi what is practically a settlement to meet the needs of the staff comprising 95 Europeans and in the working season some 5,000 native labourers. A hospital has been built, and canteens, recreation rooms, and tennis courts have been provided. Then a power station has been constructed which, besides supplying power for the works, lights the whole colony. The necessary water supply has been obtained by sinking wells and by purifying Nile water. Beside the power station well-equipped workshops for machine tools, etc., have been erected.

Then, as regards material, the work has involved opening up a quarry 55 kilometres down stream, another quarry for limestone on the east bank, and sandpits some 44 kilometres upstream from the Barrage. From the main limestone quarry the material has to be brought three miles by railway to the river bank. A fleet of seven tugs is employed for transport to the site. By the time the Barrage is finished 70,000 tons of cement

Mr. PERCY WESTACOTT, M.I.C.E.
Managing Director of Sir John Jackson, Ltd.

[Photo by Miles and Kaye.]

will have been used, 180,000 tons of sand, and 550,000 tons of limestone.

The problem of communications between the east and west banks of the river presented some difficulty, as it was desired to avoid causing any unnecessary interruption in the river traffic. A solution was found in the construction of a series of cableways, which have been used to transport materials and men from one side to the other, to remove the wet sand from the Nile bed, to place the concrete of the foundations in position, and for other purposes. Naturally in the third season when the work is concentrated at the east end of the Barrage, the cableways will be of enormous utility.

Two canals take off from the east bank, one directly above the Barrage, while on the west bank there is the Fouadia Canal, and for this canal the contract for the Barrage provides for the construction of a regulator with six openings 6.0 metres wide each, with two abutments and five piers. The conversion to perennial irrigation of the area which the Barrage is designed to serve will be carried out by a comprehensive system of canalisation on lines similar to those which have been followed in the development of other areas in Egypt.

SUDAN

A Shilluk

From December to March the climate of the NORTHERN SUDAN is ideal. Tourists can reach KHARTOUM *via* EGYPT, or proceed to PORT SUDAN direct by various steamship lines. Passengers travel in complete comfort both by rail and river. The GRAND HOTEL, KHARTOUM, and the PORT SUDAN HOTEL are under the Management of the Railways and Steamers Department. During the winter months the social life of KHARTOUM is at its height, and tours of great interest are organised for the benefit of visitors by the Railways and Steamers Department.

□ □ □

BIG GAME SHOOTING

THE SUDAN is one of the most easily accessible countries in which Big Game abounds, and its large territory affords a most varied choice of shooting grounds.

□ □ □

PRIVATE STEAMERS can be chartered at fixed rates which include catering, servants, transport animals, forage and attendants, bearers, skimmers and camp equipment.

□ □ □

As the number of steamers available is subject to the demands of river traffic, prospective charterers should make early application. Excursions can also be arranged in conjunction with the Game Warden, Khartoum, for those wishing to shoot in the Blue Nile, Kordofan or Dongola Districts. Full particulars from—

THE SUDAN

The Gateways of the Sudan

Egypt and the Sudan—whatever the politicians of the former may say to the contrary—are two separate countries, presenting to the traveller two very distinct identities, and it is as much a mistake to think that an impression of the Sudan can be formed from a visit to Upper Egypt, as it is to conclude that the country has been seen when a few days have been spent in Khartoum. For its own attractions and for the variety of experiences that it offers, the Sudan merits a visit "on its own"; that such a visit can be combined with one to Egypt is the traveller's good fortune, but let the Sudan be just as much a goal at the latter.

For those who approach it from the northern hemisphere the Sudan can be entered by two gates—at Wadi Halfa from Egypt, at Port Sudan from the Red Sea. Each route has its own attractions. From Port Sudan the railway has to surmount the hill country which borders the Red Sea coast from the Gulf of Suez to the Abyssinian plateau. The watershed of the range lies between thirty and forty miles from the sea; the line has to rise to a point 3,000 feet above sea level, and, after leaving the coastal plain, climbs for over 50 miles an almost unbroken gradient of 1 in 100. Magnificent panoramic views are a feature of this part of the journey. Thamian, 118 miles from Port Sudan, is the junction for the Kassala Railway, which is now being extended from Gedaref to Sennar, where it will join the Khartoum-Kosti-El Obeid line. The latter stretch of this line from Sennar to El Obeid running, as it does, almost east and west,

is of interest as lying very nearly midway between the northern frontier of the Sudan at Halfa and its southern frontier at Rejaf on the Uganda borders. In this connexion it may be noted that it is the railway that serves the northern half of the country, while in the southern half communications are maintained by steamers on the White Nile and its tributaries.

Coming from Egypt, the traveller to the Sudan leaves the Egyptian State Railways at Shellal and embarks on a steamer of the Sudan Railway and Steamers Administration for Halfa, which is reached in thirty-six hours. The journey affords a delightful prelude to a stay in the Sudan. It is full of historic interest and the scenery is striking. The rugged gorge of Kalabsha; Korosko, where the old caravan road to Abu Hamed leaves the river, and where Gordon disembarked on his last journey to Khartoum; the rock fortress of Ibrim; Toski, where the tribesmen of the Khalifa were routed in their attempt to invade Egypt; and the great temple of Abu Simbel, one of the most wonderful of all the temples of Egypt, are passed in succession by the steamer on its way southward from Shellal to Halfa.

At Halfa, the northern frontier station, the traveller has his first experience of that efficient paternal administration which helps to supplement the differences of climate, scenery and character that distinguish the Sudan from Egypt. The contrast is provided in the terms of an official notice:—

"Travellers, while in the Sudan, are particularly requested to refrain from gaining an easy reputation for generosity by giving money to children, beggars or other people who have not earned it."

GLASGOW

At present the population of the Sudan has not been demoralised by indiscriminate almsgiving, but it will not require much of this to make the demand 'bakshish' as importunate and annoying to travellers as in Egypt itself, and cause a considerable number of natives to forsake the paths of honest industry for the unwholesome existence of preying upon others."

The well-ordered efficiency that characterises the steamer service is met with on the railway system. A *train de luxe*, specially built for desert travelling, conveys the traveller from Halfa over the 560 miles to Khartoum, of which the first 230 miles are through the uncompromising desert, until the Nile is reached again at Abu Hamed. Atbara, the junction for the Port Sudan line, and the headquarters of the Railway Administration, is the most important station passed, and Khartoum is reached over the Blue Nile Bridge—the longest in tropical Africa—which carries, in addition to the railway, a road and a tramway.

Not the least impressive feature of Khartoum is the width of its roads. The town, built on lines laid down by Lord Kitchener, is situated at the junction of the White and Blue Nile, with Khartoum North on the other bank of the Blue Nile, and Omdurman stretching northwards for miles along the left bank of the White Nile. Most of Khartoum's main avenues radiate from common centres, after the pattern of the Union Jack. While the arrangement would undoubtedly facilitate military operations in case of need, the generous breadth

of the roads is likely to constitute a burden on the local exchequer when the day comes for placing them in a condition that Western standards require for the thoroughfares of a modern town. The spaciousness of Khartoum is in keeping with the extent of the territory whose destinies it is called upon to control. It is the nerve-centre of an administrative machinery that offers probably the most successful example of British tutelage over a backward country, and this aspect of the capital and its personnel will engross the attention of the inquiring traveller long after he has exhausted its guide-book "sights." The Palace, Gordon College, the Zoological Gardens, the Sudan Club are among the landmarks in a setting which is sufficiently *sui generis* to hold the interest of those who have made the long pilgrimage.

Yet Khartoum is little more than an inner gateway of the Sudan. Some idea of the size of the country will be gathered from the fact that yet another train journey, as far as Sennar or a steamer trip to Kosti, is necessary before the half-way meridian is reached. If the fortunate traveller is bound for the south, he can still embark at Khartoum on his fifteen hundred mile journey to Rejaf. When the Gebel Aulia Dam has been built a short distance above the junction of the two Niles, the terminus of the steamer service may possibly be transferred to Kosti. The Uganda tour from Khartoum, however, calls for a separate account.

Khartoum to Uganda

By G. O. WHITEHEAD.

Those who mean to make the journey from Khartoum up the Nile to the Uganda border would be well advised to take a little trouble to learn about what they are going to see on the way. An endless expanse of thorny scrub and sand, of grassy plain, or of sudd, can easily grow tedious. But as soon as one begins to know something of the people, and their pursuits, of the animals and plants to be seen, and of the history of the country, tedium gives way to a curiosity which it would take more than one journey to satisfy.

The course of the Nile and its sources constituted one of the last and biggest of the geographical problems of the world to be solved by the courage and curiosity of the European. As one steams away from Khartoum on the broad expanse of the White Nile, one remembers that this was the view that Baker, Gordon and Emin Pasha all saw when they sailed into what was then an almost unknown land, in the 60's and 70's.

One is reminded of them again when one reaches the extreme limits of the Sudan. We see the ruins of Gondo-

koro, where Baker stayed in 1860 before making his dashing march into Uganda and discovering the Albert Nyanza, and where a few years later (1868-70) he built a station (Ismailia) and, as the representative of Ismail Pasha, tried to bring peace and order to that unhappy country. We see Lado on the opposite bank, where Gordon set up his station when he succeeded to Baker's command, and where Emin continued the work of both of them in his own queer way, for he was much more of a scientist than an administrator, and in a wonderful series of letters described the plant and bird life of this little known region.

But to return. For the first two hundred miles of the journey, that is to about Kosti where the railway from Sennar to El Obeid crosses the Nile, the country on either side is settled by Sudanese Arabs.

After this point they become scarcer, and are only to be seen in occasional settlements on the banks, where they do a little trading or cut and bring wood for the passing steamers. These *mulakias* or Muhammadan settlements have a bad name for a low standard of life

Blue Nile Bridge, Khartoum.

S.S. OMDURMAN ON THE WHITE NILE.

and seem to collect the dregs of the Northern Sudan and of the pagan South.

For the next 400 miles, roughly from Jebelein to Lake No, Shilluks inhabit either side of the Nile. They are tall, reserved and occasionally handsome. At Kodok or Malakal, the headquarters of the White Nile Province, they can easily be studied. They come in from the neighbouring villages, armed with their two long spears and their pipe, and buy a little sugar in the suk or market, or watch the steamer and its passengers. They are, so far as we can know, a proud and self-conscious people, who have stood up bravely to the attacks of Arab and Turk, and cherish a history which goes back somewhere into the 16th century.

Kodok, of course, hides under that inoffensive name the ominous word Fashoda. It was here that the French saw their dream of an Empire stretching from side to side of Africa crumble in 1898.

Shortly after Kodok the mouth of the Sobat is passed on the left-hand side of the river. It leads up through Shilluk country at its mouth into a grassy marsh land inhabited by the Nuers, who have lately given the Government trouble.

At Lake No one enters the last stretch of the Nile—the Bahr el Jebel—or river of the hills, for 400 miles further south the country will become hilly, and for the first time since the steamer left Jebelein (the twin hills) will anything that can be called a hill be seen—the rounded mass of Jebel Lado, and the conical point of Rejaf.

But before these welcome hills come into sight there is a long, and it must be admitted, tedious voyage through the sudd, the great marshy area stretching from Lake No to about Bor.

As far as one can see there is a sheet of papyrus and marshy grass, with here or there an occasional palm tree,

or by the bank the miserable huts of the riverain Dinka.

At Malek on the left bank of the river stands the headquarters of the C.M.S. mission to the Southern Sudan, where an excited group of Dinka boys, some of whom speak and write English in a way that would surprise a traveller, turn out to welcome the steamer. By that time the steamer has emerged from its narrow, tortuous passage through the sudd and completes the remainder of its journey rapidly. At Mongalla, the headquarters of Mongalla Province, there are the usual government buildings, some companies of the Equatorial Battalion, and a Zoo, where most of the small game of the district may be seen. The inhabitants of the Nile bank from here to Rejaf are Bari, a tribe which won an unenviable reputation for savagery from the early explorers, but which now, much reduced by famine, cattle-plague, and slave-raiding in the old days, is peaceable and even spiritless. In the old days both men and women covered themselves with brick-red oil, and the women still do so and look much the colour of the inner tubes of motor tyres. It is interesting to note that this people is in language akin to the famous Masai, the fighting people of East Africa.

The Province capital Mongalla is soon to move to Juba, a site some 60 miles further south, at present a C.M.S. school for boys from all parts of the Southern Sudan. With the new capital, which will also be the terminus of the steamer line, an extension and improvement of communications with the Congo and Uganda may be expected. Whether the Upper Nile, which has been a cul-de-sac for centuries will ever "develop" is more than doubtful. It may and probably will be the route for goods and machinery going into the Congo; it may grow a certain amount of rain-cotton.

But it will ever be the home of a sturdy primitive life with more than one lesson to teach the sophisticated European.

An Early Morning Excursion

BY JAMES HENRY.

Ancient Sennar.

The hamlet of Sennar on the Blue Nile achieved greatness some three years ago by giving its name to the world's then largest dam, which regulates the irrigation of the island between the Blue and White Niles and has converted what was so recently a desert into a prosperous and very important cotton-growing area.

Though nowadays its glory has departed, Sennar can boast a not inglorious history. In ancient times it was under Egyptian and Ethiopian influence and embraced Christianity at an early date. During the latter half of the first century B.C. this part of Africa was conquered by the Romans and a garrison was stationed at Sennar, but

this was soon afterwards withdrawn. The seventh and eighth centuries saw an Arab invasion, with the result that Christianity gradually died out and the indigenous inhabitants of the country—the Fungs—a mixed negroid race, allied with the Arabs, assimilating their speech, religion, and customs, had established by the fifteenth century the powerful kingdom of Sennar, which by the eighteenth century ruled a large part of the eastern Sudan. From this high-water mark there was a decline, until in 1821 the kingdom was overthrown by Egypt, and Sennar is now a province of the Anglo-Egyptian Sudan.

Sennar is to-day of practically no commercial nor political importance and sees an Englishman once a month or

so, when the District Commissioner comes to try a case or to assess taxes, or a railway official pays a visit of inspection. It is just south of the flourishing cotton belt and just north of the gum and cattle country and, though on the railway, is merely a change-engine and watering station, while even its former importance as a point of transshipment from river to railway has lapsed, as the quay for the Blue Nile steamers is now on the other side of the Dam and some four or five miles away.

Nevertheless a visit to Sennar is well worth while, for there are to be seen—imagine it in this part of Africa—the ruins of the old Roman camp, and, what is almost as incongruous in the northern Sudan, a large monkey forest!

The Ferry at Sennar.

Leaving the railway station, you pass a colony of charcoal burners, and, traversing the market-place, arrive at the ferry across the main irrigation canal. The charcoal burners are well known and send their produce as far afield as Khartoum, nearly two hundred miles away, while the market is typical of a small native village—being a quadrangle of shops and booths with the enclosed courtyard piled with heaps of grain and country produce. The ferry is quite interesting and often amusing; for it is nothing more than a small and primitive raft, and your companions are natives of every grade, with a good sprinkling of donkeys, camels, sheep, and goats, while it may well be that you will encounter a whole family moving house, with impedimenta of pots and pans, beds and drinking vessels, loaded chaotically on donkeys, and the women folk hidden beneath "Howdahs" perched precariously on the backs of bullocks or camels.

Roman Remains.

Leaving the canal, you strike a track that leads you to Old Sennar, as the Roman camp is called, and the monkey forest. Hear you feel that there is a strange meeting of east and west, of old and new, for on one hand is the river, the Nile mysterious, omniscient, and old as time, and on the other the canal, and yet you realise that there is nothing new under the sun, for the Egyptians were building irrigation canals six thousand years ago, and Father Nile, as is his custom, seems to brood and smile, rather cynically perhaps, for he has seen it all before, though it cannot be as anomalous to observe derelict steam dredgers and the weird relics of contractors' machinery.

Old Sennar is finely situated on a cliff overlooking the river, and the site was obviously selected by one who knew where to establish a fortified camp. There is unfortunately nothing of the old Roman city now standing; but as at Roman sites in England, so here, the dispositions of mounds and fosses enables you to trace the walls and to form an estimate of the size and configuration of the old town; but whereas at, say, Caerleon, everything is buried beneath several feet of earth, here there is but a light covering of sand, and amateur exploration is both easy and exciting. Half an hour's scratching about in the mounds is almost always amply rewarded by a find

of a few beads or bits of pottery, and such good luck naturally adds to the enjoyment of the excursion.

This is a side of our character that natives find so hard to understand, and it amazes them that Englishmen "will go anywhere to see anything old!" though their idea of age is rather nebulous, and if you ask them how old a thing is they will reply: "Oh very, very old, before the Khalifa's time!"

A Monkey Forest.

The monkey forest is about a mile farther on, and its approach is like a London common, consisting as it does of bushes and small trees, only that grassy walks and rides give place to sandy tracks. On the road you meet strings of camels tied head to tail and laden with wood that has been cut in the forest and which is carried in crudely-fashioned panniers. As many as a dozen camels are commonly thus roped together, the column being as often as not in the sole charge of a very small but quite capable native child, who gravely salutes you.

The forest proper is an ideal home for monkeys, for from all the trees hang down to the ground tendrils like ropes in a gymnasium and the upper branches interlace forming a perfect playground. The monkeys, of which are to be seen hundreds, generally in parties of twenty or so, are small grey ones, being about three feet high, and although the forest resounds to the blows of the woodcutters' axes, they never go very far away. They are to be seen playing on the ground like rabbits, but on catching sight of you, they scatter like squirrels or lizards, climbing the tendrils with incredible agility and running about on all fours in the tree tops, making a noise above your head like rats scampering over the ceilings in an old house.

The natives sometimes catch them by the simple expedient of making them intoxicated. They place on the ground pots of beer made from millet, which the misguided monkeys drink and which makes them so sleepy that they are easily captured.

The excursion above described can be accomplished comfortably in three hours, the best time being in the cool of the early morning before breakfast, starting at daybreak. To men folk it is no hardship to walk the

Ruins at Old Sennar.

whole distance, though it is advisable that any ladies in the party should be mounted on donkeys.

A very enjoyable feature of the walk is the wonderful bird life of the Blue Nile. There are to be seen millions of demoiselle crane and sand grouse, and flights of geese and teal, all of which afford in the season wonderful sport, and are excellent eating, while in the forest itself are found birds of beautiful and brilliant plumage, the loveliest, and one of the commonest, resembling a magpie in orange and kingfisher blue.

SERVICE ECONOMIQUE of the LEBANON

Modern means of rapid communication, due mainly to the motor car, have made Lebanon, the sacred mountain of myriad memories, pre-eminently the health and pleasure summer-resort of Egypt and Palestine, and lately also of Iraq, through the short desert route, and have brought it more within the programmes of foreign tourist agencies.

It is moving with the times, and, thanks to official supervision and help, it is able to cope with the new conditions. Existing roads are being improved, main arteries, leading to famous historic sites, are being asphalted, and new roads are being built. Pure water is drawn through pipes, and electric plants are being installed in the chief centres. Hotel accommodation approaches nearer to modern standards, and local attractions are encouraged.

With their varying altitudes, the different centres furnish all the necessary conditions for those seeking health on medical advice. As a few examples may be cited ; SOFAR (4,090 feet above sea-level), 1 hour by car from Beyrout, with its fine residences and Hotel Casino, overlooking the Hammana Valley, immortalised by Lamartine ; AIN ZHALTA (3,925 feet above sea-level), 1 hour 45 minutes by car, between the two famous sources of Safa and Baruq, its cedar forest nestling in the higher chain behind it to the East, and its wide luxuriant valley glowing with a rare variety of rock tints ; ALEY (1,960 feet), 40 minutes by car, the most popular resort ; BEIT MERY and BRUMMANA (2,620 feet), 45 minutes by car, with their wealth of pine groves, commanding the most brilliant panorama of sea and land, and a host of other equally attractive centres in the South and North, such as JEZZIN, HASRUN and EHDEN, and the IMMEMORIAL CEDARS, now reached by car, with an up-to-date hotel near the Sacred Grove.

BEYROUT MUNICIPALITY

BEYROUT, the principal port of the Eastern Mediterranean, promises, under the enlightened direction of its present Municipal Council and Director, to become the Paris of Syria and the Lebanon.

Its new features are :—

The Square, transformed into an elegant garden.

Its rich handsome buildings (including the Municipal Blocks), lining the wide new streets cut through the old city.

Its fine asphalted boulevards, with the National Museum to be erected along the principal artery, Rue de Damas.

An up-to-date theatre facing the Etoile, projected by the Municipality in the middle of Allenby Street.

SYRIA

Recent Developments

The Appearance of Beyrout.

To those who knew Beyrout before the War, and what losses in life and property it suffered during the struggle, and who have heard, later, of the difficulties of the French in the early exercise of their mandate and of the devastating effects of the Syrian revolt, the air of opulence which the town now presents and the intensity of the traffic in its principal thoroughfares appear somewhat puzzling. But the very security of its position has caused it to profit

New Square, Beyrout.

by the revolt, and to thrive on the woes of the interior. Hundreds of families from Damascus, Homs, Hama, and Aleppo then flocked into the capital, and, at one time, in such numbers that the overflow of its limited housing accommodation had to drift into the suburbs and neighbouring towns, such as Jounih and Hadeth.

On the other hand, the influx of about 30,000 Armenian refugees, and the presence of part of the French troops of the Armée du Levant with their officers and families, and of a not inconsiderable number of civil officials, have been so many adventitious factors of such rapid growth and increased activity. Furthermore, the discovery of the desert route to Baghdad has created an undreamed-of transit traffic of passenger and goods to Iraq and Persia, which has helped to counterbalance the loss of the transit trade with Turkey, Palestine, and Trans-Jordan, brought about by the post-War political changes.

The new features that strike most the visitor to Beyrout are the elegant garden in the square, once known as the Place des Canons, with its pond of violet-coloured glazed tiles, in the centre of which a tall jet of vapoury water is displayed at certain hours of the day, and the rich, indeed, too rich, buildings, several storeys high, that are being put up along the wide streets, which had been cut through the old city by the Turks during the War, and left with mounds of debris for the newcomers to clear away. Many of the old buildings had been expropriated by the Municipality of Turkish times, and paid for in bonds. The Municipality has since redeemed some of these bonds and caused to be built on some of the sites large blocks for its own and Government use.

Motors and Roads.

The advent of the motor car in unexpected numbers (there being no fewer than 3,446 automobiles in the Lebanese Republic) has caused an alarmingly rapid deterioration of city and provincial roads, which drove the authorities, in their desperation, to seek a solution. Most of the stone available in the country is of a rather friable nature, which withstood well enough the vehicular traffic of pre-motor days, but could ill stand the automobile, and less so the heavy truck, especially of the military type. At first, the municipal authorities tried a hard black stone, but the supply was hardly sufficient for paving a few streets, and finally the asphalt covering was thought of, and, once tried successfully, it is now being extensively used for both city and provincial roads. It has been found to be, in the long run, much more economical. First attention is being given to roads used by the tourists and summer visitors, the Beyrout-Naqla, Beyrout-Damascus-Baalbeck and Beyrout-Tripoli roads; and the Shell (Syria) Co., Ltd., is reaping a rich harvest, as it supplies the material, and provides also technical aid. On the section Beyrout-Naqla, already about one-third is asphalted; on the section Beyrout-Damascus, the asphaltting up to Sofar is completed; and on the section Beyrout-Tripoli the asphaltting to Antelias is finished. On the Damascus side the asphaltting has been done up to Doummar. The new road to the Cedars of North Lebanon was lately inaugurated, thus saving the visitor the rough trudge on foot, or horse or mule back from Bsherré to the Sacred Grove. One of the important new roads, for which the French deserve most credit, and which will prove useful from both the

Beyrout: Rue Allenby, under repair.

economic and the touristic standpoint, is the one lately completed between Latakia and Aleppo. If it was calculated to serve a strategic purpose, it is none the less a praiseworthy achievement.

In order to reduce the risk of accidents, sharp curves, especially on the steep mountain roads, are being broadened and made more fit for automobile traffic. In the towns, at congested crossings, the street police are gaining efficiency in regulating the traffic.

G. & S. NASSAN and Company, DAMASCUS

The NASSAN factory and showrooms in Bab Sharqi figure on the programme of sights for the visitor, along with the historic monuments of Damascus, such as the Mosque of the Omayyads, Saladin's Tomb, etc. :: :: ::

All kinds of oriental furniture in copper and wood, as well as woven materials of the most gorgeous kind, are to be seen in bewildering profusion in the showrooms :: ::

Men and women are on view making silk and woollen carpets and rugs, carving copper and inlaying it with silver, also inlaying wooden furniture with minute pieces of ivory, ebony, rose wood and olive wood. It is a work full of fascination and wonder.

Train connects with daily motor car services Haifa-Beirut and twice weekly service to Baghdad; also *vice versa*.

Restaurant and Sleeping Cars are attached to these trains. Sleeping Berths may be booked in advance at the Offices of the International Sleeping Car Company, Cairo Station, Kantara Station, Haifa Station, and Messrs. Thos. Cook & Son, Limited, Jerusalem. Comfortable day and night saloons available at reasonable charges.

Railways.

The French railways suffered grievously during the War and the Administration, which sought for several years after the Armistice to recuperate its losses by somewhat exorbitant tariff rates, has lately inaugurated a less selfish policy by reducing some of the passenger and goods rates, and increasing the number of trains, and appreciably improving the speed of those running on the express services. The recent connexion of the quick services with those of the Orient Express at the Turkish frontier is expected to lend a stimulus to the overland passenger traffic, and to the tourist traffic as well.

The Trans-Desert Route.

Only a passing allusion can be made to the trans-desert route between Beyrout and Baghdad, as the subject, to be properly dealt with, would require a special article. For the present the Nairn Eastern Transport Co. (an amalgamation of Nairn and the Eastern Transport Co.) holds the field for passenger traffic on regular schedules.

Much of the progress made so far, such as the installation of electric plants, some under water power, and the supply of pure water through pipes in the principal summer resorts has been due to private initiative. It would seem that the Mandatory Authorities have thus far refrained from lending more than platonic aid to big economic schemes, pending the complete settling down of political conditions. Now, however, that traces of the revolt are no longer discernible, they are beginning to show their hand. They have just released 400 thousand Lebanese gold pounds, representing the remaining share of the Lebanese Government in the Customs receipts so far held at the Haut Commissariat; but on the express condition that these amounts shall be used exclusively on schemes of a productive nature. It is said that they will be devoted chiefly to irrigation schemes already studied, and the vital importance of which has been demonstrated by the last two years of consecutive drought, which spelt ruin to the grain crops, and compelled the country to import tens of thousands of tons from the great grain-producing countries of the world. One of the schemes relates to the Yammuni Lake, which involves the cutting of a tunnel 3 kilometres long, and in the surveying of which the French Aviation Camp at Rayak is lending such valuable help. Furthermore, the imminent understanding with the bondholders, on similar terms as the Turkish settlement, will also be releasing important sums derivable from the revenue hitherto collected by the Ottoman Public Debt Administration. It is said that these amounts will be assigned in great part to the vast programme of road asphaltting.

It is confidently hoped that, as political conditions show signs of further stability, foreign financiers will no more manifest the same shyness in investing capital in the mandated territories.

Improvements at Beyrout.

Meanwhile, the outward signs of prosperity and progress are more in evidence at Beyrout, the gateway of Lebanon and Syria. It has already some of the distinguishing features of a modern city, although it was like an overgrown village in Turkish times. It has now wide, well-laid streets and boulevards, stately buildings, and an up-to-date theatre; and it is shortly to have a drainage system, and an imitation of the Etoile of Paris, the centre of which will be the middle of Allenby Street; and a National Museum to house the treasures already unearthed by the various archæological missions.

French Initiative.

The improvements due entirely to French initiative and capital are (a) the filling up of that part of the sea to the east of the Beyrout harbour (as part of the larger plan of the enlargement of the basin, involving the extension of the stone jetty (breakwater) which is to be proceeded with in sections), which is to provide quay accommodation for steamers of fairly large tonnage, and enable passengers to

land without the medium of boats and tenders: also adequate space for erecting a Customs House, as well as offices for the Health and Light Administrations, more worthy than the present ones of the enhanced status of the port; (b) the improvements on all the railway lines already referred to; (c) the establishment of an air line between Marseilles and Beyrout by the Air Union, Ligne d'Orient; (d) the policing of the large desert tracts, and especially those crossed by the automobile convoys to Iraq; (e) archæological research in various important historic sites, in some of which, such as Byblos (Jibeil) and Mishrefe (Qatna), startling discoveries of supreme scientific value were made.

Air Mail Services.

It is now over three months since the Air Union, Ligne d'Orient, started a tentative service, accompanied by the reconnoitring of the Syro-Lebanese coast, in which the Naval Division lent its help. This was carried out by two hydroplanes, Syrie and Provence, which have already made the flight successfully from Marignan (near Marseilles) to Beyrout and back, calling *en route* at Naples, Corfu, Athens, and Castellorizo. Two more

The Old and the New.

powerful hydroplanes of the Cams type are in course of delivery, and once a fleet of four hydroplanes is in commission a postal convention will be signed for the maintenance of a weekly postal service to be started early next spring. The carriage of mail is the chief object. The relay system will be adopted; the hydroplane on its arrival at a hydroport will deliver its load to another hydroplane kept in readiness to take over, and continue the flight. This will reduce the strain on both the pilots and the machines, but will require a larger number of hydroplanes. An understanding is said to have been reached between the Air Union and the Imperial Airways for the carriage of part of the Indian mail to a point on the Syrian frontier to be mutually agreed upon. It is contemplated to extend the service to the Far Eastern French Colonies, in collaboration with the Imperial Airways.

Owing to the limited space inside Beyrout harbour, most of the time crowded with steamers, the hydroplanes will have to alight in the open sea. As the weather conditions there are not very favourable at certain periods of the year, and owing, moreover, to the rather high cost of land required for a large shed and workshop, it has been decided to make of Beyrout only a secondary port of call for the delivery of mail only. The chief hydroport has been chosen at a point near Tripoli.

The French authorities will be granting the Air Union a subsidy, to which the Lebanese Government will make a certain contribution.

Latakia and the Alaouite State

The recent opening of a trunk road from Latakia to Aleppo marks a further stage in the linking up of the internal communications of the different States of Syria. Already there existed a metalled road between Beyrout and Latakia along the coast; and the two highways are so well made that it is now possible to proceed from Beyrout to Aleppo, a distance of some 250 miles, by that route in one day. Latakia is the chief town of the Alaouite State, which is a little island of direct French administration in the sea of the autonomous Governments of Syria and the Lebanon. It has progressed remarkably during the last few years under this form of administration, in which politics do not act as a brake upon progress. Before the War it was a small port, important only for its trade in tobacco, but almost entirely cut off by land from the rest of Syria. Now, in addition to the two trunk roads linking it with Beyrout and Tripoli on the south and Aleppo on the east, it is connected with the hinterland by a number of good motor tracks. By the side of the old Turkish city a new town is being laid out with wide boulevards, a promenade along the sea, a casino and a spacious Government Office (Serai); and

there is talk of a new and more modern harbour being built, which will be accessible to steamships.

Tobacco is still the principal agricultural product of the district; but the cultivation of cotton is being energetically fostered by the Government. Some 7,000 hectares have been placed

Castle of Masyaf. The Stronghold of the Old Man of the Mountains.

under cotton in the coastal zone; and an American variety is acclimatising itself well. Another new industry in the Latakia region is that of asphalt. A concession for 75 years has been granted to work asphalt deposits in an area of nearly 5,000 hectares to the east of the town; and with the enormous development for motor roads in Syria and the Lebanon the local demand for the product will be large.

Latakia, which inherits the name and site of one of the great foundations of the Seleucid Empire, Laodicea ad Mare, is entering on a new era of expansion. The whole Alaouite country around it is likewise being opened up, both for the inhabitants and for the tourist. Even in the storied East there is scarcely any region which is so interesting historically and so romantically beautiful as that which now forms the State of the Alaouites. It is a small enough country, with less than a quarter of a million inhabitants; but within its boundaries are crowded diverse civilisations and a medley of races and religions. Apart from Latakia, the only other town which it comprises is Tartous, the Tortosa of the Middle Ages, which was the last Eastern stronghold of the Crusaders. The town still retains its mediæval walls and a perfect specimen of a Norman Church, impressive in its gauntness. A few miles out at sea from the town lies the Island of Ruad, the old Aratus, which was one of the centres of Phœnician maritime power, and to this day is populated by a hardy, vigorous race of sea folk. The island, it may be remembered, was occupied during the Great War

by the Allies and used as a centre of the Intelligence Service for the coast of the Eastern Mediterranean.

The population of Latakia and Tartous consist in the main of Sunni Muslims, with a minority of Christians. The population of the hinterland, however, is largely composed of the strange sect of the Nossairis, or, as the French call them, the Alaouites, the followers of Ali, who represent a remarkable amalgamation of pagan, Arab and Christian religious ideas. The country comprises also another curious survival of religious syncretism, the Ismailis, who are the direct descendants of the Assassins of the Middle Ages, and, still occupying their mountain fastnesses, retain in them their secret cults and beliefs. The spirit of the Old Man of the Mountains broods over the ruined castles of Kadmus, Masyaf, and Kaf, around which the villages of the Ismailis are grouped. If they are no longer devotees of the hashish, from which it is supposed they derive their mediæval name, they still maintain fiercely their independence and isolation.

The whole country is studded with mediæval castles, partly Saracenic and partly Crusader; for it was in this land of mountains and gorges that the most romantic episodes of the

mediæval conflict between East and West had their setting. Two great strongholds, in particular, survive in almost perfect preservation on the top of their impregnable hills—Merkab, or the Watch Tower which stands on a cliff some 1,500 feet above the sea midway

Tartous (Torosa): Crusaders' Church.

between Tripoli and Latakia; and Kalaat El Husn, or in its French name Krak des Chevaliers, which dominates the road between the coast at Tripoli and the town of Homs, that was the starting place, as it is to-day a stage, of the desert road to Iraq. Both these fortresses sheltered until recently a large village; and though most of the former inhabitants to-day have preferred to build their houses below the fortress, there is still the accommodation for thousands of men and horses in the vast silent spaces of their halls and crypts and stables.

Scarcely less remarkable is the Castle of Sahyoun, some twenty miles to the east of Latakia, perched on an island rock surrounded by precipitous ravines, which is one of the most perfect survivals in the East of a Frankish chateau. Besides these relics of the ages of Chivalry, the mountains of the Nossairi country are crowned on every prominent hill by a Weli, or Shaikh's tomb, bright with its whitewashed dome, that commemorates a local Saint; for it is one of the distinctive characteristics of Nossairi worship to maintain these local cults.

The Alaouite country is rich then with the memorials of ancient and mediæval history and with the living and picturesque survivals of those religious amalgamations which, throughout the ages, have marked this portion of the Orient. Its isolated gorges and passes, hitherto accessible only to the daring traveller, are now being opened to the passing tourist; and the Frank again mixes and exchanges culture with the Oriental.

London to Baghdad

Via Stamboul—Aleppo—Darbisiyah—Mosul

This route from Europe to Iraq is well known to the officials of the Iraq Government, especially to those of the northern Liwas, but to Iraqi and European business men and to tourists it is hardly known at all, and it is for the latter categories this description is written. Anyone can go to the tourist agencies in London or Paris and purchase a through ticket entitling him to travel by the Simplon-Orient Express service (including food in dining cars) to Stamboul and thence for travel *via* Aleppo to Tripoli by train, from thence by motor to Haifa and on to Cairo by rail. For passengers travelling to Iraq there is a choice of routes from Aleppo, the quickest and most direct being to proceed by train to Darbisiyah and from there by motor to Mosul.

The passenger for Iraq entrains direct from the cross-Channel steamer from Dover into the Simplon-Orient Express at Calais, and after three days and four hours' travel in luxurious coaches and sumptuous dining cars, detrains in Stamboul. Only one night need be spent in

year. The portion of the journey from Darbisiyah to Mosul is done in a motor car and occupies eight hours.

The total time spent on the journey direct from London to Mosul is seven days and eight hours, and the cost is approximately as follows:—

1st Class ticket London-Aleppo	...	...	£24	10	1
Seat London-Dover	...	...	0	1	0
Seat Calais-Dover	...	...	0	2	0
Sleeping berth Calais-Stamboul	...	...	7	10	5
Sleeping berth Haidar Pasha-Aleppo	...	...	4	10	0
Meals <i>en route</i>	...	...	2	10	4
Hotel in Stamboul (one night)	...	...	1	10	0
1st Class ticket Aleppo-Darbisiyah	...	...	3	0	0
Seat in car Darbisiyah-Mosul	...	...	3	0	0
Passport visas whole journey	...	...	3	1	6
			£49	15	4

Note.—By travelling on a "Mixed Class" ticket, i.e., 1st Class London to Trieste and 2nd Class Trieste to Aleppo, the cost is reduced by approximately £8.

NINEVEH.

Constantinople, if speed is necessary. The Bosphorus is crossed the following morning by one of the ferry steamers to Haidar Pasha, and there the traveller again entrains in another comfortable Wagon-Lits at 9 a.m. and detrains at Aleppo at 6 a.m. on the morning of the third day, a run of 45 hours. The journey from Aleppo to Mosul at the time of writing is not as luxurious as that from London to Aleppo, but it is quite a comfortable one. It is, however, anticipated that the Wagons-Lits service will be extended to Darbisiyah or even to Nisibin next

Calais to Stamboul.

From 11 a.m., the first day is occupied in travelling from Victoria Station of the Southern Railway to Dover, thence by fast steamer to Calais, where on the wharf a train awaits with a coach or coaches marked "Calais to Stamboul." The berths in such coaches are labelled with the names of the passengers who have booked through. Other cars are marked for various destinations less distant from Calais than Stamboul.

The journey is then continued to Paris, which is reached

at 19.25, and, after a halt of one hour and ten minutes, is resumed. During the stay at Paris opportunity may be taken to dine in the Station Restaurant or in one outside; or dinner may be had in the dining car on the train. The train passes over the French frontier at Vallorbe in the early hours of the next morning and at about 7 a.m. it enters the Simplon Tunnel near the Swiss frontier and emerges later in Italy. The run through this country is very beautiful, and Milan, Venice and Trieste are points of interest seen and passed. The following morning one awakes in Yugoslavia; late afternoon finds one passing into Bulgaria, and the following morning at 6.40 Turkey is entered, Stamboul being reached at 15.40.

If passengers *en route* to Iraq are wise, they will have their passports visé for transit through Turkey, otherwise they will find it difficult and costly to get a transit visa to enable them to proceed next day. Passports visé for transit are taken from travellers in the train before arrival at Stamboul, and a receipt is given in exchange, with the intimation that on presenting the receipt, passports will be returned at Haidar Pasha at the time of departure for the south.

The trains from Haidar Pasha to Aleppo run on Mondays and Fridays only; so if it is desired to spend a whole day in Stamboul the Sunday's or Wednesday's train from London should be taken, so as to arrive in Stamboul, on Wednesday or Saturday, to spend Thursday or Sunday seeing the many places of interest and beauty, and to proceed on the journey on the following Friday or Monday.

The journey as far as Stamboul is over a very old railway route and one that has been used for many years by the business men of Europe; but the onward journey to Aleppo and thence to Tripoli and Palestine or eastward to Iraq and Persia is much less known.

To those who travel south from Haidar Pasha for the first time the beauty of the country passed through is a revelation, and the interest raised by seeing places, the names of which were brought prominently to notice by

the Great War and later by the Greco-Turkish War, make the daylight hours of travel all too short.

Haidar Pasha to Eskişehir.

The trains which leave Haidar Pasha on Monday and Friday mornings at 9 a.m. consists of Wagons-Lits labelled for Aleppo and Tripoli, with ordinary first, second and third class carriages in addition.

As our party settled down in such a train one Monday morning in early October, we found ourselves leaving the City behind and running into the suburbs, where the line closely follows the shore of the Sea of Marmora. On one side we had the brilliant blue water of the sea carrying shipping from many parts of the world, parts of the Turkish Navy and also the local fishing and trading boats. On the other side, on the slopes of a hill, we saw great numbers of suburban houses set in large gardens. The houses were of a type strange to us, as they almost invariably consisted of a lower story of stone and lime and an upper one of timber.

As the suburbs are passed through, prosperous farms take their place with their crops of maize, tobacco, and fruit trees heavy with apples, quince, chestnuts, walnuts, vineyards with ripe fruit, and patches brilliant with the green foliage and red of capscums. The gardens and farms all have small canals to carry the water to the varying levels, and these canals are bordered with weeping and ordinary willow trees. In about an hour and a half the Sea of Marmora was left behind, and shortly after we found ourselves being carried past a large lake, the banks of which were lined with orchards, and at a station near the eastern end we purchased a large basket of beautiful and excellent eating apples.

The railway then runs through a valley, gradually closing in, until it is a narrow gorge, and the line climbs high up the hillside and runs through many short tunnels. Away down in the gorge a new township is being built on the bank of a considerable river; valley and plain follow on valley, hillside and plain with gardens and

FAST PASSENGER & GOODS SERVICE TO AND FROM ALL PARTS OF IRAQ.

The quickest, cheapest and most reliable means of transport for all classes of goods between Basrah, Northern Iraq and Persia.

orchards everywhere. A stop was made at Karachu at 5.25 p.m. to attach an additional engine to enable the steep climb from a valley over a hill top to be negotiated. As the train mounts upward we see a sight reminiscent of the War and its waste; lying on the steep hillside, some close to the line and others far down, are a great number of giant locomotives thrown there in some colossal smash. The line runs through deep rock cuttings and through gorges, narrow and tortuous in the ascent to the hill top.

The divide was crossed at 5.55 p.m. and we then ran down into yet another valley through scenes of farms and crops similar to those we had just passed, but the changing views of steep hillside, opening valley and rushing rivers maintain the interest all the time.

As the sun was setting we saw ahead of us a great glare of electric light which made us think we were approaching a large modern city, but soon we saw that the lights were those of a huge new saw mill, and, as we passed it, we could see the great sheds where logs of pine wood were being cut up into scantlings, and great stacks of cut timber were being loaded into trucks for despatch to markets. An aerial railway stretched away over the mountain to bring in the logs from some distant forest. About two miles on the train stopped at Bilejik Station, a largish place with a prosperous look. Darkness then overtook us, and an hour later found us at Eskishehir, the junction for Angora.

The composition of the train was altered considerably here, some coaches were detached and others attached, the train, however, proceeded with a greater load of passengers than it had on arrival. Shortly after we left Eskishehir dinner was served, the attendants prepared the beds and we settled down for the night.

Next morning at 8 a.m. we reached Konia, a large important town with a prosperous-looking people. Round the station and on the main streets large shade trees gave the place a well-cared-for appearance.

The change from Turkish to Roman characters is rapidly taking place. Already most of the station names, as far as we had come, had been altered, and those that had not had the names in the Arabic characters blocked out and the spaces ready for the new names.

The Taurus Range.

Leaving Konia, we entered on a stretch of wide plain with hills bounding the view to the east and west. The western hills nearest to the line have an extraordinary metallic lustre. The plain is cultivated, and must produce great quantities of grain; this year's crop, however, had all been reaped, and ploughing for the next season's crop was in progress. Four hours after Konia has been left, the hills begin to close in and the line rises rapidly, as we are now approaching the Taurus Range. At 2 p.m. we run down a long incline with many curves to approach Ulukishla, a newly-built town which nestles in a valley. Here we saw a large number of motor-cars and buses waiting to take the passengers who alighted there to their homes. The town was beflagged, and a great proportion of the population was on and about the station to welcome some high official.

The view from the train from here onwards is very interesting, as the line winds and climbs through narrow valleys, up hillsides, through short tunnels, and deep rock cuttings, always close to or above a swift running, but at present small, stream, which must be an imposing torrent when rain falls on the steep hillsides. The approach to Bozanti (the Cilician Gates of the ancients), reached at 3.30 p.m., is increasingly interesting. It is indeed wild rugged scenery, the line running along one side of a deep valley, the opposite side of which is closely bounded by hills wooded with fir trees, as high as one can see; beautiful valleys open into the one we are in, and we can see, far up, pleasant-looking farmhouses among a wealth of trees and green fields. The valley narrows till there is not room for both river and rail,

and for a long stretch the railway has to burrow its course through the rocky hillside. The valley then opens out again and the line emerges from a series of tunnels, and runs along the riverside again, now bordered with a thick fringe of Chenar trees. The less steep hillsides now seen have been denuded of fir trees, and the stumps show that men took away their beauty and have made no effort to replace it by planting young trees.

We reached Karapounar at 16.20. Here is seen the commissioned officers to the humble and badly-equipped site of a great base for the operations for the gigantic task of tunnelling through the Taurus Range just ahead. Great quantities of material and plant are spread over a large area. The trucks, engines and machinery have served their purpose and await the scrap merchant to take them away.

The valley from here on is so narrow that the only way of progress was to tunnel and rise up to and over the great range. The tunnel is not quite continuous; as the train rushes through, it emerges frequently for a few brief seconds on the hillside, and one gets a glimpse of a deep narrow gorge, the bottom of which cannot be seen. At some of these short intervals between sections of the tunnel, ranges of workmen's quarters can be glimpsed clinging to the steep hillside just below the line. As we climb upwards the tunnel becomes continuous, and in places of openings in the hillside, short tunnels have been cut through to the side of the valley, admitting glimpses of daylight as we pass. Those openings provided air and a means of disposing of the rock spoil from the tunnel. The time occupied in getting through the tunnel was 18 minutes, and the train emerged into daylight again at Hajikiri. Here we saw that a station had been built on a great artificial flat area which was formerly another base of operations for the construction of the tunnel. The exit from this great work is at a height of 4,816 feet above sea level, and the view from this eminence is truly wonderful. The station is sited on the mountain side, round curves of which the track has to descend. Almost in front and a little to the left is the great cut in the rock which was made by Alexander the Great to allow his army to make a rapid descent to the plain. A picture of this famous work is reproduced on the 2½-piastres Turkish stamp now in use.

All the passengers in the train alighted here to get a better view of the wonderful scene. Far away across a great horse-shoe shaped plain we could see the glacis of the railway bank on the opposite hillside. Entraining again, we swept round the hillside, here and there running through tunnels to avoid the steeper parts, the line gradually descending from the great height, but it was an hour before we reached Kebil, on the opposite side of the plain, and still far above it. The sun was setting as we continued our way down the hillside, and produced a scene long to be remembered. It was dark when we reached Yenidje at 6.45. After leaving this station arrangements for dinner and bed occupied us till we retired. The attendants wakened us early next morning, and we found the train running through the red-clay fields approaching Aleppo, at which place we arrived at 6 a.m.

Aleppo to Baghdad.

At Aleppo we learned that the train eastward to Darbisiyah and Mardin would leave at 7 a.m., and also that we would require to live on the country during the journey, so we procured bread and fruit and bottles of aerated waters hastily before the time of departure. For the present the Wagons-Lits comfort does not exist

from Aleppo to Darbisiyah, the last station in Syria open for passenger traffic in the direction of Mosul. The accommodation consisted of a compartment seated for eight persons, with dividing arm-rests. There was ample space in the racks and under the seats for our baggage, so we were not separated from it.

This part of the journey is a great change from that just completed. Instead of great hills and valleys, rushing rivers and tree-clad hills, we passed through a great rolling plain of red earth, bare of crops, but either ploughed or being ploughed for the coming time of sowing seed. The halts at stations were long and noisy, but always interesting by reason of the many different races of people and their costumes and manners. Our fellow-travellers were also of interest, the male portion were nearly all in uniform; smartly-dressed officers, ranging from a General down to the most junior, and from non-privates. Several of the officers had their wives and

the border into Iraq before mid-day, and an hour later brought us up at the first Iraqi Police Post named Uglat, where we found an excellent rest room with the ordinary necessities. Here we had many cups of tea and ate some of the fruit we had with us, and went on refreshed and cheered. The road is not any better than most desert roads, but we travelled along at a steady 20 miles per hour, and arrived in Mosul at 7 p.m. We found accommodation in rest rooms at the Club, and next morning continued our journey in a Chevrolet car to Kirkuk, taking Arbil on the way.

This new route to Iraq brings the tourist to the Northern Liwa, and enables him to see the city of Mosul, the ruins of Nineveh, and many of the places of interest in Northern Iraq, such as Shaikh Adi, Al Kosh and Dohuk. Then on the way south Nimrud, also Arbil on its great mound, perhaps the oldest inhabited city in the world, can be visited. Thence passing through Altun

KHADIMAIN: From the air.

children with them. The ladies, obviously Turkish, were young and stout and beautifully dressed in the most up-to-date costumes, and all were shingled.

We arrived at our destination—Darbisiyah—at 10.30 p.m., and, owing to lack of accommodation, had to request hospitality for the night from the officer of a French post close to the station. We were received with the greatest kindness and were given vacant rooms to sleep in. The following morning we secured a Chevrolet lorry for our onward journey—we arranged our trunks inside to serve as seats and put our other cases on the roof, and so proceeded on our last stage into Iraq. After 40 miles' run we came to another French post near to Nisibin, where we showed our passports and enjoyed tea at a local tea shop. Here we could have changed into Ford cars, but we decided that, as we were very comfortable in our oversized-tired lorry, we would remain where we were.

The journey onwards was uneventful, and we crossed

Kupri, built on an island in the Lesser Zab, Kirkuk is reached. This is another mound city and long a centre of the passing dynasties of history. From here a visit can be made to the excavations of Tarkaian, which within the past year years have opened up the history of a nation of which little was known, and which was apparently destroyed in 1500 B.C. From Kirkuk, the Iraq Railways take the tourist to Baghdad, the ancient capital of Mesopotamia, which is the object of visit of most tourists.

This is only a very sketchy description of a route by which to travel from the West to the ancient centre and cradle of mankind, but the journey must be experienced to realise its ease and comfort.

Between Desert and Sown in Iraq

By E. S. STEVENS.

Few people realize that Iraq has a splendid climate for six out of twelve months. Its winter is colder and more bracing than that of the Mediterranean countries and Egypt, and a few days of rain in the course of the winter are soon forgotten amidst the brilliance of the prevailing sunshine. And Iraq, lying as it does on the new air and desert routes to India and the Far East, is always "on the way to somewhere else." The long sea-voyage to India by the Red Sea may be avoided by going *via* Baghdad, which is now only eight to ten days from London; and how much more enjoyable it is to most people to travel by this enthrallingly interesting route than to endure the monotony and heat of a journey by sea.

The chief charm of Iraq is, perhaps, that it is not as yet tourist-ridden. There is a subtle distinction between the word "tourist" and "traveller," and it is to the "traveller," the man who abhors hordes and dislikes the well-worn track, that Iraq particularly appeals. Here, he will not find the obsequious dragoman and the rapacious swarm of blood-suckers that exploit tourists in countries where they have been for years the natural prey of these parasites. On the contrary, he will encounter

instead of by candle-light, the visit "there and back again" may be accomplished in a day. Within the same day too he can see the lonely mound and temple tower of Birs Nimrud (Borsippa), according to Arab legend the Tower of Babel, built by the hunter king; and Kish, declared by tradition to be the first Sumerian city built after the Flood, a site which has yielded priceless treasures during recent excavations. Nearer still are Aqerquf, the ancient Cassite city of Kurigalzu; Ctesiphon with its world-famous arch (all that is left of the once magnificent palace of the Chosroes); and the wide ruins of Selucia, where a German expedition is at present conducting interesting excavations. All can be seen by taxi from Baghdad in the course of a day.

To go to Ur, upon which the limelight of archaeological discussion has been turned so much during recent years, is well worth while even when the season's dig is over, and Mr. Woolley has gone back to expound his latest discoveries in London. As it is a station on the Baghdad-Basrah line, no special expense is incurred by those travelling to the southern city. Its big temple-tower, which rises like a landmark over the plain, can be seen

Najaf: "lying like a casket within its walls in the brown desert."

the natural courtesy of the unspoilt East; and, if the element of uncertainty enters at times into his programme, he will always find ready help and disinterested counsel. The Iraq railway officials, who are anxious to forward the cause of travel in the country, take the utmost trouble in arranging tours and giving advice to visitors, and will furnish motor transport where the railway is not available. Rest houses are being constructed in many out-of-the-way places where there is no hotel accommodation, and several of these rest-houses, as at Ur of the Chaldees and Hillah, have been running with great success for more than two years.

By what varied paths the stranger can travel in the land which has been called the Cradle of Mankind, and which recent discoveries at Ur have proved to be one of the earliest nurseries of civilisation! He must go, obviously, to Babylon—even the old rhyme takes us there, and when it can be done by taxi from Baghdad

from the station rest-house, which, be it noted, is also a good centre for visiting other ancient Sumerian cities in the same district, some as yet awaiting systematic excavation. There is so much buried history in Iraq.

As one goes northwards from Baghdad there are the great Assyrian sites; Nineveh, close to Mosul, where excavations have again begun; Nimrud, the ancient Calah, which contributed so many sculptures to the British Museum; the ancient capital city of Asshur, excavated before the War by German archaeologists; Tarkalan, where the recent discovery of Mitanni tablets has thrown new light on our knowledge of that interesting race; Dohuk and Bavian, where there are mighty bas-reliefs carved in the living rocks by Shalmanezzer, King of Assyria. For these the best centre is Mosul.

But these excavated and partly excavated cities of old time appeal to the archaeologist more than to the ordinary unimaginative person, for in point of spectacular splen-

dour they cannot be compared with the monuments of Egypt. There is one notable exception, the city and palace of Hatra, which lies eighty miles distant from the nearest railway station (Beiji) in the trackless desert. No human being dwells within its walls, and it is visited only by the wandering Badu. The palace with its storeys of chambers, its smooth limestone walls, its courts, its sculptured decorations and its stairways, is in wonderful preservation, and so little is known of the Parthians to whom it owed its architecture and civilisation, that one can look forward keenly to the time when this once prosperous and flourishing city, which defied two Roman Emperors in its heyday and only fell to the great Persian Shahpur through the treachery of a woman, will yield its as yet inviolate secrets to the excavators.

If we turn south again, there is another lonely palace in the heart of the desert, but of later date by more than half a thousand years. It is reached in an hour and a half by taxi from Karbala, by way of the lovely oasis of Shithatha. Its date is deputed, some authorities placing it before and others immediately after the Muslim conquest. Whenever it was built, the immense fortress-place must have been constructed by workmen possessing Sassanian traditions, and the mortar they employed was so strong that the three-storeyed building has held together, as if it were of solid rock. The topmost storey, it is true, has almost disappeared, but the two lower constantly shelter nomads and their flocks when they come to this water-fed place for pasture.

I have by no means finished the enumeration of all the sites which would interest travellers keen on the story of the past, but I must not dwell on these to the exclusion of the living and equally engrossing present. First, I would place the three great cities of Iraq—Baghdad, Mosul and Basrah. The bazaars or suqs of Baghdad are famous, and, as in Damascus and other Eastern cities, shops of a kind are clustered together; copper-smiths in one suq, saddlers in another, silk merchants in another, and so on. Here one can purchase rugs from Persia and Turkey, saddle-bags, embroideries, and the shimmering silk mantles worn by the women of Baghdad, veiled and unveiled, not to speak of copper pots and bowls of charming shape, and objects of silver inlaid with antimony, which are the special craft of the Subbas—the Mandaicans. Just without the town there are the desert tombs of the Sufi saints, the shrine of Abu Hanifa, the great Arab jurist, and the tomb called that of the Sitt Zobeidah, the Arab wife of Harun al Rashid. An excursion must also be made to the suburb of Kadhimain, which is a place of pilgrimage for all good Shiah Muslims, as here, beneath the gold-plated domes and minarets of its great mosque, the "two Kadhims" (the 7th and 9th Imams) lie buried.

Mosul is even more interesting, and a good deal more picturesque than Baghdad. When one has visited all its mosques, some of them, like the Great Mosque, of considerable interest and beauty, and gone to see Nineveh, and the curious little Turkoman Mosque and village of Nebi Yunus (the Prophet Jonah)—which most aggravatingly covers a buried Assyrian palace—one can make from it any number of fascinating excursions. In a matter of a day one can reach (by taxi again) the devil-worshippers' shrine in the hills, or visit some of their villages in the plains. From Mosul one can visit the eagles'-eyrie monastery of Rabban Hormuzd (spending the night at the convent of Al Kosh, near the village where the prophet Nahum is buried); or another monastery of equal antiquity—Mar Behnam. Both the mound of Nimrud and Mar Behnam may be taken in on the drive to Kirkuk, where there is a good hotel and a train service to Baghdad. On the way one passes another mound-city famous in ancient times and continuously inhabited since the dawn of history—Arbil, the Assyrian Arbela, seat of the famous shrine of the war-goddess Ishtar of Arbela. In Kirkuk and Arbil the Kurdish element is predominant, and the Kurdish "blood,"

swaggering along under a huge turban, an arsenal of weapons stuck into the voluminous belt wound round his waist, is a striking figure. Kirkuk, like Arbil, has its citadel high above the plain, on an artificial mound, in which city lies on city. Its ancient name is believed to be Arrapha (the Biblical Ararat). A stone bridge unites the older city of the mound with a modern quarter, but the bazaars of the mound will delight those in search of colour and costume.

Basrah, the third big city of Iraq, cannot compare with the two others in actual interest, but it has a beauty peculiarly its own, and its lagoons and canals bordered by date-palms have given it the name of the Eastern Venice.

Next to the three big cities come the Cities of the Shrines:—Najaf, lying like a casket within its walls in the brown desert; Karbala, surrounded by pleasant gardens; and Samarra. Two of these are reached by railway, and Najaf is about two hours from Karbala station. I have already mentioned Kadhimain, the fourth place of pilgrimage. The life of all these shrine cities is centred about the tombs of the Shiah martyrs, and the mosques which have been built around them. All have domes and minarets overlaid with gold, and in all of them one can see brought to perfection the elaborate art of the Persian tile-maker. Yet each of them is start-

Iraqi Arabs.

lingly different from its fellows. Najaf, the desert city in which Ali, son-in-law of the Prophet, lies buried, is a congeries of crowded ways and deep subterranean passages, a city where fanaticism is rampant and intrigue has ever been rife. Karbala, smiling oasis, standing in the midst of green places and mosquito-breeding swamps, becomes a place no traveller should visit in the month of Moharram, for it is here that the slain Hussain is buried, and weeping devotees during the season of mourning bewail his death with increasing frenzy. Samarra, the third town, on the old German Baghdad railway, holds the hope of the Shiah world, for the twelfth Imam is said to have disappeared in a cellar beneath the great Mosque, and it will be in Samarra that he will reappear again as the Mahdi and lead Islam to its final triumph and glory. At Samarra, too, are the ruins of Eski Baghdad—the city to which the Caliphs transferred their court in 836 A.D., only to forsake it half a century later.

Space fails me, although I have not even mentioned the hill cities of Kurdistan, the reed cities of the marshes in the south, the desert tribes, or the date harvest! But perhaps I have written enough to convince those whose hearts are set on the golden road of travel that airways and desert transport have brought Iraq, once so remote and inaccessible, within a few days of the fogs and frosts of Northern Europe, and that once there, the railway and the taxi make it easy to visit places that were until recently all but unknown, and only visited by travellers of the most adventurous and intrepid type.

PALESTINE

The British Achievement in Palestine

The visitor to Palestine usually makes his journey in what may be called an historical sense; he goes, that is, to see places that are famous in Jewish, Christian, or Muslim history. It is the sense of the past that stimulates (or occasionally depresses) him: he listens to voices across the bygone centuries.

But it is possible to catch a whisper of voices of future centuries. Palestine would be worth a visit, if only its history during the last twelve years were known. And here may be taken the opportunity of emphasising the British achievement in the Holy Land. This is not the place, nor is it our inclination, to dwell on politics. For at the best politics have been made possible by, are even an excrescence from, the freeing of the Holy Land from the Turks by the British: in their most favourable aspect they are but part of the British achievement. It was by the fulfilment of highest duty—and this is a fact which no perspicacious visitor to Palestine is likely to forget—that British forces wrested the way from Dan to Beersheba from the cunning hand which had held it for so long; and it is Britons, primarily, who have been fashioning the processes of life in this historic country for the ten years since the War.

What has been done? First, there is security. Not so long ago, Bishop McInnes, Anglican Bishop in Jerusalem, was ambushed in his motor car, and his chauffeur was killed; but this unhappy incident really illustrated, rather than contradicted, the statement that public security exists in Palestine. It was the exception that proved the rule. And when it is realised that, unlike the neighbouring countries of Syria or Egypt, for example, Palestine has no soldiers on its soil (the Royal Air Force being the only Imperial arm therein) is it not adequate proof that British prestige is high, that the British sense of justice is generally respected?

Secondly may be taken the development of communications. It is a commonplace to point out that, whereas before the War there was hardly a motor-car in Palestine, now the roads are so good that the country teems with cars. One can motor from Dan to Beersheba in a day, from the Mediterranean to the Jordan in a few hours. In the last year or two, moreover, there has been a very considerable improvement in the condition of the roads of Palestine. Nor can any but the hyper-sensitive find fault with the excellent railway system which the Palestine authorities took over from the British military authorities: the Railways are one of the features of the Holy Land. Comfort is admittedly a relative term, but in what other lines in the Middle East can the visitor find such

comfort as he enjoys between, say, Kantara and Jerusalem? As for telephonic communication, it is admirably easy.

In the early days of the Military Administration in Palestine strange tales were told of the eccentricities or unreliability of telephonic communications, or, rather, of telephone operators; but now it is a justifiable boast that, although operators have to know the three official languages of the country—English, Arabic, and Hebrew—the system approaches perfection. The frequent maker of trunk calls in England is in fact apt to be pitied by his *vis-à-vis* in Palestine!

These two things, public security and facility of communications, must impress even the most casual traveller in Palestine. He will, however, not fail to observe the great improvements that have been made in matters pertaining to hygiene, education, justice, and so on. The combat against such things as malaria, locusts, and ignorance, goes on steadily though unobtrusively; but each of these several battles is in its own way really spectacular. Nor is it unreasonable to suppose that there may be even more striking developments in these directions in the near future. The Administration of Palestine, even with the limited funds at its disposal, is doing more, very much more, than the observer of any one particular aspect of Palestine's life is always ready to admit.

To some extent, naturally, the rate of the development and progress of Palestine must depend upon the development of the "Jewish National Home" in the Holy Land, even if only from the point of view of the revenue of the Jerusalem Exchequer. In such a small country as Palestine, which records so sensitively the good or ill fortunes of other, particularly of neighbouring, countries, there must inevitably be ups and downs. Now during the last few years there has been one of these "downs," but the panic that appeared to assail certain interested quarters was imperceptible in the Palestine Administration, which kept on an even keel in the sure faith that the clouds would break. It is not too much to say that the clouds have now broken. Emigration from Palestine of new colonists still continues, it is true; but the corner of the depression has been turned. A spirit of restrained optimism now begins to reign, a spirit surely engendered by the steady advice of the British officials in charge, who are determined to make a success of their job. Certain industries in Palestine, of course, have made the giving of such advice easier. One need but refer to the orange industry, which is well known, to the cement industry (the exports of the Nesher Company of Haifa, for example, were almost four times as much last year as in 1926), or

THE JEWISH COLONIAL TRUST

to the growing tobacco industry. Such well conducted industries as these have an incalculably steadying influence in times of crisis, which are always liable to recur.

But one does feel that it is because of the tightness of the British officials' grip upon the realities in Palestine, their devotion to duty as they conceive it, that the mandate for this well-loved land, so far from being a futile or a wasted effort, will redound in history as one of the finest examples of British administration and enterprise.

That much more remains to be done is granted. Some

of it depends upon the Land Survey, which will not be completed for perhaps another dozen years: some of it depends on moneys which may or may not be forthcoming. But that Great Britain is resolved to make of Palestine a credit to her civilisation is a fact which will become increasingly obvious to the increasing number of visitors to the Holy Land. If present signs be a criterion, the economic development of Palestine with the spiritual or humanising impetus of the Briton may be adopted as the country's "slogan."

Agriculture in Palestine

The Importance of the Orange

While the exploitation of the Dead Sea salts, the construction of a pipe line to Haifa, and a port at that centre, together with the Rutenberg electrification scheme may combine to make Palestine one day a land of industrial activity, the country remains at the present time—despite the development of numerous industries of greater or lesser importance—a region in the main dependent on agriculture, as it has been through the centuries from the beginning. But the chief agricultural development of Palestine has not been on the lines of other countries whose wealth lies in the soil. Considerable areas are devoted to food crops, such as wheat, barley and dura, and, while Palestine imports wheat flour on a large scale, she is an exporter of both barley and dura. The development that has been going on in this branch of agriculture is clearly shown by the trade statistics for 1927, when there was a decrease in the imports of wheat flour of £P55,372, while there was an increase of £P58,087 in the exports of dura and one of £P34,420 in respect of the exports of barley. (This year the food crops have been a failure, and Palestine, in consequence is importing wheat on a large scale.) It is, however, fruit cultivation that has given Palestine agriculture its importance, and has provided the country with its chief export—the Jaffa orange. The importance of this product to Palestine is shown by the fact that in 1926, out of exports of a total value of £E1,308,333 the orange was responsible for £E566,194, while in 1927 out of £E1,899,759 the orange figured for £E798,762. It represents, in fact, between one-third and one-half of the export trade.

In the circumstances it is not surprising that the predominant tendency should be to concentrate on orange growing, and that year by year there should be an increase in the area devoted to this fruit. It is believed that the trend in the direction of fruit-growing generally is likely to become more pronounced as time passes, and in view of past experience it is impossible to say that this policy will be wrong. The present area under orange groves is approximately 70,000 dunums, or about 17,500 acres, of which about 30,000 dunums represent Jewish groves. The rate of increase may be gathered from the fact that at the end of 1922 the area under oranges was 32,000 dunums, while at the end of 1926 it was 42,000 dunums, or, roughly, 10,000 acres. In the last two years there has been, therefore, an increase of about 75 per cent. Palestine, it must be remembered, is only a small country, and it is significant that already its production of oranges is larger proportionally than that of any other country. The total area on which it is estimated that oranges can be grown is 280,000 dunums, or 70,000 acres, so that the land still available for planting amounts to 210,000 dunums, or 42,500 acres, and this area may be added to considerably as a result of reclamation schemes. If, however, the present estimate be accepted as the final limit for orange groves it will be sufficient to raise the exports

to over five million cases on the basis of recent statistics, and that, on the basis of the 1927 trade figures, will mean an addition to the value of the export trade of about £P1,991,900.

The War had a serious effect on the orange groves, and in the year following the Armistice the exports were roughly only one-fifth of the total for 1913-14, which was 1,553,861 cases. With the exception of the 1925-26 season the tendency has been for the exports steadily to rise. For 1926-27 the total was 2,213,983 cases, and for the current season it is estimated at over 2,000,000 cases. It may be taken for granted that in the immediate future there will be a steady increase in the exports, always provided, of course, that the weather conditions are not unfavourable for the groves, as was the case in the 1925-26 season. A recent development is that growers are no longer content to rely wholly on oranges, which take a matter of six to seven years before they begin to yield fruit, but now plant their holdings with a proportion of other fruit which comes to maturity sooner. The advantage of this course is obvious, as it means that the assets of the grower, to use a Stock Exchange phrase, are not now "frozen" for quite the period that would otherwise be the case. The fact that it is realised that it is no longer essential to rely solely on oranges has naturally had a favourable effect on the cultivation of the orange, for those who could not have contemplated an undertaking which took so long to yield a return are able to take a different view if the period of waiting can be considerably curtailed.

As in the case of all agricultural produce, the profits derived from the orange are bound to vary from year to year according to the yield and according to the position in the world markets. Unfavourable weather conditions in Spain may spell prosperity for the Palestine orange

Jaffa: A street scene.

grower, and a glut on the market will have the adverse effect. To judge by the statistics since the War, however, while prices have differed considerably from year to year, the average return has meant that an orange plantation is a very profitable undertaking. The extensions of the area under orange groves, to which reference has been made, speak for themselves.

The Jaffa orange, popular as it is, is only one of several

The Dome of the Rock,
Jerusalem.

important fruit products of Palestine. The water melon also looms large in the export list, as does the almond, while increasing attention is now being paid to viticulture. The country of Palestine is particularly suitable for vine

for wine production, and the reason why there has been a change is to be found in the vicissitudes which have attended the wine industry. Developments such as the introduction of Prohibition in the United States have made a great difference to the wine industry, and the result was the development of an inclination to find some fresh outlet for the produce of the vines; hence the concentration on the production of table grapes. The result of this tendency has been an increase in the area under table grapes from 20,910 dunums in 1924 to about 50,000 dunums at the present time, the yield rising at the same time from 6,278 metric tons to 18,004 metric tons. The area under wine grapes at the present time is round about 21,000 dunums, and the production is estimated at about 3,340 metric tons. It is interesting to note that since the move to grow more table grapes the pendulum has swung more in favour of wine grapes, for new markets in the Old World have been discovered to counterbalance the loss of the New World, and great uncertainty still exists as to the possible markets for table grapes, while Prohibition is no longer the spell-working shibboleth that it was in the days of America's early enthusiasm for this cause. Thus, while given the requisite markets and the possibility of marketing the grapes in good condition, the movement for the cultivation of table grapes is likely to continue, it may be taken for granted that there will be a renewed concentration on vineyards for the production of wine.

The fruits mentioned do not exhaust the possibilities of Palestine as a producer of the delights of the table. Although Palestine may not be "a land flowing with milk and honey," yet it is obvious that the extension of fruit cultivation which is in progress will make it a country not only prosperous but very pleasant for the eye to dwell

Jaffa: the Customs House.

growing, and it scarcely needs emphasis that from time immemorial the production of grapes for wine making has been practised. The production of grapes for the table is, however, a new development, and is as yet on its trial. The real revival of vine growing in Palestine is itself comparatively recent, dating from 1882 when the Jewish colonies were founded. Before the outbreak of the War the area under vines amounted to approximately 58,740 dunums, or about 14,680 acres. Due principally to the old age of some of the vineyards, the crops for the quinquennium 1923 to 1927 showed a considerable diminution as compared with the average yield of the period 1910 to 1914, and the consequence has been that extensive replanting has been necessary. Up to about four years ago the vines were cultivated mainly

on, a land of charming groves and fascinating vineyards, with a fragrance of delightful blossoms in the flowering period and an entrancing vision of boughs heavy with fruit and vines bending under the weight of luscious bunches of grapes at the harvest periods. Industry, as we know, has its drawbacks in its masses of hideous edifices and its general effects on the scenery, and it is a satisfying thought that if that touchstone of success is brought to Palestine by means of rails and ports, and electricity, the country will have a substantial background to soften and obscure the rush and hurry of industrial endeavour, and the acres of orange groves and vineyards will serve as an abiding link between the traditions of Old Palestine and the progress which cannot be turned aside.

PERSONAL AND GENERAL

TO-DAY

December 27, 1928 (New Style).

December 14, 1928 (Old Style).

Rajab 14, 1347 A.H. of the Muslim Calendar.

Tebet 14, 5689, of the Jewish Calendar.

The Roumanian Minister has returned to London from Lugano.

The Maharao of Kutch arrived last week at Bath for the cure.

Sir James Currie arrived in England last week from America.

M. Henri Ponsot, French High Commissioner for Syria, left Paris last week on his way back to Beyrout.

Sir Charles and Lady Stewart-Wilson left England last week for the South of France.

Colonel Sir Percival and Lady Marling left London on December 20 for Egypt.

Sir John and Lady Cadman and Sir Arnold Wilson arrived in England on the Berengaria from New York.

Sir Claud Schuster left London on December 21 for Switzerland.

Sir John and Lady Bland-Sutton left London on December 20 by special train to embark at Marseilles on the P. and O. liner Mooltan for Bombay. Sir Thomson and Lady Broom will also be passengers for Auckland, and Lady Orr-Lewis for Colombo.

The British Minister in Yugoslavia was present at the opening at Zagreb, on December 19, of the exhibition of contemporary British Art, organised by the Yugoslav Society of Great Britain, in conjunction with Sir Joseph Duveen's British Artists' Exhibition.

ARMENIAN LADIES' GUILD.

The Annual Ball of the Armenian Ladies' Guild was held at the Gobelins Restaurant on December 14. On behalf of the Armenian Societies Mrs. Michael welcomed Captain and Mrs. Gracey with their son and daughter. The occasion marked the completion by Captain Gracey of twenty-five years' work in the Armenian cause, and in commemoration of it Mr. James Malcolm, President of the Armenian United Association, presented Captain Gracey with a gold watch and Mrs. Gracey with a gold wristlet watch.

NEWS IN BRIEF.

The Greek Chamber adjourned on December 22 until January 10. On December 18 it adopted the Kafandaris-Moloff agreement between Greece and Bulgaria.

The series of historical stamps issued in Cyprus on February 1 last to commemorate the jubilee of the British occupation of that island in 1878 will be withdrawn from sale on January 31, 1929, and any stocks remaining unsold will be destroyed.

The death occurred last week of Miss Eglantyne Jebb, co-founder and Hon. Secretary of the Save the Children Fund. Miss Jebb did much for the alleviation of misery in the Near East. On behalf of the Macedonian Relief Fund she visited Macedonia during the second Balkan War. In Albania a model village has been named after her—Xheba (Jebb).

Mr. Henry Bulwer Fagnani, of Pembroke Square, Bayswater, W., formerly for some years manager of the wire department of the London Branch of the United States Steel Products Company, who died on September 1, left estate of the gross value of £9,329, with net personalty £9,132. He left the gold enamelled diamond-lid snuff box presented to his father by the Sultan Abdul Aziz, also his father's decorations, including his gold medal and certain portraits, to his wife for life with remainder to his son, Captain Henry Hutchinson Fagnani, for life, with remainder to his eldest son, desiring that the said articles may as long as possible be retained in the family "and handed from son to son."

General Piola Casello, commanding the Italian Army Corps stationed at Bari, has been received in audience by King Zogu of Albania. He invested King Zogu with the collar of the Order of the Annunziata on December 16.

The death occurred last week of M. Anargyros, the Greek millionaire who in the island of Spetsai founded a public school on English lines. Over this school Mr. Eric Sloman, a former master of Rugby, was in September, 1927, appointed headmaster.

The Greek Parliament has passed the first reading of the Bill restoring to Sir Frederick Halliday's British-trained Towns' Police the criminal investigation department which General Pangalos transferred to the State gendarmerie.

The death is announced of Mr. Cecil Torr, of Wreyland, Dartmoor. He was a writer of singular charm and individuality. Among his travels he had visited such places as Moscow, Damascus, Sparta, and Granada; and among the books that he wrote there is a delightful one upon Rhodes.

The Muslims of Western Thrace have presented a petition to the local authorities asking the Greek Government to reject the proposal of certain of their fellow-countrymen to introduce into the schools Latin characters, as contrary to the Quran and the Muslim faith.

The death is announced of Brigadier-General Cecil Edward Rice. General Rice was the fourth son of Lt.-Col. Cecil Rice, who fought in the Crimean and Indian Mutiny. He himself fought in South Africa, and, in the Great War, in Gallipoli and France and Egypt. In 1918 he was Chief of the Imperial School of Instruction in Egypt.

Sir Alexander Blackie William Kennedy, F.R.S., of The Albany, Piccadilly, W., consulting civil and electrical engineer, for some years Professor of Engineering in University College, London, who died on November 1, aged 81, left estate of the gross value of £90,909, with net personalty £90,103.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

British Enterprise in the Near East.

The Supplement which we publish this week is notable for the fact that it covers those regions in the Near East where in the past British enterprise has been specially to the fore and where it is obvious that there will be special opportunities in the future. In Egypt the many Nile works are an abiding tribute to the worth of Great Britain's contribution to civilisation—the latest of the works to be undertaken, the Nag Hammadi Barrage, which is being constructed by Sir John Jackson, Ltd., is the subject of an illustrated article—while in the Sudan one need only mention the Makwar Dam at Sennar, the great Gezira scheme of the Sudan Plantations Syndicate, and the development of Port Sudan. In Iraq there is the development of the oilfields to come, with which this country is so closely identified through the Anglo-Persian Oil Company, to say nothing of the pipeline and the railway which will link up Iraq with the Palestine coast at Haifa, and in Palestine the works of development to come include the exploitation of the Dead Sea Salts and the projected harbour at Haifa, an undertaking linked up, of course, with the pipeline and the railway. As explained in the Supplement, the Nile contract works programme is still a long way from completion, and it may be hoped that in the carrying out of the remaining projects British enterprise will be as much to the fore as in the past. It is a gratifying and satisfactory thought that in the case of all four countries British trade is well to the front, and it is a fact worth placing on record that in the case of three of the countries Great Britain is the principal purchaser of what is in each case the country's staple product.

Turkish Bondholders and the Settlement.

It would be futile to suggest that the Turkish Debt settlement is satisfactory from the bondholders' point of view, and the dissatisfaction felt with it was given due emphasis in Lord Banbury's speech which, in his absence, was read at this week's meeting of the bondholders (a report of which will be found elsewhere in this issue) by Mr. R. M. Holland Martin. Lord Banbury's advice was that the bondholders should give adhesion to the contract, "not because we like it, not because we think it a good arrangement, but solely because it is the best we have been able to obtain." The point for the bondholders, however, is that it is a settlement, even if it is unsatisfactory, and it offers them a prospect at long last of receiving something instead of being spectators at long-drawn-out negotiations. As is known, the Turkish ratification of the agreement was made with certain reserves. On this point Lord Banbury was not very encouraging, for he pointed out that these reserves, "disquieting additions to what was already a very complex situation," was his description of them, might lead to further contentions in the future. It can only be hoped that this will not be the case, and that the agreement will be carried out smoothly. One reason in favour of this is that Turkey has undoubtedly come off very lightly. It was pointed out at the meeting that the annuities only represent ten per cent. of the Turkish Budget, as compared with a ratio of 30 per cent. before the War, so that Turkey's post-War sacrifices are not on a plane with those of the other countries who took part in the struggle. A second and very important reason why Turkey should observe the agreement in the letter is that, as was emphasised by Mr. S. C. Wyatt, who has suc-

ceeded Sir Adam Block on the Council of the Ottoman Public Debt, the Turkish Government is really making strenuous efforts in regard to financial and other reforms. It has to be remembered that it is imperative that Turkey should obtain financial assistance from abroad, and the Turkish rulers are not likely to be blind to the fact that any further action which has an adverse effect on the country's credit will make it impossible for them to approach the foreign money markets with any hope of success.

Windbreaks in Cyprus.

The need for the formation of a series of windbreaks in the Messaoria is discussed by Mr. F. S. Danks in an article in a supplement to the *Cyprus Gazette*. The Messaoria is a broad plain which runs across the Island from Fama-gusta in the east to the bay of Morphou on the west and has a breadth of from ten to twenty miles. Good grain crops are produced on a part of the plain, but most of the area is waterless, and in consequence poor crops are forthcoming. Mr. Danks points out that the formation of areas of shelter-woods or windbreaks would greatly increase the fertility of the protected areas. Such a scheme would require the establishment of a chain of nurseries, and in Mr. Danks' view this cannot be realised for some years. The present position with regard to tree planting can be gathered from the fact that the Forest Department issues from 90,000 to 100,000 tree seedlings each year, but this only represents a third of the demand.

The Rubber Position.

With the past week's addition to the London stocks the rubber industry may be said to have passed another milestone and to have entered the last stage of the process which, it may be hoped, will put it again on its feet before many months have passed. Restriction ended on November 1, but it has taken all of six weeks before the freedom of exports has had time to affect the stocks here. We can now anticipate large increases, week after week, until the accumulated stocks have been used up, and that must mean lower prices for the commodity and for the shares. If one could tell with reasonable accuracy how much rubber there is to be exported, then it would be a comparatively simple task to work out how long it will be before the pendulum begins to swing in the direction of higher prices; but there is considerable uncertainty in this respect.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 21.

Without being in any way sensational, the Stock Markets have experienced a certain amount of activity in the moderately priced industrials this week, while a firm tone has been visible in other markets, without much business being done. Chief interest has been excited by the opening dealings in the new Ford shares at anything up to 21s. premium, mainly on support from New York. Molasses and Mond Nickel have also been outstanding favourites, and engineering shares have been firmer as a result of the merger announcements. Little change has been seen in gilt-edged, but some of the prior charge stocks of the home railway companies have risen as a result of better traffics. Dealings commenced on Monday in the new Greek Loan at a discount, which adversely affected the older Greek issues, but a recovery was seen later. There has been a more confident tone in the Money Market following the better tendency in the New York and Berlin exchanges. It is hoped that the outflow of gold which has lately been causing anxiety may be diminished.

The Rand Mining Dividends.

On the whole the distributions of the Witwatersrand companies for the second half of 1928 have not been such as to inspire enthusiasm. It is true that in two cases the rates, although showing no increase upon those in respect of the first half of the year, achieve record totals, the companies concerned being the Government Areas with a total of 90 per cent. and the New Modder with 140 per cent. Another of the Eastern Rand enterprises also makes a good showing with 10 per cent., as against $7\frac{1}{2}$ per cent. six months ago and the initial payment of 5 per cent. But the Crown Mines' total is only 55 per cent., as against $67\frac{1}{2}$ per cent. for 1927. The City Deep—a company with a capital of over a million and a quarter—has been making losses practically all the year, while in the case of the Robinson Deep the earnings are again insufficient to permit any distribution on the ordinary shares. One of the less important undertakings, the Simmer and Jack, has lately been reporting improved developments and increased profits. In view of the former feature the earnings of this year and of next are to be devoted to additions to the plant.

Boot and Shoe Companies.

The negotiations for an important fusion in the boot and shoe trade have at last led to a definite agreement, and Messrs. J. Sears and Co., (makers of "True-Form") are to acquire the 99 per cent. interest in the Preferred and Deferred capital of Freeman Hardy and Willis, which was recently bought by the Charterhouse Investment Trust. Both companies are large concerns engaged in manufacture as well as distribution, and their profits have

shown consistent progress in recent years. The popularity of ready-made, as opposed to made-to-measure, goods of late years has nowhere been more apparent than in boots and shoes, and companies that have been in capable hands have been able to take advantage of this popularity. The ordinary dividend of J. Sears and Co., has been maintained at $22\frac{1}{2}$ per cent. free of tax, for the last three years, the increase in profits being allocated to reserve and to increasing the carry forward. The Ordinary shares return only £3 10s. per cent., so that the market has somewhat discounted the benefits that may be expected to accrue from the amalgamation, but on recent earnings the $12\frac{1}{2}$ per cent. Cumulative Preference shares, which are well covered, yield £6 per cent. Lotus Ltd., first formed as a distributing concern but now a complete manufacturing and distributing enterprise, has also had increasing profits in the last few years, and the interim dividend for the current year has been raised from $2\frac{1}{2}$ per cent. to 3 per cent. Profits, though still low in comparison with the boom years of 1922-3, rose from £49,130 in 1925 to £66,200 in 1927. The last balance sheet disclosed a strong liquid position. The 7 per cent. Cumulative Preference shares, which are the first charge on the company's profits, yield £6 11s. per cent.

Engineering Merger.

Those who have preached the advantages of co-operation and amalgamation between producers in our most depressed industries have at last reason to believe that their teachings are sinking home. The announcement of the great amalgamation scheme proposed by Vickers, Vickers-Armstrong and Cammell Laird is therefore not only interesting in itself, but as evidencing growth in a development which is likely to be of even greater importance in 1929 than it has been in the second half of 1928. The three firms propose to turn over the whole of their steel interests, with the exception of those concerned with guns, gun mountings, armoured cars and tanks, but including the making of armoured plates, to a new company, the English Steel Corporation. Vickers and Cammell Laird will also amalgamate their railway car-

(Continued on page 805.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, December 31).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 9).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, December 29); s.s. Warfield for Bombay and Karachi (London, January 19).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool January 19, Glasgow and Swansea January 18).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26). (The first sailing of the season to the Danube ports of Galatz and Braila.)

P. and O. Line.—S.s. Ranpura for Bombay (London, January 4); s.s. Bangalore for Calcutta (London, January 5).

Prince Line.—S.s. Highland Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 29); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 10).

Ellerman and Papayanni Lines.—S.s. Kyno for Gibraltar, Malta, Alexandria, Jaffa, and Haifa* (Liverpool, December 29); s.s. Trentino for Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 5, Swansea January 5); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool January 5, Swansea January 10). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*BRITANNIA ...	Dec. 31	*Elysia ...	Jan. 29
*Assyria ...	Jan. 11	*Tuscania ...	Feb. 12

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

MEETING OF TURKISH UNIFIED BOND-HOLDERS.

Adhesion to Contract Recommended.

A meeting of Turkish Unified Bondholders, called by the Council of Foreign Bondholders, was held on December 19 at Winchester House, Old Broad Street, E.C.

Mr. R. M. Holland Martin, C.B., who presided, said that Lord Banbury, who was to have taken the chair, was unfortunately unable to attend. He would read the speech prepared by Lord Banbury, which was as follows: As you all know, the contract for the settlement of Turkey's share of the old Ottoman Public Debt, which was signed *ad referendum* on June 13 this year, in Paris, was ratified by the Turkish Grand National Assembly on the first of this month, subject to certain reserves with which I shall deal presently.

A first interest payment is due to be made this month, and Bondholders who present their coupons for such payment thereby signify that they accept the contract. If the holders of 40 per cent. of the total nominal capital of the Long-term Loans, the Lottery Bonds, and the Treasury Bonds signify their adhesion, the contract will enter into force, and we have therefore asked you to come here this morning in order that you may understand exactly what such adhesion entails.

We recommend you to give your adhesion to this contract, not because we like it, not because we think it is a good arrangement, but solely because it is the best we have been able to obtain. Whether, if the Bondholders give their adhesion, it will be carried out, depends on Turkey's good faith, but the fact that after nearly four years of the most difficult and laborious negotiations Turkey has attached to her ratification certain reserves which may lead to further contentions in the future, makes the prospect neither encouraging nor assuring.

As regards the contract itself, I wish first of all to emphasise that it only deals with Turkey's share (approximately 67 per cent.) of the nominal capital of the old Ottoman Public Debt, and you must bear in mind that the percentages referred to in it are fractions of that 67 per cent.

Secondly, by adhering to this contract, you relinquish all your old rights under the Decree of Mouharrem and the Decree Annex, and in the case of further default by the Turkish Government, you will be unable to reclaim those rights. In any case they have already been forcibly expropriated by the Turkish Government.

Thirdly, the annuities which Turkey undertakes to pay are comparatively small, starting, as you see, at two million Turkish gold pounds and only reaching three million four hundred thousand in 1952. It therefore takes twenty-three years to reach the maximum annuity, by which time, owing to the ample provisions for amortisation by purchase at low rates, nearly 90 per cent. of the Bonds will have been amortised.

Arrears of Interest.

The Unified has a preferential scale of interest payments starting at 47 per cent. and reaching 100 per cent. in 1949. The arrears, which in the case of the Unified are the unpaid balance of the coupons from March, 1915, to September, 1922, and the coupons due between March, 1923, and March, 1924, inclusive, are to be converted at 75 per cent. into Non-Interest Bearing Bonds, redeem-

able in 30 annual fractions, each fraction being only entitled to payment of a percentage, which, for the first seven years, is fixed at 38 per cent. and rises gradually until 100 per cent. is reached in 1952. The 5 per Cent. Treasury Bonds of 1911 and 1913 and the 6 per Cent. of 1912 are to be consolidated, the two former at 99 per cent. and the latter at 107 per cent. into 5 per Cent. Consolidated Treasury Bonds 1928.

Now I wish to come to the reserves made by the Grand National Assembly. Under the Decree of Mouharrem, a reserve fund was established, and the Decree Annex states that it is to be used to meet any deficiency of the assigned revenues. As Turkey has been in default, the fund has become the property of the bondholders, who, in the spirit of conciliation they have manifested throughout, agreed to credit Turkey with 62 per cent. of it, it being understood that the balance would be credited to the other States in due proportion. Turkey now claims, not merely her share of this fund, which is to be used for the two initial payments to bondholders, but the whole of it, on the ground that the Treaty of Lausanne only apportioned the liabilities of the Ottoman Empire, and not the assets.

Another fund is the Tripoli Fund, which was created from the amount paid by Italy when Tripoli was annexed, and which represented the cash paid on account of Tripoli's share of the Ottoman Public Debt. This fund is also regarded as available for the credit of all the States, but Turkey again claims, not only her share, but the whole of it.

There is a third fund which concerns the Lottery Bonds, but I need not bother you with the details of it, beyond mentioning that Turkey claims the whole of this also.

These reservations, as well as a further one in connexion with a currency dispute, do not appear to have any direct relation to the decision which you will have to make, and can only be regarded as disquieting additions to what was already a very complex situation. We feel that in the contract as it was submitted for ratification we had reached the utmost limit of concession, and we have so notified the other representatives of the bondholders. I will take this occasion to make public expression of the gratitude felt both by the Council and the Committee towards Sir Adam Block for the great struggle which he made to obtain better terms for the bondholders. As you know, he resigned his position on the Debt Council early this year, and Mr. S. C. Wyatt was appointed in Sir Adam's place.

Objections to Contract.

Mr. D. Reid (the secretary) said that, briefly, the chief objections to the contract that had been raised at different times in the Committee were that the annuities in it only represented 10 per cent. of Turkey's current Budget, as compared with a 30 per cent. ratio before the War—a very low proportion of post-War sacrifice compared with other countries. Further, the bondholders had no practical supervision of the assigned revenues, and in case the currency became depreciated, payments might be suspended. Other objections were that the autonomy of the Debt Council had been very seriously impaired by the provision for joint meeting with a new body, whose interests might conflict with its own, and which had a numerical preponderance; and that the provision for amortisation by purchase at low rates was so ample that when the interest payments for the Unified Debt reached 100 per cent. in 1949, nearly 90 per cent. of the Bonds would probably have been amortised. It was further objected that the general provision in the contract for arbitration in case of dispute might be inoperative in the event of Turkey claiming that the question at issue touched her "sovereign rights."

Mr. S. C. Wyatt said that, while fully appreciating and understanding the effect of past experience on bondholders' present feelings, he thought that they should not overlook the serious efforts which undoubtedly were being made by the present Turkish Government in respect of financial and other reforms. The application of the principle of balancing the Budget without recourse to loans for the purpose was an important innovation. These efforts during a period of transition were being watched and followed sympathetically by other nations, and he felt that they should credit the Turkish Government with the desire and the intention to carry out the contract in spirit as well as in the letter, and they looked forward to the day when, as a consequence of fulfilling the obligations, Turkey's credit would be re-established.

The proceedings terminated with a vote of thanks to the chairman and other members of the Committee.

(Continued from page 804.)

riage and wagon interests. It is a good feature of the scheme that the steel and rolling stock interests are being separated, for rationalisation should mean the amalgamation of like concerns only. The steel agreement is probably the more important, as it is hoped to induce other firms to amalgamate with the new company. As is well known the depression in the heavy industries has been extremely severe and all the concerns involved have been passing through bad times. The amalgamation will, it is hoped, bring about such economies in management and production as will enable the industry once more to compete in foreign markets on profitable terms. If it succeeds the future position of shareholders in these concerns will be better than it has been for some time past.

Motors and Motoring

By G. B. B.

A Wonderful Motor Cycle Tour.

One of the most extraordinary cycle tours ever undertaken was that which was commenced in March, 1927, by Mr. A. de A Lima, from Loanda, Portuguese West Africa. He started off through the Belgian Congo and into the Sudan, reaching Khartoum rather more quickly than he had hoped, and from there he rode through to Cairo, thence to Palestine, Syria, and Turkey, through Greece and part of Albania, then through Yugoslavia and Italy, through Austria and up into Belgium, through France, across the Pyrenees and by way of Spain to Portugal, covering 18,000 miles in eighteen months' riding. This was, I think, an excellent, if not wonderful, performance, and it speaks well for the machine he rode, which was built at the famous Raleigh works, Nottingham. It gave no trouble throughout the ride, although the route lay through swamps, bush country, and across deserts and mountains, where frequently there was nothing resembling a road. I am not sure what tyres he used, but judging from the way they seem to have lasted, I expect they were Dunlops.

Valves.

There is sometimes a tendency for valves to stick, and where that is noticed nine times out of ten the owner or the mechanic, as the case may be, who is seeing to the fault jumps to the conclusion that the guide wants reaming out to give more clearance. It is very seldom that this is the case; indeed, a moment's reflection should show that there is no mechanical reason why a hole through which metal is working, should grow smaller instead of working larger. The more probable cause of the trouble is either that the valve stem has become slightly bent or that the guide is out of line. An accumulation of carbon in the guide, due to there being a little too much clearance, will cause the trouble.

Valve tappet clearance is a question about which there is some little argument. It involves valve action and also noise; much of the noise and rattle about an ordinary, well-used car, is due to valve clatter through too great a tappet clearance space. Loss of engine power is often due to the same cause. There are mechanics who are fond of giving their views as to the amount of valve tappet clearance that should be provided. Generally speaking, it is wisest to ignore altogether what they say. There is a best setting, and only one, for valve tappet work and that given by the makers may be taken always as being correct. As the tappets wear and the valve length alters through grinding-in, etc., the tappet clearance should be

altered accordingly. With adjustable tappets that is an easy matter.

Clearance between valve stem and tappet provides for two conditions. One of these is expansion of the valve stem from heat during operation, and the other is a settling of the valve due to wear of the valve face and the valve seat due to repeated grinding. In some cases the makers' recommended clearance is with the engine cold, in which case both conditions are taken into account during the setting of the valve tappets. If the tappet clearance is given as having to be so much when the engine is hot, then expansion or lengthening of the valve stem through heat has to be taken into consideration. Too little clearance is dangerous, because if the stem keeps the valve off the seat during the compression and power strokes, the valve will be scored and burned by escaping gases and trouble will inevitably result.

A Coach De Luxe.

I have just received particulars of a new design of road coach which, it is claimed, represents the last word in luxury. The roof is so constructed that there is ample luggage space in readily accessible lockers over each seat, and there are also shelves for carrying light articles, which are of mahogany and are almost as wide as an ordinary seat, so that they will hold travelling rugs or suit cases without difficulty. They are suspended from the roof by polished metal rods connecting to side rails running full length of the apartment. Access to the luggage compartments is obtained from the aisles. The construction permits full head room for even tall passengers, and, by reason of the roof arrangement, the windows can be raised instead of lowered, going up into the hollow roof. Windows in the doors drop entirely into the door wells, actuated by raising and lowering mechanism. While the side window effect is carried round the rear, with curved glass at the corners, the back windows are stationary. At the rear edge of the roof a metal awning is provided, which can be raised or lowered for the passengers' comfort, and the electric lighting scheme is claimed to be one of the most extensive and effective yet introduced.

A Capital Question.

The question whether a car is worth any more after a complete overhaul than it was before was asked me by an accountant recently, and my answer was "yes," but the accountant pointed out that the usual method of handling the cost of a complete overhaul is to charge it into expense at the time it occurs, and that the books of the man or firm owning the car do not show any increase in assets although the car, admittedly is worth more practically if not financially. What the accountant meant

was that the cost of a complete overhaul is so large, relatively, that when it is charged up in the month during which the work was done, it throws the costs for that month far out of line with those of other similar periods and, secondly, that the wear and tear which made the complete overhaul necessary was spread over the entire period when overhauling was unnecessary. Put in another way, the cost of the depreciation was spread, or should be spread, over six, twelve, or twenty months, as the case might be whilst that of putting it right was thrown on a single month. Put in that way it does not seem right. In my friend's opinion, the cost of the complete overhaul should be similarly distributed uniformly over the period between overhauls instead of being charged in full in the figures for the month during which the overhauling was carried out.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 19:—

Egyptian Futures.

Sakel Contract.—Values in this market have been maintained at a steady level throughout the week, the "bearish" influences of restricted trade support and continued poor reports from fine spinning centres being outweighed, for the time being, by the firmness displayed in Alexandria. We have admitted previously that manipulation of the Sakel contracts is not a difficult proposition this season, but we consider that the present movement is premature; holders at some period or other have to unload on to the trade, and, as far as this country is concerned, Sakel premiums have been so dear since the commencement of the season that fewer mills are now tied to this variety than ever previously. The fact that the local contract has, for a considerable period, run at a heavy discount with the producing market and on this account has, to a large extent, lost its usefulness either as a hedge to the importer or an adequate cover to the spinner, has latterly caused a lot of discussion amongst Egyptian houses here. A scheme is under consideration whereby it is hoped by slight modification in certain clauses and a limitation of the varieties tenderable, to re-establish a more definite relationship with Alexandria values. The matter will probably be brought forward officially in the immediate future, and we feel sure will meet with the approval of the majority engaged in this section of the business. For the next week or two the customary seasonal lack of interest will probably persist and little change in values is to be anticipated; however, should any material advance materialise, we think the opportunity might be utilised to enter into moderate commitments on the short side.

Upper Contract.—Only a moderate business has taken place in this market during the past week, the majority of transactions consisting of transfers of straddle interests of near positions to the later summer months. These operations have forced fairly wide premiums, but so much cotton has been imported here below a tenderable basis that further pressure is likely to be experienced before the position becomes really attractive to those prepared to handle actual cotton.

Trade support throughout the week has only been on a moderate scale and spinners appear to be amply covered for the time being. Generally speaking, we still consider that the Upper varieties are moderately reasonable and purchases in easy markets should later on prove profitable.

Egyptian Spot.

Business in actual cotton has been rather quiet on the whole, especially for the native Egyptian growths. This state of affairs is, of course, normal for the time of the year, and it is, therefore, all the more satisfactory to note that during the last day or two spinners have shown a tendency to acquire a little more cotton prior to the holidays. This policy to our mind is a sound one, as very often the lowest prices occur round about the end of the year. Although futures have been remarkably steady during the week, spot cotton has been inclined to ease slightly.

The demand for Sakel cotton has shown no change in character. Seventy-five per cent. has been for the "off" and "low" qualities,

which we should be inclined to quote as "10½d. to 11½d." and "16d. to 18d." respectively. A limited inquiry for cotton at from 50 to 150 on has been in evidence, but anything above the latter price has been practically ignored. Uppers have continued in favour at from 25 off to 25 on, but competition has become extremely keen, as may be seen by the fact that to-day quotations of F.G.F. and below in Upper were reduced by three points. Stocks of Upper are rapidly accumulating here, and much of it is of the bright but "woolly" quality, which, on account of the difficulty experienced in effecting ready sales, invariably finds its way to the contract sooner or later. Heavy tenders are expected in January. Pilon continues to attract attention in certain quarters. There is not a large stock of it here, and we should not be surprised to see the basis harden shortly. Fancy growths have been neglected this week. The improvement in the off-take for Sudan Sakel has been well maintained, but Tokar has been difficult to move.

C.i.f. business appears to be very quiet, and it is difficult to obtain a correct view of what is really happening. Forwardings of the trade last week reached the large total of 10,697 bales Egyptian and 4,932 bales Sudan. Estimated spot sales for the week, 1,200 bales Egyptian and 1,850 bales Sudan. Quotations of Sakel show a net decline of 15 points; Uppers, 23 to 28 points; and Pilon, 20 points. F.G.F. Sakel to-day, 19.35d. F.G.F. Upper to-day, 12.22d. F.G.F. Pilon to-day, 12.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 13, state:—

Since our last report the futures market has been very active and the tone generally firm. The week's summary of price movements is as follows:—Sakellaridis: January, 38.49 dollars, 1.05 dollars up; March, 38.98 dollars, 1.11 dollars up; May, 39.17 dollars, 1.02 dollars up; November, 38.65 dollars, 0.47 dollars up. Ashmouni: December, 23.05 dollars, 0.40 dollars up; February, 23.44 dollars, 0.27 dollars up; April, 23.82 dollars, 0.25 dollars up; June, 24.22 dollars, 0.25 dollars up; October, 24.78 dollars, 0.33 dollars up.

Sakel.—The market during the earlier sessions of the week was strong and excited under speculative manipulation. The publication of the fifth American Bureau Report on the 8th inst., however, announcing a figure larger than that generally expected, brought out liquidation sufficient to wipe out most of the advance which had been registered in the earlier part of the week. The reaction was, however, short lived, as with New York sending better advices the speculative element again took hold, and their heavy purchases soon restored to the market the strength temporarily lost. The American Bureau Report of the 8th inst. estimated the probable production at 14,373,000 bales, against 14,133,000 bales last month and 12,789,000 bales at this time last year. Last year's final crop figure was 12,783,000 bales.

The demand for the trade has continued to decline, and has been extremely poor for the last two or three days. The movement in the interior continues to fall off, but it now seems almost sure that the Sakel crop this year will reach about 2,500,000 kantars. While it is naturally too early yet to advance even the most guarded opinion as to the acreage which will be planted next year, it may be taken that if the present difference between Sakel and Ashmouni should be maintained for a few weeks more, it will be only natural to expect some increase in the acreage planted to Sakel.

Rumours have been circulated on the market that the Sudan Sakel crop had been damaged by fogs. These reports were immediately contradicted, and latest advices report that the crop is making satisfactory progress, with good prospects for a production appreciably larger than that of last year. Taking the situation as a whole, we think present Sakel prices rather exaggerated, in view of the fact that there is still plenty of cotton to be placed, and this in the face of an increasing tendency on the part of spinners to replace Sakel by other and cheaper growths. The market is narrow, and clever manipulation can push it higher temporarily, but it is inevitable that prices must sooner or later fall back to reasonable levels if the marketing of the balance of the crop is not to be seriously impeded.

The Sakel/Uppers straddle (January/February) this week stands at 1,505 points, against 1,427 points last week and 743 points at this time last year.

Uppers.—This market has also been very active, but fluctuations have not been on the same scale as for Sakel. Business has for the most part consisted of trade purchases, which were supplied by speculative sales, the latter in their turn being put out against speculative purchases of Sakel. The Uppers market seems to us to be fundamentally sound, and, as we have stated in previous reports, we look for a gradual advance in prices as stocks are moved.

The Ashmouni/American straddle (February/January) this week stands at 326 points, against 283 points last week and 756 points at this time last year.

At the second December tender, dockets for 3,750 kantars were issued, bringing the total tenders so far this month up to 6,000 kantars.

M. Mironescu, Roumanian Minister for Foreign Affairs, states that a loan will be concluded in January.

Palestine's imports and exports during September amounted in value to £P584,746 and £P82,292 respectively, as compared with £P452,433 and £P102,036 in September, 1927.
